

Sudarsan R (DevOps/Cloud Engineer)

Mobile: +91- 8333023030

Mail-id: rsudarsanr.93@gmail.com

Carrier Objective:

Self-motivated DevOps Engineer/Consultant seeking a challenging and value-added position in an IT organization that will allow me to directly contribute to the growth and success of an organization. Proven willingness and ability to learn new systems and adapt to changing corporate environments.

Professional Summary:

- Having **5+** years of IT Experience along with **3.10** years of Experience in Software Configuration Management (Build and Release) as a **DevOps Engineer** on **Linux distro's** environments and **Windows OS**.
- Hands-on experience in **DevOps** and Infrastructure management with automation tools.
- Strong knowledge about version control system **GIT, BitBucket**.
- Hands-on experience in **Maven** building tools for compiling and packaging the artifact.
- Excellent skills in applying Continuous Integration and Continuous Delivery processes & tools [Example: **BitBucket, Jenkins, Maven, Docker, Ansible, and Kubernetes, etc...**]
- Expertise in Installation and Configuration of Continuous Integration tool **Jenkins**.
- Good knowledge of writing pipeline scripts like **Groovy**.
- Created automated build and release environment using Continuous Integration Tools **Jenkins**.
- Daily activities include creating builds, deploying the artifacts in multiple Dev and QA environments, debugging build failures, and working with development and QA teams to resolve the same.
- Implement the **Master** and **Slave** concept in **Jenkins**.
- Experience in automation tasks using **BASH** and **Python Scripting**.
- Experience configuring and updating the servers using **Configuration Management** tool **Ansible**.
- Good experience in **Ansible** by using Ansible to Automate IT Infrastructure and control and manage their infrastructure.
- Good experience in **Ansible Playbooks** with **Ansible roles**. Used file module in Ansible playbook to copy and remove files on remote systems.
- Setting up the Public and Private repository for complete infrastructure.
- Hands-on experience in integrating the **Jfrog Artifact** repository with the Jenkins pipeline.
- Good experience in writing **YAML** scripts.
- Experience in Agile development, DevOps models with Agile methodologies (Scrum), and cross-functional teams.
- Virtualized the servers AWS using **Docker**, created the **Docker Files**, build the **Docker Images**, run the Docker Containers for using a different environment.
- Good experience on **Docker Network** and **Docker Compose**.
- Hands-on Experience with Container Orchestration Tool like **Kubernetes**.
- Experience in writing **Kubernetes** service and deployment files.
- Experience in containerizing and migrating applications to **Kubernetes**.
- Working knowledge of cluster managers: **Kubernetes/Docker**.
- Deploy the code using code built into **EKS-cluster**.
- Experience writing **Docker files** to create customized images and composing files for managing multiple containers.
- Work with Development and Testing Team to establish a build schedule, execute the builds and troubles shoot build failures.
- Responsible for code merges on a regular frequency to integrate the source code from various branches to maintain baseline code after every release.
- Managed environments **DEV, QA, and UAT** for various releases and designed instances.
- Managing version control tools, building and deploying for java-based applications.

- Experience **Terraform** provision **Infrastructure as a Code (IaC)** in **AWS infra**.
- Experience with **AWS** (Amazon Web Services) cloud infrastructures like **VPC, EC2, S3, IAM, Route 53, Load Balancer, Autoscaling and AWS CICD**.

Technical Skills

Operating Systems	Linux distro's, Windows
Version Control Tools	Git, BitBucket
Build Management Tools	Maven
Scripting Languages	Bash, Python
Continuous Integration Tools	Jenkins
Repositories	JFrog Artifactory
Monitoring Tools	Prometheus, Grafana
Databases	MYSQL
Configuration Management Tools	Ansible
Cloud Services	AWS (Amazon web services)
Containerization platform	Docker
Container Orchestration Tool	Kubernetes
Infrastructure as a code	Terraform

Work Experience:

- Worked as a DevOps Engineer in **CGI, Bengaluru** from **Sep 2022 to July 2023**.
- Worked as a DevOps Engineer in **Capgemini, Bengaluru** from **Aug 2019 to Sep-2022**.
- Worked as a **DB Admin** in **Conduent, Inc, Bengaluru** from **June 2017 to Aug 2019**.

Educational Qualification:

- **M.B.A** From **Sri Venkateshwara University, Tirupati**.

Projects Handled

Project 2:

Client: **Deutsche Bank, Germany**.

Technologies: **Jira, BitBucket, Jenkins, Maven, JFrog, Ansible, Docker, Kubernetes**

Designation: **DevOps engineer**

Duration : **Sep 2022 to July 2023**.

Roles and Responsibilities:

- Implemented and maintained version control using **BitBucket** for a team of developers.
- Worked on **branching, merging, and conflict resolution**, Experience with collaborative coding using **pull requests and code reviews**.
- Managed and maintained **Linux servers**, ensuring **high availability** and **optimal performance**.
- Installed, configured, and updated operating systems and software packages using package managers.
- Utilized **Python Scripting** for automation of routine tasks, improving efficiency and reducing manual errors.
- Designed, implemented, and maintained **Jenkins CI/CD pipelines** reducing **manual intervention, deployment time and increasing reliability**.
- Created **Jenkinsfiles** to define **pipelines as code**, enabling version control and pipeline reproducibility.
- Integrated Jenkins with **BitBucket repositories** for **automated builds triggered by code commits**.
- **Orchestrated Dockerized application deployments to Kubernetes clusters through Jenkins pipelines**.
- Automated **testing processes**, including **unit, integration, and end-to-end testing**, leading to improved software quality.

