Responsibilities

- Successfully installed, upgraded, and troubleshot Ubuntu, Windows 10, and Windows 11 operating systems to ensure optimal performance.
- Established VPN connections and resolved VPN client issues, enabling secure remote access.
- Provided basic network support, addressing DHCP, DNS, and gateway-related issues.
- Proficiently managed MFA processes and permissions, enhancing security protocols.
- Created, configured, and maintained Amazon EC2 virtual servers, ensuring scalability and availability.
- Managed AWS resources using CloudWatch, Elastic IP, Security Groups, and other AWS services.
- Scheduled snapshots, implemented load balancing, auto-scaling, and managed VPCs for AWS infrastructure.
- Collaborated with development teams using version control systems like GIT, GITHUB, and GITLAB.
- Demonstrated cross-platform expertise in Linux, Windows, and macOS environments.
- Configured and optimized nginx, Apache2, and IIS servers, including SSL certificate setup.
- Proficiently managed databases including MySQL and MongoDB.
- Set up staging servers for .NET, Node.js, Angular, and Python, facilitating development and testing.
- Maintained production servers for Python applications, ensuring high availability and reliability.
- Python Automation in AWS using Boto3.
