Project #2 : -

Title : Suyoga Mobile Application.

Organization : Suyoga Software solutions.

Team Size : 6

Environment : Java, spring boot, STS, MySQL.

DESCRIPTION: The main aim of this project is selling the Groceries and Vegetables directly from the Farmer to Consumers using the Suyoga Mobile application. Suyoga works based on postal codes. Every Pin code has our vendors deliver the order items to the consumers. This will help the Consumers to get the Organic Vegetables directly from the Farmers. In this app users are able to order available Products. In this app users can pay through online or COD. We Are Given both options to pay. After Register the Consumers are able to Order available products.

Project #1: -

Title : Kissan Mobile Application.

Environment : Java, spring boot, STS, MySQL, Angular

DESCRIPTION : The main aim of this project is collecting the Groceries and Vegetables directly from the Farmers to avoid local markets and brokers. Usually farmers get less amount compared to city amount per/kg, moreover he needs to transport the products to market he needs to pay transport charges and he only needs to pay commissions to the market persons. So our Kissan app works to avoid the transport and mediators and collect farmer products from the agricultural land. Farmers need to update available products in the Kissan app. Kissan works based on postal codes.