- Managed **Jenkins plugin installation and updates**, ensuring compatibility and security.
- Collaborated with **development and operations teams to troubleshoot pipeline issues and optimize processes**.
- Hands on Experience on the installation, configuration, and maintenance of Tomcat application server projects.
- Implemented **Maven-based build pipelines for Java project**, facilitating **automated compilation, testing, and packaging**.
- Set up and maintained a **private Maven repository in JFrog Artifactory**, improving **artifact sharing and reducing external dependencies**.
- Provided **technical support and troubleshooting for Maven and JFrog related issues** to development teams.
- Implemented **Ansible automation for infrastructure provisioning and configuration management**, reducing manual errors and ensuring consistent environments.
- Collaborated with development teams to **integrate Ansible into the CI/CD process**, resulting in faster and more reliable application deployments.
- Created **Ansible playbooks** to automate routine system maintenance tasks, such as **patching, backup, and log rotation, improving system reliability**.
- Worked on **Docker-based containerization strategies for monolithic applications**, reducing deployment complexities and enhancing portability.
- Implemented **Kubernetes pods, services, and deployments for containerized applications**, automating scaling and management.
- Collaborated with development teams to optimize **Docker images for size and security**, resulting in faster image builds and more secure deployments.
- Orchestrated the migration of legacy applications to microservices architecture using **Docker containers and Kubernetes**, resulting in **improved scalability and resource utilization**.
- Designed and implemented **CI/CD pipelines using Jenkins and Kubernetes**, enabling automated build, testing, and deployment of containerized applications.
- Managed a Kubernetes cluster with over 50+ nodes across multiple environments, ensuring high availability, resource optimization, and seamless upgrades.
- Utilized **Helm for managing Kubernetes application deployments**, reducing deployment time and ensuring consistency across different environments.
- **Developed custom Kubernetes Operators** to automate the deployment and lifecycle management of complex applications, increasing operational efficiency.
- monitoring and alerting using **Prometheus in Kubernetes**, facilitating proactive issue identification and resolution.
- Led the team in implementing security best practices for **Docker images and Kubernetes deployments**, resulting in enhanced application and infrastructure security.

Project 1

Client: **Synchrony Financial Services (Connecticut, US)**

Technologies: **AWS, Git, Maven, Jenkins, Docker, Ansible, Kubernetes, Terraform, Nginx, and Jfrog Artifactory.**

Designation: **DevOps engineer**

Duration: **Aug 2019 to Sep-2022**

Roles & Responsibilities:

- Expert in Cloud Technologies like **Amazon Web Services (AWS) VPC, EC2, S3, IAM, Route 53, Load Balancer, Autoscaling, and CloudWatch**.
- Worked on Multiple **AWS** instances accounts to handle **Dev & Prod** environments.
- Responsible for handling performance issues of applications deployed in the AWS environment.
- Setup and Managed **EBS backup** and recovery using Snapshot.
- Coordinate/assist developers with establishing and applying appropriate branching, labeling/naming conventions using **GIT source control**.
- Integrated **GIT** and **Maven** with **Jenkins** to implement the continuous integration process.
- Configured **Jenkins CI** tool using build tool **Maven**.
- Created **Jenkins CI/CD** pipelines with declarative pipelines using **DSL** and freestyle jobs.

- Created the **Jfrog** repositories for upload/download artifacts, third-party tools, and **DockerImages** to the repositories.
- Configured the **slave nodes** in **Jenkins** and create the users in the target servers and established communication to all servers by exchanging the keys.
- Automated the Application n build procedure and deployment using **Jenkins and Ansible**.
- Setting up **Jenkins master**, adding the necessary **Plugins**, and adding more **slaves** to support scalability and agility.
- Installing docker, writing docker files, building images, and maintaining the production application containers.
- Automation of tasks that seems to be manual and save efforts through ansible
- Written playbooks, and roles in **Ansible** and Integrated the **Ansible** playbooks with **Jenkins**.
- Coordinated with developers and managers to make sure that code is deployed in the production environment.
- Created the docker files, build, tagged, and pushed images to the private docker hub.
- Written **Terraform** scripts to provision **AWS infra (ex. IAM, EC2, EBS, S3)**
- Used **Jenkins pipelines** to drive all microservices builds out to the **Docker registry** and then deployed to **Kubernetes**, Created **Pods**, and managed using **Kubernetes**.
- Managed **Kubernetes** charts using Helm. Created reproducible builds of the **Kubernetes** applications, managed Kubernetes manifest files, and Managed releases of Helm packages.
- Deploy the code using code built into **EKS-cluster**.
- Upgrading the tools in Development and Production environment.
- Coordinating with stakeholders and solving their issues.
- Participating in grooming backlogs and retrospective meetings.
- Troubleshoot tickets or issue tracking through the **JIRA tool**
- Creating change management using the **Jira ticket tool** and submitting for the approval process.
- Updating my daily activities task in the **project management tool JIRA**.

Sudarsan Reddy R.
