Ab Initio/ UNIX/ Oracle Professional with around 5 years of experience

HIGHLIGHTS

- **Primary Skills:**
 - ETL Technologies: Ab Initio, Gde, Co-op, EME
 - Programming Languages: SQL
 - Databases: Oracle 10g/11g
 - Scripting Languages: UNIX Scripting
 - Scheduling Tools: Autosys, Control-M
 - Tools: SQL Developer, SQL*Plus, Putty, Tectia
 - Data storage system: Hadoop Distributed File System (HDFS)
- **Additional Skills:**
 - Operating Systems: MS Windows 10, Linux Ubuntu, UNIX

SUMMARY

- Strong data warehousing experience using ETL tool **AB Initio**.
- Extensive programming skills in **Ab Initio** ETL tool, **Oracle**, and **UNIX Shell** programming.
- Experience in working with various heterogeneous source systems such as **Oracle and Flat Files**.
- Experience in creating and maintaining **Ab Initio** graphs using various components such as Join, Rollup, Reformat, Filter by Expression, Scan, Lookup, and Partition components.
- Knowledge in using air commands and front-end utilities for check-in/ check-out.
- Experience working on utility commands such as m_db, m_dump, and m_eval.
- Excellent knowledge in data warehousing and relational database concepts.
- Good understanding about fact and dimension tables.
- Experience working on databases such as **Oracle** to pull data and load DB tables.
- Strong knowledge of tables, views, materialized views, and sequences.
- Expertise in writing the **UNIX Shell Scripting** for automating the things.
- Well-versed in development of complex graphs and **UNIX** wrapper scripts.
- Be familiar with the specifics of the major file transfer protocols (FTP,SFTP and NDM) as well.
- Proficient in understanding business processes/ requirements and translating them into technical requirements.
- Excellent communication, interpersonal, and analytical skills, and strong ability to perform as part of a team.

EDUCATIONAL QUALIFICATION

- Bachelor of Technology (ECE) from JNTU University, Anantapur

PROFESSIONAL EXPERIENCE

- Working as Ab initio Developer in Mphasis Limited from Nov-2021 to Till Now.
- Worked as Ab Initio Developer in IRIS Software Pvt. Ltd from Jan-2019 to Aug-2021.

PROJECT EXPERIENCE

Project 1: MBODS Exit

Feb'22-Till date

Client: JP Morgan Chase & Co.

Role: Ab Initio Developer

Description: This Project has different services like MAI(mortgage acct inquiry), MHR(mortgage history read), Fastpay, SFR, LTO. In the current architecture, the MSP data(from Black knight) is processed via abinitio jobs and are stored in various MBODS tables(or can say MBODS hadoop entities) from where they are consumed by different consumers. So our project's goal is to get MSP src files and process them directly via spark jobs and store them in S3 from where the consumers use data.

Responsibilities:

- Preparing the analysis document to understand the Spark team.
- Involved code migration to different environments.
- Verifying/validating the Source files that arrived from the source system.
- Actively participated in requirements analysis, discussing the Mapping defects.
- Actively participated in Data validation, job run status, tracking the log files through the web EME.
- Worked with Partition Components like Partition-by-key, Partition-by-expression, and Partition-by-Round Robin to partition the data from serial file.
- Prepared Run books, delivery presentations, and participates in meetings.
- Worked with File transfer components of ab initio like SFTP component.
- Used Lookups with Reformat Component to fetch matching records based on for the downstream process.
- Extensively performed Transformations of source data with Transform Components.

Environment: Ab Initio, Unix, MS SQL Server, Putty, Control-M

Project 2: OPT ETL Re-write

Nov'21-Jan'22

Client: JP Morgan Chase & Co.

Role: Ab Initio Developer

Description: OPT ETL project uses ETL process to send notifications to customers either by email or mail. It receives files from various applications, after data validations, cleaning it applies the data to the letter templates and sends for printing or email. OPT ETL re-write project aims converting its legacy ETL Jobs running on Ab-initio, informatica to new Spark jobs to run on Kubernetes.

Responsibilities:

- Involved code migration to different environments.
- Verifying/validating the Source files that arrived from the source system.
- Actively participated in requirements analysis, discussing the Mapping defects.
- Actively participated in Data validation, job run status, tracking the log files through the web EME.
- Worked with Partition Components like Partition-by-key, Partition-by-expression, and Partition-by-Round Robin to partition the data from serial file.
- Prepared Run books, delivery presentations, and participates in meetings.
- Worked with File transfer components of ab initio like SFTP component.
- Used Lookups with Reformat Component to fetch matching records based on for the downstream process.
- Extensively performed Transformations of source data with Transform Components.

Environment: Ab Initio, Unix, MS SQL Server, Putty, Control-M

Project 3: TIMS (Treasury Investment Management System)**Dec'20-Aug'21****Client:** CITI Bank**Role:** Ab Initio Developer

Description: Treasury Investment Management System (TIMS) is a globally normalized data repository of all active trades, related hedges and MIS tickets persisted on a daily basis. The application is utilized by Citi Treasury Investment (CTI), which is a functional unit of Citi's corporate treasury for managing firm's liquidity pools

Responsibilities:

- Understood the functional requirement documents
- Responsible for business requirement and analysis from business users
- Involved in check-in and check-out of the Project
- Performed transformations of source data with transform components such as Replicate, Denormalize, Redefines, Reformat, Filter-by-Expression, Rollup, Scan, and Join
- Wrote UNIX Shell Scripting for automating the things
- Involved in daily meeting for discussing about defect fixes
- Checked whether all the functionalities are met or not as per the requirement
- Designed test scenarios for unit and system testing
- Worked on Autosys to create new jobs, calendars and VM's.

Environment: Ab Initio, Oracle, Unix, Putty, Autosys**Project 4:** Disclosure of Interest (DOI-SPIDER)**Jan'19-Dec'20****Client:** Citi Bank**Role:** Ab Initio Developer

Description: Disclosure of Interest (DOI) project is related to the disclosure of security positions for regulatory purpose. Regulations relating to DOI differ in almost every country in terms of the type of position covered, range of products, threshold for disclosure and method of position aggregation as per regulatory requirement.

SPIDER is an application used to have a single, systematically controlled source of complete and accurate equities and equity related position data for use by all regions/countries globally in order to accurately report on the firm's disclosure of interest for regulatory reporting requirements.

Responsibilities:

- Attended Business/Tech design meetings with stake holders to understand the requirement.
- Prepared tech design document for Functional requests.
- Developed new graphs or enhanced existed graphs to meet the requirements.
- Performed E2E unit testing to cover all test case scenarios
- Worked on graph tuning to improve the performance
- Worked on creating tags for objects and involved in deployments.
- Prepared release note document for all object changes.
- Ran the batches across all env's for testing.
- Prepared automated UNIX scripts to perform diagnostics on server.
- Prepared automated Unix script to clean up servers on timely manner
- Involved in Unix server upgrade activities like RHEL6-RHEL7
- Worked on Autosys to create new jobs, calendars and VM's.
- Involved in POC's to check the possibilities of implementing other ETL technologies in project.

Environment: Ab Initio GDE (3.5.2 & 4.0.2.4), Autosys, Putty, SQL Developer, Tectia
