OBJECTIVE

Analytical minded Engineer interested in the Position of Devops Sound Knowledge Production Support and Devops concepts. Innovative team player with passion for Continuous learning.

SUMMARY

- Skilled Aws(Linux) / Devops Engineer with 7 years of experience as IT Engineer in Maintenance and Production Support, Systems engineer, **Devops, AWS/Azure, Production Support Engineer, Application Support**, and Network Operations Center (NOC), IT Infrastructure Services (Incident, Change and Problem Management).
- Working on **Devops / Application Support/Monitoring** for the applications hosted on **LINUX/UNIX** server and **mysql** database.
- Responsible for providing **L3 Support** to the Web Based application/Monitoring.
- Streamline Change execution in Prod and dev across environment.
- Streamlining L3 & Change Run team as per process.
- Discuss with internal/external customers to consult on technical solutions, issue resolution, and implementation assessments.
- On boarding applications, providing training and performance evaluations on a regular basis.
- Configure **Aws** resource as (**Ec2, Vpc, Security Groups, IAM, ELB, Route 53**) using Terraform.
- Managing release for different application by coordinating with multiple teams.
- Implementing release through test and production environments using Jenkins.
- Maintaining **git-github**, repos and giving access to dev team.
- Create branches and requesting for PR to merge to Master.
- Attends release handover call and understand the changes and requirement.
- Doing sanity checks for any new changes in both test and production after deployment.
- Raising change request and following for approval from different team before the production release.
- Managing production issues and handling outages after deployment.
- Continuous Integration & Deployment of applications using **GIT, Maven, Jenkins** Creating Master/Slave configuration to distribute load on Master Jenkins node.
- Building and provisioning infrastructure through Terraform.
- Putting code and tests into automated CI/CD pipelines and making infrastructure more accessible to application developers
- Managing/Provisioning **S3/EBS/EFS** file system compute as per traffic trends in Amazon AWS.
- Worked on Amazon EC2, Amazon S3, Amazon RDS, VPC, Route 53, Elastic Load Balancing, Auto Scaling, Cloud Watch.
- Build Servers using AWS: Importing volumes, Launching EC2, RDS, creating security groups, auto-scaling, load balancers (ELBs) in the defined virtual private network.
- Monitoring AWS services EC2, s3, ELB, Auto Scaling, RDS through cloud watch. Enabling automated backups to improve database performance on RDS.
- Configured various performance metrics using AWS Cloud watch & Cloud Trial.
- Uploading data from EC2 to S3 using AWS CLI commands.
- EBS volumes, Snapshots, AMI's.
- We create **Docker** images and write **Docker files** which facilitate rapid delivery and reduce the time to deploy new application containers.
- Managing container using container Orchestration tools **kubernetes** (AKS)
- Written various Lambda services for automating the functionality on the Cloud.
- Maintained the user accounts (IAM), RDS, Route 53, VPC, Dynamo DB, SES, SQS and SNS, EKS, Cloud Migration, ECS services in AWS cloud.
- Analyzing and troubleshooting of issues in Production environment and resolve the issues before SLA.
- Working under **ITIL process** (ticketing, status reporting, monitoring, support and maintenance)
- Checking logs of applications and rectify according to requirement.
- Hands on Experience in maintain **Apache tomcat/Java** Application Services.
- Deployment and troubleshooting of JAR, WAR & EAR files in domain and cluster environment.
- Experience on **SSL** certification up gradation.
- Involved in System Monitoring and Morning Sanity Check & providing support to the client on 24/7 basis from offshore.
- Experience in deployment of patches/application on prod server in very short down time.
- Deployed applications in various environments like Development, System Test QA and Production on multiple **Tomcat & Apache Servers**.
- Monitoring logs using Cloudwatch.
- Troubleshooting Various Problems in different stages of development using log files.
- Monitoring & resolving all the tickets according to severity in our queue using Service now.
- Change tickets for supporting other upstream and downstream application activities.
- Monitoring servers/application Health and taking appropriate action to resolve the issue.
- Working experience in **LINUX/UNIX Environment**.

- Working experience on LINUX Python
- An excellent team player with good interpersonal skills, commitment, result oriented, hard working with a quest and zeal to learn new technologies and undertake challenging tasks.
- Install and Configuring MySQL, and Mongo DB Database Server.
- Installing and configuration of Red Hat Enterprise Linux servers.
- File system Administration, Managed Disks and File systems using LVM on Linux.
- Troubleshooting Day-to-Day issues with various Servers on different platforms.

