

Objective

Seeking a challenging role to work in a professional environment that provides opportunity to learn key technologies, and to be an effective team player in developing, managing projects and to be an asset for the organization by delivering to the best of my capabilities.

Professional Summary

- **4.6** years of Experience as a Build **and Release/ DevOps** engineering in Software Configuration and Release management includes source code, build and deployment management and complete understanding of Software Development Life Cycle using Agile methodologies.
- Setting up and maintaining **CI & CD** pipelines and delivering releases for multiple Applications running on **Linux** based distributed Infrastructure.
- Expertise in supporting multiple projects during **builds** and **release** process. Hands on experience with version control tool **GIT and GITHUB**.
- Good working experience on **Linux and Windows** Operating Systems
- Hands on Experience with Build Tool **Maven** to generate project **Artifacts**.
- Hands on Experience in automating build process using **JENKINS CI** Tool.
- Experience on Setting up the Build Machines on various platforms.
- Good experience in deploying the files in **Tomcat** Server. Worked on ticketing tool like **JIRA**.
- Integration, deployment and administration of **Java** Application servers – Tomcat Application Server across **Linux** platforms. Experience on integrating Code Quality Analysis Tools like **SonarQube**
- Experience in using **Nexus**, Artifactory Repository Managers for Maven builds. Integrating **Nexus** with Jenkins to store artifacts.
- Experience in Terraform and Ansible. Creating custom image from a **Docker File**.
- Expertise in creating **Docker Images** and maintaining it in private Artifactory repository Nexus Hands on experience in Container Orchestration by using **Kubernetes** and **Docker Swarm**.
- Experience on writing **Docker-Compose Yaml** files.
- Experience on creating **Kubernetes** cluster and writing **manifest files** and services files
- Build and Deployment of the java applications onto different Environments like **QA, UAT** and Pre-Prod.
- **Troubleshoot** the Application related issues in **production & non-production** environments.
- Design, integration, deployment and administration of **J2EE** Application servers – Tomcat Application Server across **Windows** and **Linux** platforms.
- Good knowledge on **methodologies** like **Agile and waterfall model** for project planning and execution.
- Experience in end-to-end building and deploying and configuring process and implementation from local **QA** environment to **UAT** and **Production**.
- Managing **PaaS** platform hosted on **AWS** running with 99.99% uptime using **Auto scaling**.

Skills

Version control system	Git, GitHub
Operating Systems	LINUX, Windows, Mac OS
Monitoring Tools	Nagios
Scripting	Shell Scripting (BASH and Groovy basic knowledge)
Build Tools	Maven
Web Server	Apache
Application Server	Apache Tomcat
Artifact repository Manager	Nexus,
Quality code Management Tool	SonarQube
Continuous Integration Tools	Jenkins (CI)
Cloud Environment	AWS
Configuration Management Tool	Ansible, Terraform
Containerization Tool	Docker
Container Orchestration Tool	Kubernetes
Bug Tracking Tool	Jira

Work Profile:

Current Designation : DevOps Engineer

List of Major Technologies: Windows, Red Hat Linux, Shell Scripting, Jira, , Apache, Git, Maven, AWS, Ansible, Docker, Kubernetes,

Academic Credential

Bachelor Of Engineering at CSJM university, Kanpur, 2019

Professional Experience

Working as a **DevOps Engineer/Build& Release Engineer** at Cognizant from **Apr 2019** to **Till Date**.

Project 2#

Project Name	Bupa Arabia
Client	NMIT Solutions.
Role	DevOps Engineer
Duration	Jan 2022 To till Date
Environment	Maven, GIT, Jenkins, Shell Scripting, Tomcat, Linux, ,Ansible, Aws, Docker, Kubernetes, Terraform.

Description:

Bupa Arabia for Cooperative Insurance Company Bupa Arabia is a financial service provider that offers cooperative health insurance products such as Bupa corporate for large companies.Bupa Bussiness for small and medium enterprise,Bupa business for individual which provides a medical insurance program to individual employee.It also offer Bupa family for Saudi families which comprise medical protection.

