

TRUPTI PRADEEP ADULKAR

DevOps Engineer, Project training of 6 months.

Aiming for a devops engineer role in an innovative and forward-thinking organization where I can utilize my knowledge and experience along with a deep understanding of cloud platforms like AWS to help the organization achieve its goals.

KEY SKILLS

- Responsible for testing, deploying, and maintaining continuous integration and continuous delivery processes using tools like Jenkins and Git.
- Experience in managing multiple servers and possess strong knowledge of Linux systems and commands.
- Familiar with using Terraform to create applications & servers..
- Build Jenkins pipeline projects and perform continuous integration and continuous deployment process in it.
- Worked on Prometheus & Grafana tools to monitor output.
- Worked on Docker containerization technologies.
- Hands on knowledge of version control system Git, GitHub and GitBash.
- Hands-on practice with CI/CD tools like Jenkins and configuration management systems like Ansible.
- Have done deployment process using Docker and Kubernetes and worked on docker containerization technologies.
- Excellent problem-solving and troubleshooting skills.

WORK EXPERIENCE

Organization: StarAgile

Role: DevOps Engineer

Dec-2022 to May-2023

Bangalore

Project: A. Finance and Banking Domain

Description:

- The project involved a leading banking and financial services provider called Finance Me.
- They faced challenges with their monolithic application architecture and manual processes.
- The solution was to adopt a micro service architecture and implement DevOps practices.
- The project focused on using AWS as the primary cloud services provider for infrastructure and application deployments.
- The goal was to deliver product updates frequently with high quality, reliability, and accelerated software delivery.
- Continuous integration and deployment were implemented using Git, Maven, Jenkins, Docker, Ansible, Selenium, Terraform, and Prometheus with Grafana for monitoring.

Project: B. Healthcare Domain

Description:

- The project involved a super specialty hospital called Medicure, which wanted to centrally manage doctor and patient data across its hospitals.
- The objective was to automate the application build and deployment process using DevOps.
- The project aimed to deliver product updates quickly with high quality, reduce feedback time, and utilize Kubernetes for container management.
- Challenges included complex builds, manual testing efforts, and time-consuming infrastructure creation.
- Continuous integration and deployment were achieved using Git, Jenkins, Docker, Ansible, Selenium, and Kubernetes. Monitoring was done with Prometheus and Grafana.

Responsibilities:

- Utilized Git for version control, enabling effective tracking of code changes throughout the project.
- Implemented Jenkins for continuous integration and continuous deployment, automating the build, test, and deployment processes.
- Employed Docker to containerize applications, ensuring consistency and portability across different environments.
- Utilized Ansible as a configuration management tool to automate the deployment and management of software and infrastructure configurations.
- Leveraged Selenium for automating tests on the deployed web application, simulating user interactions and verifying functionality.
- Utilized Terraform for creating and managing infrastructure, defining infrastructure resources as code.
- Monitored and visualized application and infrastructure health using Prometheus and Grafana, enabling real-time monitoring and reporting.
- I integrated AWS services like EC2 and S3 to leverage scalable computing power and reliable storage for my project.

ACADEMIC PROJECT

Aug 2019-Aug 2020

Project Title: Implementation of Hi-Tech Agriculture.

Role: Implementation of Hi-tech Agricultural Solar Fence Security with soil Humidity Based Automatic irrigation system and voice alert on PIR live Human Detection is been implemented in this project for safe and secure agriculture irrigation. The project irrigation control using ARM7 is designed to tackle the problems of agricultural sector regarding irrigation system with available water resources. Prolonged periods of dry climatic conditions due to fluctuation in annual precipitation, may appreciably reduce the yield of the cultivation.

Tools used: ARM7 Microcontroller, LCD display, Buzzer, Solar panel, Battery, Soil sensor, Relay, DC Motor, ADC0808.

SKILLS & COMPETENCIES

Docker

Kubernetes

Selenium

Github

Jenkins CI/CD

Linux

Maven

Tomcat

Basic of JAVA

Prometheus

Ansible

Terraform

Grafana

Gitbash

AWS

IaC

CI/CD Pipeline

Source Code Management

Continuous Deployment

Python

Continuous Integration

Configuration Management

Cloud computing

Shell scripting

Continuous Delivery

CERTIFICATION

Dec-2022 to May-2023

Bangalore

- IBM Certified DevOps Engineer from StarAgile.
- Certified DevOps Engineer for successfully completing DevOps Master's Program.
- Certificate of Experience for successfully completing the prescribed projects.
- Successfully completed "DevOps Fundamentals" Powered by IBM Developer Skills Network.
- Successfully completed "Docker Essentials: A Developer Introduction" by IBM Developer Skills Network.

AWARDS & ACHIEVEMENTS

- 2nd rank in project competition 2017 conducted by NYSS College.
- 1st rank in project competition organized by Gaikwad Patil college of engineering.
- 2nd position in college level project competition in 2017.
- Ex-coordinator in college Forum activities.
- Ex-Coordinator at LAKSHYA EVENT organized by college for self development.
- Actively participated in college forum activities.

EDUCATION

Aug-2016 to Nov-2020

Nagpur

Course:

- Bachelor of Electrical Engineering RTMNU University

76.34%

Aug-2014 to Nov-2017

Nagpur

Course:

- Diploma in Electrical Engineering. MSBTE University

75.21%
