JOB OBJECTIVE

Dedicated and highly skilled QA Engineer with 4 years of experience in software testing, including 3 years of expertise in Selenium WebDriver and 1 year in API testing using Postman and Rest Assured. Seeking a challenging role to leverage my testing proficiency and contribute to the quality and reliability of software applications.

PROFILE SUMMARY

- Having Around **4 Years of** experience in Information Technology, specializing in **Software Quality Assurance Testing**, proficient in testing on **Web-based applications**.
- Expertise in **Automation Testing** working on **Selenium with Java, Cucumber, TestNG, Maven, Git**
- Good knowledge & experience in **Core Java & OOPS** concepts.
- Extensive knowledge on all phases of the Software Development Life Cycle (SDLC) and different methodologies such as **Agile** and Iterative Waterfall Model.
- Extensively involved in Automation Testing in **Telecom & E-commerce** domain projects.
- Implementation of parallel execution in the automation framework to do browser compatibility testing on different browsers.
- Good Experience in API both Manual and Automation (Postman and Rest Assured)
- A major role is to analyse the business requirements, IT design documents and identify the test requirements to build a robust testbed of probable test cases and test data using various testing techniques.
- Good Knowledge in Manual Testing Concepts & SQL

ORGANIZATIONAL EXPERIENCE:

- Worked as **Test Engineer** at **SOFTLINE SOLUTIONS Pvt Ltd** from **Jan 2020 to till date**.

PROJECTS EXECUTED:

Project #1

Duration Jan 2020 to Oct 2021

Domain **Telecom Domain**

Client Inland Cellular Hidago

Designation Test Engineer

Technologies Java, Selenium, Cucumber, Junit, GIT, JIRA, Maven

Description Project was a web-based application intended to be used for capturing & fulfilling the digital services order. It is a new portal being developed to input, track, enrich and fulfil Digital (IoT etc.) orders and was developed using Pega systems. This new portal provides an End-to-End process from entering the order (Manual or upload), enriching the order details to fulfilling the order. The project is being developed using Agile Methodology and I am working as an automation tester in the project.

Roles & Responsibilities

- Analysing the requirement specification and preparation of test cases
- Carrying out GUI, functional and regression testing
- Configured Selenium Web Driver, Cucumber, Maven tool and created selenium automation scripts in java using Cucumber.
- Executing test cases to validate the functionality
- Involved in reviewing the automation script to make sure that all the scripts are error free.
- Focused on automating all the test cases in each sprint with very less manual testing.
- Created POM to store the project data and configured their details using Maven to build the project.
- Log defects using JIRA tool and communicate the defect status updates to the Dev team
- Used Jira as a repository to record all project testing efforts and to keep track of the defects
- Maintained code version using GIT
- Involved in troubleshooting and debugging the automation script.
- Designed the efficient Manual test cases based on analysis of Business Requirement documents.
- Involved in peer review meetings to ensure the coverage of the test scenarios.

Project #2

Duration Oct 2021 to till date

Domain **E-commerce Domain**

Client **Techbargains California Emeryville**

Designation Test Engineer

Technologies Java, Selenium, Cucumber, Junit, GIT, JIRA, Maven

Description Project was a web-based application intended for online retailers. The main objective of this application is to make it interactive and its ease of use. It would make Searching, viewing and selecting a product easier. It contains a sophisticated search engine for users to search for products specific to their needs. The user can then view the complete specification of each product. They can also view the product reviews and also write their own reviews. The main emphasis lies in providing a user-friendly search engine for effectively showing the desired results. Users can add their product into the cart and buy the product online.

Roles & Responsibilities

- Analysing the requirement specification and preparation of test cases
- Carrying out GUI, functional and regression testing
- Configured Selenium Web Driver, Cucumber, Test NG, Maven tool and created selenium automation scripts in java using Cucumber.
- Executing test cases to validate the functionality
- Executing previously run test cases as per document and reporting the defects to the lead
- Involved in reviewing the automation script to make sure that all the test classes are error free.
- Reviewed test Scenarios, test cases and test scripts to ensure consistency with strategic direction, goals and objectives of QA resources working on the project with Agile Scrum methodology.
- Involved in selecting the test case to be automated and make sure coverage is good.
- Used Apache POI to read data from Excel files.
- Created POM to store the project data and configured their details using Maven to build the project.
- Log defects using JIRA tool and communicate the defect status updates to the responsible analysis and implementation teams.

TECHNICAL SKILLS

Well versed with -

- Testing Tools Selenium WebDriver, JIRA
- Languages JAVA, SQL,
- IDE Eclipse, IntelliJ
- Test Framework Cucumber, TestNG, Hybrid Framework
- API Testing Tools Rest-assured, Postman, Node JS
- Build Tool Maven
- Version Control GIT
- Processes Agile-Scrum, Waterfall
- CI Tools Jenkins
- Databases Oracle
- Web Technologies HTML, XML
- Operating Systems Windows (XP, 7, 8, 10)
- Testing Skills Automation and Manual Testing

EDUCATION

MBA From Malla Reddy College of Engineering and Technology, Autonomous Institution Hyderabad in 2018
