

VIMAL P

Software Engineer

✉ vimalrajpan13@gmail.com

☎ [+91 - 9043357065](tel:+91-9043357065)

Professional Summary

- Have overall 4 + years of experience in IT Industry with 3.2 years as AWS and **Devops Engineer** and 1 year as a System Engineer .
- Implemented AWS Cloud Platform and its features which includes EC2, S3, IAM, VPC, Security Groups, SNS and SQS, ECR, Route 53, Auto Scaling, ELB, RDS, Dynamo DB, Cloud Watch, Cloud Front .
- Experience in working with version control systems like **GIT** and used Source code management tools like **Git Hub** , **Bit Bucket** .
- Proficient in creating **S3** buckets and implementing lifecycle management for data and logs, and incorporating EBS as needed .
- Good knowledge on managing and integrating code Quality tools like **SonarQube**.
- Extensive work on creating CI/CD pipelines with **Jenkins**, automating code deployment from commits to building using Apache **Maven** and deploying to **Apache Tomcat** .
- Implemented Docker on the production side by writing the **DockerFile** and building into docker images and running as a containers .
- Proficiency in scripting languages like python , **Bash and shell Scripting** for task automation and infrastructure management..
- Maintaining the Artifactory images in the **Docker hub**, **ECR** and nexus Artifactory .
- Proficiency with **Docker** for Containerization and **Kubernetes** for orchestrating containerized applications, including deployment, scaling, and management. .
- Experience working with **YAML** configuration files for various tools and services, such as Kubernetes manifests, Docker Compose files, **Ansible playbooks**, and more .
- Deep expertise in tools like **Terraform**, **Ansible** for defining and managing infrastructure through code .
- Hands on experience on JIRA and Service Now for creating bug tickets and workflows.
- Implementation of monitoring tools such as **Prometheus**, **Grafana**, Cloud Watch and Splunk for application and infrastructure health .

Technical Skills

- | | |
|--|---------------------------------|
| • Cloud | - Amazon Web Services(AWS) |
| • Operating System | - Linux , Ubuntu , Windows |
| • Devops CI - Tool | - Jenkins |
| • Version Control System | - Git , GitHub |
| • Container | - Docker, ECR |
| • Artifactory | - Nexus Artifactory , Dockerhub |
| • Build Tool | - Maven, npm |
| • Infrastructure as code | - Terraform |
| • Configuration Management Tool | - Ansible |
| • Container and orchestration | - Kubernetes |
| • database | - mysql |

Professional Experience

Software Engineer - Devops at Senseapp Technology Pvt Ltd

Client 1 - E-commerce

To establish a streamlined platform for ordering and delivering food to customers and Improve convenience and accessibility for consumers to order food from a variety of restaurants and Diverse restaurant selection and Real-time tracking of orders which includes Customer reviews and ratings and making user friendly websites for making orders.

Client 2 - Health Sector

It is a pharama based project in which the customer will upload the prescription and we receive the prescriptions electronically and then medicine and pharmacy items are delivered to the customers to their door steps and they can track their medicines and personalised medicines charts are given to the customers how to use and consume medicines .

Roles and Responsibility :

- Deploy machines using EC2, creating ,adding and modifying EBS Volumes,security Groups,Port restriction (Inbound/Outbound) ,Server Shredding process while terminating AWS instance.
- Expert in designing,developing Jenkins deployments and CI/CD pipeline tools that orchestrate, deploy hundreds of micro services in various platforms (java,node js,,python) in AWS cloud .
- Understanding the client environment, Administrating and creating solutions using AWS services, CI/CD, GIT, and Dockers
- Proficient in deploying, scaling, and managing containerized applications using Kubernetes.
- Implementing security best practices, including Role-Based Access Control (RBAC), Network Policies, and PodSecurityPolicies to secure Kubernetes clusters and workloads.
- Used tools like **Helm** and **Kubernetes manifests** to define infrastructure and application deployments as code, enabling version control and reproducibility.
- expertise in various Kubernetes volume types, including emptydir, HostPath, Persistent Volumes (PVs), and Persistent Volume Claims (PVCs).
- Implementing backup and disaster recovery strategies to ensure data integrity and high availability of applications in Kubernetes clusters.
- Optimized Kubernetes cluster performance through resource allocation, efficient pod scheduling, and tuning of cluster components.
- used Terraform to automate Infrastructure for a staging environment .
- Creating reusable **Terraform modules** to standardize infrastructure deployment, promoting code reusability and maintainability.
- Implementing Terraform state management strategies to securely store and share infrastructure state files, ensuring collaboration and version control.
- Followed best practices for Docker containerization, including the principle of single responsibility, minimal base images, and efficient layer caching.
- Implementing best practices for versioning and tagging Docker images, simplifying the management of different application versions.
- Provided technical support by troubleshooting issues on various platforms, demonstrating strong problem-solving skills.

Education

- Sri Sairam Institute Of Technology | B.E Mechanical Engineering | (2014 - 2018)
- Velammal matriculation higher secondary school 2014
