Summary

Dedicated Software Developer with a background in developing custom applications. Skilled in system integration, application performance optimization, and database development, collaborative team player with excellent technical abilities offering 2.6 years of related experience.

Work Experience

Sr. Engineer, Tata Elxsi, Bengaluru

June 2021 - Present

- Having 2.6 years of experience in IT.

Frontend Development:

- Develop the user interface that visually presents test cases based on set-top box modules.
- Ensure the UI is user-friendly, responsive, and adheres to design guidelines.
- Implement interactive features for selecting individual and multiple test cases.
- Integrate the user interface with the set-top box modules to retrieve test case information.

Backend Development:

- Create a user interface that allows users to upload both single and multiple Excel files
- Implement file-handling mechanisms to manage bulk uploads efficiently.
- Implement data validation logic based on the provided specification.
- Develop a server-side scheduler that triggers weekly auto-validation of uploaded Excel files.
- Implement email notifications to inform users and administrators about the validation results.
- Implement FTP (File Transfer Protocol) integration to retrieve large Excel files from various systems.

Projects

SKY SERVICE CENTER SUPPORT

July 2021

STB diagnosis software (Ethos) is used to test various STBs which reaches the service center for repair, this software is used to test many scenarios.

[Python Object-Oriented Programming\(Linkedin\)](#)
[Python Data Structures and Algorithms](#)
[Hacker Rank Python Certificate](#)
[Hacker Rank Java Script Certificate](#)

Languages

English

Hindi

Kannada

It can be used to test STBs in 3 different modes.

1. Automatic 2. Diagnostic 3. Font-panel.

Environment & Software : Visual Studio Code, MS SQL server, GIT, Python, SQL Server

Responsibilities :

- Working on enhancements.
- Debugging and analysis of issues.
- Implemented Test cases for Llama model
- Implemented UI for adding device details and user input.
- Designing, Developing and Testing applications and providing UAT and Production support after deployment.

SKY ONTRACK

November 2021

Ontrack is a web application which acts as a method to achieve the business routines of sky broadcasting company, It is a supply chain management tool.

It deals with the following features.

1. Shipment 2. Manufacturing 3. Purchasing 4. Forecasting.

Environment & Software : Visual Studio Code, MS SQL server, GIT, C#, HTML, CSS, JavaScript, SQL Server

Responsibilities :

- Primarily working on UI design and Backend development and meeting the customer requirements.
- Worked on bug fixing
- Worked on uploading and downloading on xlsx file.
- Developing ASN file upload validation process.
- Understanding current system functionality and client's requirements and implementing the solutions for External DB handler service.
- Development of External DB handler service to automatically upload files to external system and send email notification.

Bank Application

June 2023 - July 2023

"I'm excited to present a personal project born out of 2.3 years of hands-on experience. Leveraging technologies like React, Redux, Python, Django, and SQL Lite, I've crafted a compact web application that emulates the functionality of a banking application. This creation boasts essential features such as Deposit, Withdraw, and Transfer.

I've gone the extra mile by hosting this project, making it accessible for you to explore firsthand. You can check out a live preview of it right here: [Project Preview](#)"
