MOB : 9441123616

EMAIL:SUKUMARREDDY195@GMAIL.COM

LINKEDIN PROFILE : <https://www.linkedin.com/in/sukumar-reddy-300b42239>

Professional summary :

- A DevOps Professional having in **Linux/Jenkins/Docker/Ansible /Agile/Kubernetes/**
- Accented with the latest trends and techniques of the field, has strong ability to learn new technologies in short span and implement independently
- Having excellent communication, presentation and interpersonal skills
- Good hands-on knowledge of source code management tools like Git Github
- Worked on cloud-based servers like AWS
- Experience with integration tools like jenkins
- proficient configuration management tools,and in developing CI/CD pipelines
- Creating CI/CD pipelines by integrating Github,maven,jenkins
- Building/Maintaining Docker container clusters managed by Kubernetes linux,bash,git,docker
- where I can apply my skills and knowledge to improve the quality of my work.

Skills :

- Linux
- Git
- Kubernetes
- Jenkins
- Ansible/Docker
- Aws/VMWare/Red hat

Technical skills :

- Operating Systems : Linux
- Cloud Technologies : AWS (VPC, EC2, S3, Cloud Watch, RDS, IAM)
- Configuration Management : Ansible
- Continuous Integration Tools : Jenkins
- Web server Applications : Tomcat.
- Containerization Tools : Docker

- Monitoring tools : Cloudwatch ,
- Version Control Tools : GIT, GitHub

Roles & Responsibilities:

- Setup/Managing Linux Servers on Amazon (EC2, EBS, ELB, SSL, Security Groups, RDS and IAM).
- Involved working with a PaaS solution such as RedHat Openshift
- Creating AWS Instances and Resources Bills.
- Launching Amazon EC2 Cloud Instances using Amazon Web Services (Linux/ Ubuntu/RHEL) And Configuring launched instances with respect to specific applications.
- Performed S3 buckets creation, policies and also on the IAM role based policies and Customizing
- GIT pull the code in to GITHUB,JENKINS
- Installed application on AWS EC2 instances and also configured the storage on S3 buckets.
- Knowledge On Kubernetes,

Internship Projects :

Linux Web-Server

you can create a web server in Linux. In this project, you can build a web server for NAS servers to host a website.

For the web server, you have to use Linux as your OS, Apache as the web server software, MySQL for database management, and Python or PHP for programming. Moreover, you can set up the port forwarding rules, allowing you to access the server outside the local area network.

Project on Jenkins Remoting Jenkins is a DevOps

automation tool that is mainly used for testing and building software. It is open-source and is written in Java.

With the help of Jenkins software, developers can build such pipelines that follow CI/CD (Continuous Integration/Continuous Delivery) workflows.

Jenkins' communication layer is implemented using Jenkins Remoting, an executable JAR and library. This project aims to improve Jenkins remoting. It requires knowledge of Java, message queues, and networking basics, which

Education :

- Completed Bachelor of technology from Anantapur **Chiranjeevi reddy institute of Engineering and Technology** , Stream – **mechanical engineering**, **JNTUA**, Aggregate - 64.25% (2013-2021)
- Completed intermediate from Hyderabad **Narayana junior college** , Stream – MPC, Aggregate – 59% (2011-2013)
- Completed X th from anantapur **LRG high school** Aggregate – 60% (2010 - 2011)

Languages known : ENGLISH, TELUGU

Declaration :

I hereby declare that all the information given above is true to the best of my Knowledge.
