

VAIBHAV MAHADIK

DATA SCIENTIST

Professional Experience of 3.5 years in working on industrial use cases in **Data Science** using **Python & Machine Learning, NLP** for Analyzing, forecasting, Prediction and optimization. Experienced data scientist with good presentation and interpersonal skills.

CONTACT

9860491500

vaibhavmahadik1095@gmail.com

Sr no 53/58 Sainath Nagar, near mahadev temple, wadgavsheri, pune-411014.

SKILLS

- Python
- Machine learning
- Statistics
- Data Science
- Data Analyst
- Deep Learning
- NLP
- SQL-MySQL, Oracle SQL developer, Zeppelin, Teradarta.
- Snowflake
- MongoDB
- Time Series
- Pandas & NumPy
- Scikit Learn
- Matplotlib & Seaborn
- Flask
- Github
- Gitlab
- Excel

WORK EXPERIENCE

Data Scientist | Nov 2022 - Present
R Systems International Limited, Noida, Delhi.

Data Scientist | May 2020 - Oct 2022 |
Techies Infotech Pvt Ltd,
Bangalore.

Roles & Responsibilities:

- Experience of analytic skills related to working with structured datasets,
- Experience in python skills with focus in data handling and data analysis.
- Strong knowledge of machine learning models, NLP, model training, and hyperparameter tuning.
- Performed statistical data analysis.
- Performed exploratory data analysis and future engineering to improve the performance if the model.
- Communicate the results to management via data visualizations, presentations.
- Data fetching from client database by using Sql queries.
- Experience of working with Unsupervised machine learning.
- Experience of identifying trends, pattern and insights to support decision making.
- Ensuring the quality of data by implementing validation processes.

• EDUCATION

- Bachelor of Engineering
Mumbai University | 2017.
- HSC | 2013 |
Maharashtra State Board .
- SSC | 2011 |
Maharashtra State Board .

Projects:

1. Detecting Genuine Car Insurance Claim.

- Built the model for detection of fraud insurance account so that challenge of genuine customer satisfaction because delay payouts and more investigation time got cleared rapidly.
- Involved in Analyzing large amounts of information to find patterns and solutions. Using machine learning tools to select features, Propose solutions and strategies to tackle business challenges.

2. Predict Call driver from transcript call(NLP).

- Developed model to classify the call driver of call by reviewing Agent-Customer transcript data.
- Importing data from client database as per requirement. Perform various task on datasets which comes under EDA pipeline. Categorization and restructuring of data. NLTK & spacy library for preprocessing such as Lemmatization, stop-words removal.
- Applied different NLP algorithm & technique like Keyphrase extraction, cosine similarity, Jaccard similarity, wordclouds to get key-phrases and different topic modeling techniques like LDA, NMF, BERT to get categories of calls .

3. Loan Repayment Default Prediction..

- Random forest model created which decreased losses due to bad loan and saved time of loan recovery process as well.
- Involved in Data Pre-processing Techniques such as data cleaning, visualizing the data, identifying outliers and making data ready for Machine Learning Techniques.
- Model performance evaluation and presentation to the business users