TECHNICAL SKILLS

Continuous Integration tools	Jenkins, Jenkins pipeline
Databases Server	MySQL, MongoDB
Operating System	Linux/Unix, Ubuntu 18.04
Web Application server	Apache, Tomcat
Monitoring Tools	Nagios
Scripting	Python
Ticketing Tool	Service Now and Azure Sprint
Other Tools used	Putty, WinSCP, Moba-xstream
Cloud Environment	AWS
Devops Tools	Jenkins, GitHub, Nexus, Terraform, Docker, Kubernetes

WORK EXPERIENCE

- Worked as **Technical Lead** in **HCL Technologies Pvt Ltd** from Jan 2022 to May 2023.
- Worked as **Devops Engineer in WebMaazix Solutions Private Limited** from initially starting my work as a cloud engineer in August 2017 to August 2019, after that I moved on to Devops engineer from August 2019 to January 2022.
- Worked as **Linux System Administrator** in **Supreme Computer Education** from **June 2015 to July 2017**.

PROJECT EXPERIENCE

Project # 4

Company Name	: HCL Technologies Pvt Ltd
Project Title	: RICOH
Client	: JAPAN
O/S Used	: Ubuntu
Duration	: Jan 2022 to May 2023
Technology	: Aws/Azure/Terraform/Git/Pipeline/Kubernetes/IaaS/Linux/Windows

- Working as Technical Lead for HCL Technologies.
- Handling a team of 5 people and distribute the tickets and helping them to take the appropriate action.
- Involve in migrating HCL applications from on-prem to Aws Cloud.
- Create migration plan and distribute the work among the teams to complete it before cutover.
- Coordinating with different team to complete pre-requisites like Infrastructure provisioning, Build creation, port opening request, Infosec approval, Monitoring configuration.
- Creating pipeline and making changes to existing pipeline. Deploying application through pipeline jobs.
- Build and configure a virtual data center in the Azure Web Services cloud to support Enterprise Data Warehouse hosting including Virtual Network (VNET), Public and Private Subnets.
- Designing and implementation of public and private facing websites on Azure Cloud.
- Migrating from On-Premise Infrastructure to Azure Cloud.
- Championed in cloud provisioning tools such as Terraform.
- Configured and managed various Azure Services including VM, NETWORKING, VNET, Storage Account, app_gateway, key vault, PostgreSQL, sqldb.
- After deployment checking the logs and doing the application and verifying everything is running fine.
- Creating and changing terraform code to deploy infrastructure, pushing the code using Azure Devops to repository.
- Preparing status report every day on the migration and provide it to Manager. Also present the status and make them understand what is the blocker and suggest for solutions.

- Deploying and managing Kubernetes application servers and troubleshooting issues related to nodes/pods by validating logs.
- Automated the process of creating python script import boto3 using Aws service like EC2 instances by triggering
- Worked on python to automate manual and repetitive tasks
- Written python script to automate build process, generate report and send an email to managers about status of daily builds and weekly builds.
- Modified and tuned existing python scripts. Written scripts to make my life easier in the work Performed build and release of all software cycles engineering, test, production, update, patches, and maintenance. Wrote python scripts in make, bash to automate the build release processes. Debugged build failures

Project # 3

Company Name	: WebMaazix Solutions Private Limited
Project Title	: Kullishi
Client	: USA
O/S Used	: Ubuntu
Duration	: Aug 2019 to Jan 2022
Technology	: Aws/Terraform/Git/Pipeline/GitHub/kubernetes/IaaS/Linux/Windows