Roles and Responsibilities:

- Setting up the new build environment for various applications in **Windows/Linux** environment.
- Managed to organizational standards by maintaining the source code in **GIT** for various applications.
- Setting up the new Build Environment for various products in Linux Environment.
- Maintaining and extending configuration and build sub-systems on **GIT**.
- Creating and maintaining the development and release branches on **GIT**.
- Using **Maven** as a build tool, I could automate the process of building artifacts.
- Supported and helped to create dynamic views and **snapshot** views for end users.
- Implementing **Jenkins** continuous integration tool including installing setting the jobs/plans and setting up the tool for deployment.
- Involved in installing **Jenkins** on a **Linux** Machine. And creating a **Master** and **Slave** configuration to implement multiple parallel builds through a build.
- Used **AWS** services like **EC2, S3, EBS, Cloud Watch, ELB** for building infrastructure.
- Participates in the design and implementation phases for new and existing products, with a focus on **AWS** technical knowledge for successful execution of the requirements.
- Help engineering teams implement **new technologies** in development for future production deployment. Actively monitor and administer the applications and hosting environment to increase **efficiency, improve reliability, and minimize downtimes**.
- **Measurement, optimization and tuning** of system performance and ensuring that systems will run reliably and are highly available in a **24/7** production environment.
- Automated build deployments into **EC2** using **Ansible**
- Experience in installing and configuring Ansible on build server and having experience with playbooks using **YAML**.
- Using Configuration management tool Ansible for configuring multiple servers.
- Using Ansible to write Ad-Hoc for single Services & maintain Playbooks for multiple services.
- Used **Docker Container** for running different individual services and optimizing the infrastructure cost.
- Managing/Tracking the defects status using **JIRA**.
- Involved in deployment of the application using **Tomcat**.
- Primary responsibilities include Build and Deployment of the java applications onto different Environments like **QA, UAT, pre-Prod** and **prod**.
- Production environment support activities which include major release or emergency hot fix deployments, scheduling and coordinating with client regarding Operational Job Cycles or any activities.
- Implemented **CI/CD** using **Jenkins** and **Kubernetes**

Project 1#

Project Name	Crew Trac, Air Crew, Crew Control
Client	Sabre Travel Technology Pvt Ltd
Role	Build and Release Engineer
Duration	Nov-2019 to Dec 2021
Environment	Git, GitHub, Tomcat, SonarQube, Jenkins, Ansible, Maven.

Description:

Sabre Technology is a leading Technology Provider to the global travel industry our corporate responsibility mission is to drive positive social and environment change , together to our employees and customers At the global capability center.

Roles and Responsibilities:

- Administration of **GITHUB** includes creating **branches, tagging, access permissions** and setting up **hooks** & locks.
- Maintaining GITHUB code repository and **backup files**.
- Experience in Creating **branches and tags** to separate build system after a milestone releases and Create build storage archives for back tracking builds.
- Used **ANT** scripts to build the source code. Supported and helped to create Dynamic Views and Snapshot views for end users.
- Developing and maintaining scripts to automate the build, packaging as well as automation of time consuming, error prone tasks associated with the build
- Automated build scripts using **ANT** and **Shell Scripts**. Configured **Jenkins** CI tool for project and setup Nightly Builds.
- Automated the code deployment process in each environment (development, QA, Staging, Production).
- Configured a continuous integration process and interface with the operations team to ensure project artifacts are deployed automatically to various environments using **Jenkins**.
- Application/Web Server Log files analysis to troubleshoot application problems on application and web server side.
- Installation, Configuration and Administration of **Jenkins** over UNIX and LINUX build machines in distributed mode over Apache Tomcat and configured **jobs** along with various plug-in for Continuous Integration, Release Builds for **AGILE** and Production Branches.
- Accomplished in tool automation using **Shell scripting**.
- Participated in Bug review meeting and release the builds to **pre-production and production servers**.
- Involved in deployment of the application using **Tomcat**.
- Assisting development team in resolving issues with build, environment, SCM and tools.
- Good understanding of Amazon Web Services (AWS), Creating EC2 Instances, S3, Auto scaling, ELB and configuring all necessary services.
- Performed **Build** and **Deployment** activities without any rework.
- Responsible for the **deployment on Linux** for Dev/ QA, staging, productions environment.
- Preparing the build statistics and produce to the management team.
- **Troubleshoot** deployment problems, **release issues** and **environment issues** in a multi-component environment.
- Working closely with development team to identify and resolve build or deployment problems and support. Troubleshooting of Performance and Stability Issues, Support software environments, build, release, deployment and operational issues
- Active involvement in the project management in terms of planning the parallel releases and merge.
