

TRILOK CHANDER GUDURI

☎: +91 9100459421 | trilokguduri2017@outlook.com

PROFESSIONAL SUMMARY

- 3+ years of Solid working experience in using ETL methodology for supporting data extraction, transformations and loading processing in a corporate wide ETL solution using SQL & PL-SQL
- Skilled in need assessment, business process understanding, business analysis, data mapping & analysis, developing data management process and designing data extraction & load process
- Experienced in designing database complex SQL, PL/SQL packages and Analytic SQL, data mapping & conversion and data load, and creating packages for data migration & transformation
- Having experience in Development, Implementation, Testing Support of Data Warehousing and Data Integration Solutions using **IICS** and **Informatica PowerCenter**.
- Exposure of the technology stack, code, and processes for domain/capability/platform area - SDLC tools, Environment, Release, Assets, Security, Functional Testing, Cloud Computing with AWS & Azure, Data Services & so on
- Exceptional in creation of databases, SQL Code review & approval, applying database patches, upgradation, migrations, database cloning, user management, space management and troubleshooting on Windows platforms
- Resourceful in designing data system including requirement analysis, design, coding, testing and maintenance phases using Agile methodology
- Good knowledge of Database Architecture for OLTP and OLAP applications, Data Analysis, ETL processes in developing Enterprise Data Warehouse
- Excellent in constructing load dimensions, triggers, fact tables, user defined functions, views, indexes, user profiles, relational database models, data dictionaries and data integrity.
- Worked closely with technical leads, analysts and developers to design and implement cloud ETL solutions within a structured development process.
- A customer-centric professional with a knack for motivating teams for exceeding customer expectations in delivery of committed services

KEY COMPETENCIES

- Informatica powercentre & **Informatica IICS**
- Database Design & Development
- Extract, Transform and Load (ETL)
- SDLC/Agile Methodologies
- Business Intelligence
- Application Development
- Implementation & Deployment
- Database Architecture
- Database Capacity Designing
- Requirement Analysis
- Data Pipelines & Transformations
- Data Modelling & Architecture
- SQL Profiling
- Project Management
- Client Relationship Management
- Risk/Issue Management
- IICS

EDUCATION

- Masters in Cloud Computing | Dublin Business School, Dublin, Ireland | 2013 - 2015
- B.Tech. (Mechanical Engineering) | 2007 - 2011

TECHNICAL SKILLS

- **Operating System:** Windows, Linux
- **Language:** SQL
- **Applications:** Azure, AWS, IICS, cPanel, Arc GIS, GIT, Jenkins, Informatica Power Center, Teradata, Oracle (Star) application, Microsoft Excel, Microsoft Word

AREAS OF EXPERTISE

- Built data warehousing application to Enhance, Transform and Load data and send it to cubes for target applications.
- Responsible for maintaining Production ETL systems and DWH systems and managing daily failures within SLA
- Strong knowledge in Azure, Informatica IICS and powercentre
- Ensuring successful production deployments and closely monitoring multiple projects under Vodafone Italy
- Monitoring sizing, mapping and creation of target data lake architecture & design
- Extending Project Management support to manage implementation of the big data lake architecture, technology & tools in collaboration with the vendor
- Participating in the design, development and testing of the data components needed to support clients' reporting requirements and to integrate these designs into the overall client data strategy
- Identifying and analyzing business requirements, as well as integration issues and offering solutions
- Extensively working on ETL tool/complex ETL processes and analyzing complex external data for mapping the product

WORK EXPERIENCE

Apr 2023- may 2023 Genzeon technology solutions.

Mar 2022 – jan2023: Persistent Systems Pvt. Ltd., Pune, India

Key Deliverable:

- Effectively used most of the transformations such as the Expression, Aggregator, Connected & unconnected lookups, Filter, Router, Sequence Generator, Sorter, Joiner
- Implemented SCD type2 using IICS and validating and testing.
- Loading dimensions and fact tables.
- Reading data from Azure blob storage and loading into snowflake.
- Reading multiple files with indirect file loading using IICS.
- Extensively utilized Workflow manager for Workflow and Session Management, database connection management and Scheduling of jobs to be run in the batch process
- Imported data from various Sources transformed and loaded into Staging Area
- Ensured functional and technical understanding of the issues
- Developed mappings for slowly changing dimensions as per requirements
- Constantly created Sessions, Workflows Using Workflow Manager
- Built unit test cases to meet the business requirements and performed unit testing of mappings

