Education

Aravali Institute of Technical Studies

Bachelor of Technology

Udaipur, Rajasthan

Oct. 2020– June 2023

Aravali Institute of Technical Studies

Diploma

Udaipur, Rajasthan

Aug. 2017 – Oct 2020

Experience

Java Backend Developer

Globe Active Technologies Ltd

March 2023 – Present

Bengaluru, Karnataka

Skills

- Proficient in Java programming with hands-on experience building robust and scalable applications. In depth exposure to Oop's Concept & **Core Java 8** features.
- Skillfull in handling **HTTP** methods, status codes and various request/response formats, including **JSONS**.
- Proven track record in designing and implementing **Restful API'S**, adhering to industry best practices for web services.
- Expertise in utilizing **Spring Boot** annotations.
- Strong proficiency in **Hibernate** for efficient Object-Relational Mapping (ORM) in Java applications.
- Experience with Hibernate annotations, entity relationships, and **Hibernate Query Language(HQL)**.
- Skilled in relational database management, including the design and optimization of database schemas.
- Proficient in working with databases such as **MySQL** and **PostgreSQL**.
- Proficient in using **Git for Version Control**, with expertise in branching, merging, and collaborative development.
- Familiar with Maven and Gradle for effective dependency management and building of Java applications.
- Skilled in creating clear and concise documentations for the API'S using **Swagger**.
- Experience in writing comprehensive unit tests using **Junit**.
- Proficient in developing dynamic web pages using **JSP** for server-side rendering. Skillful in integrating JSP with Java components and data-driven web applications.
- Hands on experience in **Servlet** Programming for handling HTTP requests and producing dynamic web content.
- Proficient in managing session handling and servlet life cycle for building Java-based web application.
- Expertise in implementing security measures in Spring applications using **Spring Security**.
- Proficient in **authentication and authorization** mechanisms, including the integration of custom authentication providers.
- Skilled in implementing **JWT** bases authentication and authorization for secure communication between service.
- Developed a **REST API** using and PostgreSQL to store data from learning management systems.

Projects

WMMS | *Core java, Advance java, Spring-Boot, Hibernate, API, SQL, Microservices*

March 2023 – Present

- Implemented and maintained the WMMS project, including modules such as Dashboard, Organization Manager, Customer Manager, Billing Manager, Payment Manager, Maintenance Manager, Inventory, Customer Portal, and Report Generation.
- Utilized Spring MVC, Spring Boot, Hibernate, and other backend technologies to develop a scalable and efficient system.
- Collaborated with cross-functional teams for successful API development and integration.
- Played a key role in the design and implementation of microservices architecture.
- Utilized Model Mapper for efficient data mapping and implemented the Repository pattern for data access.
- Implemented date and time functionalities using Java's Date Time API.
- Managed SQL databases, ensuring optimal performance and data integrity.
- Utilized Spring Boot for rapid development and deployment.
- Integrated Hibernate for efficient database operations.
- Employed RestTemplate for making HTTP requests and consuming RESTful APIs, ensuring smooth communication between different components of the system.
- Managed and optimized PostgreSQL databases for efficient data storage, retrieval, and maintenance. Ensured data integrity and implemented complex queries for reporting and analytics.
- Implemented the Repository pattern to abstract data access, promoting a clean and modular code structure.
- Leveraged Java as the primary programming language, ensuring robust and scalable backend logic.
- Implemented pagination strategies in the WMMS project to enhance the performance and user experience & to efficiently manage large datasets, resulting in improved page load times and reduced server load.
- Enhanced troubleshooting and debugging capabilities through comprehensive logging, facilitating rapid issue resolution.
- Integrated Spring Validation mechanisms to enforce data integrity and enhance the reliability of user inputs.
- Leveraged the power of Spring Boot Cloud to build scalable and resilient microservices architecture.

Technical Skills

Java : Core Java, Advance Java, Java 8 ,OOPs, Multithreading , Collection, JDBC , J2EE

Frameworks: Spring MVC, Springboot, Hibernate , Microservices

Web Technologies: API, Jsp, Html,Agile

Developer Tools: IntelliJ, Eclipse, Netbeans, STS-4, Postman , Version Control :Git, Testing : J-Unit

Databases : Mysql, Postgres