- Deploying services and application in java /Aws services and using Jenkins CI/CD pipeline.
- Changing build and release pipeline YAML code and push to GitHub. Create the PR and seek for approval to merge Master.
- Configure Cloud Watch Monitoring tools.
- Build and configure a virtual data center in the Amazon Web Services cloud to support Enterprise Data Warehouse hosting including Virtual Private Cloud (VPC), Public and Private Subnets, Security Groups, Route Tables, Elastic Load Balancer.
- Designing and implementation of public and private facing websites on AWS Cloud.
- Migrating from On-Premise Infrastructure to AWS Cloud.
- Championed in cloud provisioning tools such as Terraform.
- Configured and managed various AWS Services including EC2,VPC, S3, Cloud Watch, Cloud Front, and Route 53 etc
- Written various Lambda services for automating the functionality on the Cloud.
- Used AWS Route 53 for configuring the High-Availability and Disaster recovery to make the environment up and running in case of any unexpected disaster.
- Provide on call support during business hours and health checks for all critical applications/services.
- Changing YAML pipeline script.
- Ensure for any technical issues Aws and git and GitHub.
- Collaborate with System Owner to ensure knowledge transfer on upcoming projects are synced and cascaded to team.
- Raising change request and following for approval from different team before the NPRD/PROD release.
- Be the point of contact when it comes to technical escalations.
- Record and track team SLAs and workflows.
- Installed and configured Nagios as monitoring tool for disk usage, CPU utilization, list of open files etc. and sending alerts to our teams based on the same.

Project # 2

Company Name	: WebMaazix Solutions Private Limited
Project Title	: Teriforia
Client	: UK
O/S Used	: Linux
Duration	: Aug 2017 to Aug 2019
Technology	: Aws/IaaS/Linux/Ubuntu/Windows

- Build and configure a virtual data center in the Amazon Web Services cloud to support Enterprise Data Warehouse hosting including Virtual Private Cloud (VPC), Public and Private Subnets, Security Groups, Route Tables, Elastic Load Balancer.
- Designing and implementation of public and private facing websites on AWS Cloud.
- Migrating from On-Premise Infrastructure to AWS Cloud.
- Configured and managed various AWS Services including EC2,ELB,RDS, VPC, S3, Cloud Watch, Cloud Front, and Route 53 etc.
- Configured various performance metrics using AWS Cloud watch & Cloud Trial.
- Written various Lambda services for automating the functionality on the Cloud.

- Maintained the user accounts (IAM), RDS, Route 53, VPC, Dynamo DB, SES, SQS and SNS, EKS, Cloud Migration, ECS services in AWS cloud.
- Create AMIs for mission critical production servers for backup.
- Installed and configured Nagios as monitoring tool for disk usage, CPU utilization, list of open files etc. and sending alerts to our teams based on the same.
- Support, Upgrade & Modification, Install, Migration, Maintenance and Trouble Shooting, handling critical Incident Management Tickets in Production, Handling Change Management Tickets on installing/upgrading new snaps of applications.
- Worked on python to automate manual and repetitive tasks.

Project # 1

Company Name	: Supreme Computer Education
Project Title	: Domestic Project
O/S Used	: Linux and Windows
Duration	: June 2015 to July 2017
Technology	: Aws/Linux/Ubuntu/Windows

- Providing full support for the infrastructure environment.
- Handling tickets and resolving all open requests in a day.
- Service Desk Ticket handling.
- Using Apache, Apache Tomcat, LAMP and Deploying Project.
- Managing and Installing Linux and Windows Operating System.
- Yum Server and Client Configurations.
- User Administration, sudo privileges and Packages management.
- Yum Patch management, Log Files.
- Handling rack space, Amazon-EC2 Cloud Server, Elastic load balancing.
- Whm Panel, go daddy and Client c-panel.
- Managing Tomcat, FTP, APACHE, SAMBA servers.
- Deploying Application using shell script commands.
- Automating system administration tasks using corn job.
- Managing and Monitoring server using Nagios tool.
- Configuring and Managing Cyberoam integrated security. Full control of Cyberoam firewall.
- Managing the local Area Networking and systems and troubleshooting the System hardware, networking issues, cabling and cleaning.
- Managing users, group and Packages management.
- Creating a repository for every Project and provide the read and right access for the users in Subversion.
- Install and Configuring MySQL, Mongo DB Database Server.
- Responsible for SVN and Database Storage Backup, Patch Management.
- Installing and configuration of Red Hat Enterprise Linux servers.
- Configuration of troubleshooting DNS, DHCP and LVM.

EDUCATION

MBA (Information System), (Anna University of Technology) SNS College of Engineering, Coimbatore in 2011 Secured 78%
B.SC., (COMPUTER SCIENCE), (Bharathiar University Coimbatore), SRMV College, Coimbatore in 2009 Secured 65.3%

DECLARATION

I do hereby declare that the particulars of information and facts stated herein above are true, correct and complete to the best of my knowledge and belief.

Place: Bangalore.

Yours faithfully,

Date:
