- 6) IVR Flexfony
Language: - Laravel
Database: - My SQL
URL: - <https://ivr.flexfony.com/>
Description: - It is a type of IVR model in which three types of users are Admin, Reseller and Client. It is a type of promotional model by which the client can make a call for promotional and transactional. And there is a special option in this click to call agent can talk to the client without showing his personal number. Interactive voice response is a technology that interacts with multiple callers through the phone networks. The callers interact with the IVR systems through voice or by pressing keys. The system helps the customer perform the desired task anytime and from any corner of the earth. You will be able to get information that you want like flight scheduled, issues related to bank and many other things. With the help of IVR service you can also use collection of data while carrying a survey.
- 7) CRM Flexfony
Language: - Laravel
Database: - My Sql
URL: - <https://ivr.flexfony.com/>
Description: - This is a small part of a CRM that I have built alone, we can put leads, reports, every report, and complete work flow. Customer relationship management (CRM) is a technology for managing all your company's relationships and interactions with customers and potential customers. The goal is simple: Improve business relationships. A CRM system helps companies stay connected to customers, streamline processes, and improve profitability.
- 8) OBD Flexfony
Language: - Laravel
Database: - My Sql
URL: - <http://obd.flexfony.com/>
Description: - A technology in which pre-recorded messages are automated to mobile/telephone users called as Voice SMS or Outbound Dialer (OBD). One can dial out list of phone numbers and play prerecorded message through voice SMS or Outbound dialer (OBD). To quantify result of voice SMS marketing, it provides touch tone inputs from end users. To create a personal touch with customers, most of the businessmen choose voice SMS marketing or campaign.
- 9) Yourivr

Language: - Laravel

Database: - My Sql

URL: - <https://yourivr.in/>

Description: - It is a type of IVR model in which three types of users are Admin, Reseller and Client. It is a type of promotional model by which the client can make a call for promotional and transactional. Interactive voice response is a technology that interacts with multiple callers through the phone networks. The callers interact with the IVR systems through voice or by pressing keys. The system helps the customer perform the

desired task anytime and from any corner of the earth. You will be able to get information that you want like flight scheduled, issues related to bank and many other things. With the help of IVR service you can also use collection of data while carrying a survey.
