

CAREER OBJECTIVE

Seeking a challenging opportunity in an industry that promotes professional growth while making a positive contribution to the organization and mutually learning from the organization.

EDUCATION

**AVC College of Arts & Science,
Mayiladuthurai**

Bachelor's Degree in Computer Science
2013 – 2016

D G Vaishnav College, Chennai.

Master's Degree in Computer Science
2016 – 2018

SKILLS

Operating Environments

- Windows family and Unix

Technical Exposure:

- Oracle, SQL SERVER, UNIX, ETL Testing, Snowflake.
- Functional Testing(Manual)
- BI- Report Testing (Power BI)

Tools Used

- SQL Developer, Toad, SSIS, JIRA, Informatica- IICS

PROFESSIONAL SUMMARY

Overall IT Experience in 4 plus years, as ETL tester and Manual Testing.

- Created test cases and made plans to finish unit testing.
- Assessed the requirements and supplied estimates of the work effort involved.
- Implemented corrective actions based on collected metrics.
- A test plan and test scenarios were created and subsequently reviewed through peer-to-peer validation.
- Understanding of data and functional validations relevant to the investment banking system.
- Skilled in creating regression test cases and performing integration testing to detect bugs associated with dependencies.
- Skilled in UNIX commands and experienced in utilizing SQL Joins, Group functions, Analytical functions, and Sub queries.
- Skilled in validating the integrity of data between the fact and dimension tables.
- Employed UNIX commands like grep, sed, awk, and find to process files within the UNIX environment.
- Experience in focusing on agile methodologies.

PROFESSIONAL EXPERIENCE

- Working as ETL Tester at “Innoviti Technologies Pvt. Ltd.” (October 2022 to December 2023)
- Worked as ETL Tester at “Equiniti India Pvt. Ltd.” (July 2022 to September 2022)
- Worked as ETL Tester at “Renault Nissan Technology Business Center India Pvt. Ltd.” (April 2022 to June 2022)
- Worked as ETL Tester at “Winsar Infosoft Pvt. Ltd.” (August 2019 to April 2022)

PROJECT SUMMARY

PROJECT-1

Domain: Investment Banking

Client: Citibank Venezuela

Environment: Oracle, SQL Server, and Unix, Snowflake.

Tools: Git, JIRA, Excel.

ETL Tool: Informatica- IICS

Role: ETL Tester.

PROJECT-2

Domain: Investment Banking

Client: Central Bank of Cuba

Environment: Oracle, SQL Server, and Unix.

Tools: Git, JIRA, Excel.

ETL Tool: SSIS.

Role: ETL Tester.

PROJECT-1 RESPONSIBILITIES

- The task required the creation of test scripts for ORACLE and SQL SERVER databases, utilizing SQL query techniques such as joins, sub-queries, and analytical functions to verify different transformation logics.
- The validation of flat files was carried out by utilizing UNIX commands to verify the filename, patterns, and permissions of the source files.
- I created bug reports in an Excel file and reported them using the JIRA application to communicate the bugs to the development team. This ensured that the bugs were tracked appropriately until they were resolved and closed.
- As an Agile team member, involved in attending Agile calls and updated the current status of the working JIRA in the scrum call.
- Created test summary reports (TSR) to find the test coverage at the time of test closure.
- The test cases, test scenarios, and test scripts underwent a peer-to-peer validation process before being executed in the SIT environment.
- Executed Smoke testing to validate the application build in the beginning, and then performed Regression testing to evaluate the effects of the build on the current functionalities.
- I conveyed the message to the business team to gain clarity on the gaps in requirements and to comprehend the functionality that requires further clarification.

PROJECT-2 RESPONSIBILITIES

- Gather and analyze the business requirements of new change requests and enhancements from clients.
- Defects identified in the testing environment are communicated to the developers.
- The testing process must be concluded by analyzing the output results and generating a test summary report (TSR) for future reference.
- Whenever issues arise, it is essential to escalate them to the relevant authorities in order to bring them to their attention and obtain prompt resolutions.
- During the Sprint review meeting, it is necessary to present a comprehensive demonstration of the completed points to both the scrum master and product owner.
- To validate the consistency of data flow between transaction screens and reports, the testing procedure involved scrutinizing web applications and their associated reports.
