Profile

DevOps and Cloud Engineer with a strong focus on creating secure, scalable environments and simplifying deployment processes through automated CI/CD pipelines. Skilled in managing AWS infrastructure, configuring containerized applications. Experienced in using a mix of DevOps tools and cloud technologies to implement reliable systems that prioritize security, monitoring, and efficiency, collaboration, ensure uptime, and make software delivery reliable and straightforward. Committed to bringing operational improvements that support a seamless deployment experience.

Experience

Associate Software Engineer, Xcel Corp – Bangalore, India July 2024 – Present

- Managed **AWS infrastructure (S3, EC2, VPC, Lambda, Route 53)** for scalable, automated deployments.
- Set up development ,pre-production , **production environments** to streamline releases.
- Enhanced backend performance with **Gunicorn**-integrated Flask.
- Built **CI/CD pipelines in Jenkins and GitLab** for automated integration and deployment.
- Dockerized components for consistent and scalable deployments.
- Configured Apache with **Certbot SSL and GeoIP-based routing** for localized content.
- Integrated **Postfix** with **Linux monitoring for advanced logging** and visibility. Item Automated server tasks and backups with **Bash scripts**.
- Deployed Zentao server for seamless team collaboration.
- Set up **Prometheus** monitoring with custom rules and alerts for server health and uptime

Frontend Intern, Varcons Technologies – Bengaluru

Aug – Sept 2023

- Worked as a frontend intern on a restaurant application team.
- Utilized **Vue.js** and CSS for developing user interfaces.
- Collaborated with designers to convert **Figma** prototypes into responsive web components.
- Focused on enhancing usability and ensuring a seamless user experience.
- Gained hands-on experience in modern frontend technologies through real-world project contribution

Projects

Smart Projectors: Reviving Legacy Systems (ACADEMIC)

- This project transforms legacy projectors into smart devices, providing modern functionality affordably. It reached the **second round of KSCST**, with ongoing research documenting its cost-effectiveness and ease of implementation.
- **Flask Server**: Operates on Raspberry Pi, enabling communication with the Kivy application.
- **Service Files**: Facilitate smooth system operations.
- **xdotool**: simulates key presses for efficient presentation control.
- Document Handling: **CLI API of LibreOffice and Evince** processes PPT, DOCX, and PDF files.
- **Tkinter**: Generates QR code for user-friendly scanning and connectivity. Item Extensibility: Allows continued use of existing projectors, avoiding costly upgrades.

Animation Engine for Maths (PERSONAL AND UNDERGOING)

- Developing a simple animation engine inspired by Manim focused on visualizing math concepts for teaching. Built using OpenGL and Python
- Integrated text drawing, vector graphics, gradient coloring, and Venn diagrams for clear, engaging visuals

- Implemented matrix transformations and rotation by axis to showcase geometric transformations in real time.
- Built with Python and OpenGL for high-performance rendering and a smooth interactive experience.

Amazon Reviews Sentiment Analysis Project

- Developed a classifier to categorize Amazon reviews into positive and negative sentiments, providing insights into customer feedback patterns for better service optimization
- Data Processing: Leveraged natural language processing (NLP) techniques for text cleaning, tokenization, and feature extraction, improving classification accuracy.
- Machine Learning Models: Trained and tested models such as Logistic Regression, Naive Bayes, and Support Vector Machine to assess the most effective algorithm.
- Tools Used: Utilized Python's scikit-learn library for model training and evaluation, alongside Pandas for data manipulation and text processing.

Technologies

Languages: Python, Bash, Powershell, Groovy, C/C++ , JavaScript

Operating Systems and Servers: Linux, Apache, Nginx, Postfix

DevOps and Automation: DevSecOps, GitLab CI/CD, Jenkins, Ansible, Docker, Shell Scripting, Powershell, Bash

Cloud Services: AWS (S3, VPC, IAM, EC2, Route 53, CloudFront, RDS, EFS, CloudWatch, Lambda)

Web Development and Frameworks: Flask, Vue.js, RESTful APIs

Data and Databases: SQL, MySQL, SQL Queries, Data Migration

Monitoring and Analytics: Prometheus, CloudWatch

Machine Learning: SageMaker

Positions of Responsibility and Achievements

- **Guest Speaker, DevOps Career Insight Seminar:** Delivered a talk on DevOps technologies and careers for students at St. Francis College, KSIT and New Horizon College of Engineering.
- **ED Cell Coordinator:** Our team secured **8th place in Asia's largest entrepreneurship summit**, the National Entrepreneurship Challenge organized by IIT Bombay.
- **Joint Secretary, Student Council:** Coordinated events, led new club formations, and worked to make college life memorable for students.
- **Publicity Head, Odyssey:** Led the media, sponsorship, and social media teams, ensuring all tasks were completed smoothly and on time.
- **Tutor:** Tutored students in preparation for competitive exams in math and science

Education

Jain College of Engineering , B.E in CSE, CGPA : 7.6/10	Oct 2020 – May 2024
Narayana Junior College Hyderabad , Intermediate, Score : 78.5 %	May 2017 – May 2019
Parivarthan Elite Hubballi , 10th Board ICSE, Score : 73%	April 2016 – May 2017
