PROFESSIONAL SUMMARY:

- **Having 3+ years** of experience in the areas of Data warehousing analysis, design, and development of software applications.
- Expertise in Data warehousing solutions using Informatica Power Center, building Data Marts and data warehouse.
- Currently Working on ETL tool Informatica Vs 10.1.1
- Solid experience in Informatica Power Center (versions 10.1.1) including Designer, Workflow Manager, Workflow Monitor, Repository Manager.
- Expertise in Data Integration, Extract, Transform and Load from different Data Source Systems like Oracle and Flat Files.
- Optimizing the SQL to improve performance.
- Optimizing Informatica Mappings and sessions to improve performance.
- Experience in performance tuning of sources, transformations, targets, mappings, worklets, workflows, and sessions.
- Have knowledge in UNIX shell scripting and SQL.
- Good experience in performing and supporting unit testing, system integration testing.

Working Organization:

- Worked as Informatica Developer in **Paragon Digital Serviceses , Chennai** from March 2022 to till date.
- Worked as Informatica Developer in **Smartek21, pune** from July 2019 to February 2022.

Academic Qualification:

- **B.Com (Computers) from Y.V University 2018.**

Technical Skills:

ETL Tools	: Informatica 10.4.1.
Database	: Oracle
Operating Systems	: Windows XP/ Windows 7,8.10. Unix
Programming	: SQL
Web Technologies	: Html
Applications	: MS Office, SQL Developer.

Projects Information:

Project – 2

Client : Paragon Digital Serviceses
Title : Paragon
Duration : march 2022 to till date.
Role : ETL Developer
Environment : Informatica 10.X, Oracle 11g, UNIX

Project Description: Paragon Digital is a premier digital media services agency offering expert media operations, data analytics, creative and campaign optimization, as well as ancillary business finance services to advertisers, publishers and ad tech platforms across the globe. Paragon Digital is distinguished by its exceptional commitment to quality, delivery optimization, and by account teams that provide white glove service to 50+ clients. Direct response to the market's urgent need for high-level and on-demand technical expertise. Since its founding Paragon Digital has grown to 1,300 employees..

Roles and Responsibilities:

- Designed the Mapping Technical Specifications on the basis of Functional Requirements.
- Created ETL mappings using Informatica Power Center to move Data from multiple sources like Oracle, Flat files into a common target area such as Staging, Data Warehouse and Data Marts.
- Developed different mappings by using different Transformations like Aggregator, Lookup, Expression, update Strategy, Joiner, Router etc to load the data into staging tables and then to target.
- Prepared Unit test cases for the mappings.
- Involved into the preparation of deployment plan which contains list of mappings and workflows they need to migrate bases on this deployment team migrate the code from one environment to another environment.
- Working closely with business and technical teams to understand, document, design and code ETL processes
- Used parameters and variables in mappings.
- Involved in the code review for mappings which developed by the team members.

Project # 1	Key Energy OBI HR Analytics Implementation	
Client	KEY Energy U.S.A	
Role	ETL Developer	
Organization	Smartek21	
Team Size	Project: 6	
Environment	Database	SQL,PL/SQL,Unix,Flat Files,Informatica 10.x

Project Description:

Key energy is one of the pioneers in rental services, well services, coiled tubing and fluid management, objective of the project is to integrate processes across geographies for Financial, sales&shipment and procure modules by extend the OTB data model and ETLs to accommodate customization of the source application from EBS Financial and HR module modifications.

Activities:

- Understanding the business requirements and building the mappings.
- Involved in creating test cases and unit test Documents.
- Developing source to target maps and identify transformation rules.
- Used parameters and variables in mappings.
- Involving into code review for mappings which developed by the team members.
- Working closely with business and technical teams to understand, document, design and code ETL processes
- Executed the tasks and tested the data once loaded into target tables
- Providing daily, weekly and monthly status during meetings.

Environment: Informatica 10.X and Oracle.