May 2021 - Feb 2022: Data Glove IT Solutions, Hyderabad, India

Key Deliverable:

- Handled e2e SDLC phase in collecting and documenting requirements; prepared technical design/specifications for data Extraction, Transformation and Loading
- Extensively used Informatica cloud and Informatica Power Center 10.2 as an ETL to extract data from sources like Teradata MS SQL Server, Flat files, Oracle, and load into target database
- Actively worked in a competitive Agile environment to develop standard ETL framework and reusable mappings and Mapplets using various transformations like Expression, Aggregator, Joiner, Router, Lookup and Filter
- Successfully created Reusable Transformations, Worklets, and made use of the Shared Folder Concept using shortcuts wherever possible to avoid redundancy
- Adept in implementing standards for naming Conventions, Mapping Documents, Technical Documents, and Migration form
- Recognized for delivering the technical process flow for different Line of Business
- Gathered, analyzed & documented business requirements
- Created Informatica Mapplets, Mappings, Sessions, Worklets and Workflows for data loading

Jun 2018 - Jan 2020: SMAC Tech Labs, Guntur, India

Key Deliverable:

- Closely monitored and managed cloud environments as per the company security guidelines
- Accountable for maintaining source code management through cloud-based version control solutions

- Actively engaged in deploying and debugging cloud initiatives as needed in accordance with best practices throughout the development lifecycle
- Generated development and production environments using Azure cloud services
- Involved in creating and implementing Linux environments for production and development
- Assisted through troubleshooting problems within the Linux
- Pivotal in configuring web servers in the production, development and testing environments
- Instrumental in orchestrating and automating cloud-based platforms throughout the company
- Helped Project Planning team to identify & implement the most optimal cloud-based solutions for the company

Key Deliverable:

- Engaged in designing and deploying applications on the cloud
- Proactively identified and used appropriate cloud services to support applications on the cloud
- Efficiently migrated on-premise applications of the organization to the cloud
- Maintained the usage of cloud services and implementing cost-saving strategies
- Successfully automated different parts of the development process
- Accountable for creating and maintaining Linux servers for production
- Responsible for troubleshooting technical problems within the Linux environment
- Created backups for all production work as per agile timing
- Effectively maintained cloud servers and monitored the use Azure cloud services

ACADEMIC PROJECTS

MTech. Project Details: Developed a small business website using SAAS (Software as a Service Website) with the help of three-member team. This provides services/applications which can be deployed, modified and withdrawn in a matter of minutes. This is very useful for the small and medium enterprises for adopting cloud in their organization. The project aims to find the best SAAS (software as a service website). I played a key role in the team to provide key information and data in a strict time frame and exclusively generated reports of websites for small businesses along with other members

Description: The project was initially aimed to evaluate three SAAS in comparison with each other. The target website was the Online Flight Booking Website which was to be designed using three website builders Wix software, Webdya software and Weebly software each. However, while designing the websites it was realized the websites do not allow to generate real time data and hence the online flight booking website was not created to generate real time data and some other website like the online store were created. The open-source website builders are basically Content Management Systems. The websites were created each of the SAAS and are evaluated on basis on the ServQual model

MTech. Dissertation Details: The aim of this research is to evaluate the potential of network enabled cloud in provision of entertainment as a service which relates to the cloud entertainment. This research is going to find out how and up to what extent service providers getting good revenues and also the customers who are using mobile cloud entertainment services their satisfactory levels. And the related technologies using for cloud entertainment. This dissertation which gives knowledge on how cloud networking and deployments work.

Description: Network Enabled Cloud is the concept which brings cloud capabilities into the network with the flexibility and elasticity to deploy software services/applications. This research found that services/applications can be deployed, modified and withdrawn in a matter of minutes by using underlying concepts such as network slicing and network function virtualization and software defined network. This technology is very useful for the small and medium enterprises for adopting into their organization.

B.Tech. Project Details: The project aimed to replace 7-leaf rear suspension steel spring in light commercial vehicles with Mono-leaf composite spring.
