BCA	Sri Venkateshwara University, Tirupati	2022	7.80(C.G.P.A)
Intermediate	Board of Intermediate, AP	2019	6.30%
SSC	Board of Secondary Education	2017	6.80%

Work Profile

- Working as a software Test Engineer' at “**Pegasus Infotech**” from September 2022 to till date.

Technical Skills

Testing Tools	Selenium WebDriver, JIRA, Eclipse.
Build Tools	Maven
Languages	Java, SQL.
Frameworks	TestNG, DataDriven Framework
Bug Tracking Tools	Bugzilla, JIRA
Testing Strategies	Functional, System, Integration, Regression, Re-testing, Performance, Smoke, and User Acceptance testing.
Databases	SQL Server
Platforms	Windows 10

Professional Experience:

Project Title : RouteOne.
Client : US Motor Finance.
Role : Automation Engineer.

Description:

The Client One Corporation is comprised of the Specialty finance Stores segment and the Online segment. This is a finance solution with a 4-wheeler financing functionality and a secure administration area. This website has been built to enhance its efficiency and market share. This portal, like shopping and financing of Cars and 4wheelers, includes admin control for viewing the order information, contract billing for new product entries, editing the specified product, deleting the product, etc. It provides an easy and secure way to shop online and an attractive interface for the end user.

Roles & Responsibilities:

- Understanding the client requirements and functionality of the application.
- Test Case Review, executing Test Cases and verifying the actual results against the expected results.
- Executing regression test cases for every new build.
- Having knowledge of Jenkins jobs.
- Performing functional, integration, system, compatibility, and smoke testing.
- Analyze Test reports and raise defects for the same.
- Keeping track of the issue/bugs until fixed using Jira.
- Interacting with the development team and the client with respect to the issues.
- Involved in identifying the test cases for Automation.
- Defect logging and Tracking using Jira.
- Mapping Test Cases and Test Scripts on the Requirements Traceability Matrix.
- Automate the identified cases for my modules.
- Involved in Maintenance Items for Regression with Client Meetings.
- Involved in Preparing Test Reports for the Regression.
- Involved in Preparing Build validation Framework for the Sanity Testing.

Project Title : Global Travel Management.
Client : GTM Sweden.
Environment : Java, SQL server

Description:

Global Travel Management (GTM) is a web-based application, which allows corporate clients to make their Reservations and bookings for all other travel needs which includes Flight, Train, Ground transportation, Rental cars, and Hotel bookings.

This Web-based Application automates corporate travel activities and works of travel agencies, the application includes a Travel/Sales agency that interacts with various clients to fulfill the travel needs.

Roles & Responsibilities:

- Extensively involved in all stages of testing life cycle, Test Driven Development methodologies and Software Development Life cycle (SDLC) using Agile methodologies.
- Understanding the Requirements and functional specifications of the application.
- Developing Test scenarios, Test Cases, and Test Data based on requirements.
- Executing the Test Cases
- Prepared Regression Test cases and executed them
- Logging Defects using JIRA and tracking till closure.
- Working closely with the Developers in the review and modification of the product and its specifications using Agile-testing methodology.
- Responsible for collecting and analyzing the test metrics and then submitting the reports, which kept track of the status and progress of the testing effort.
