SUMMARY

As a Principal Software Engineer with 18+ years of experience, I have helped IT & Software companies enhance data protection, disaster recovery, and system scalability through innovative software solutions. In the last 3 years, I have reduced customer issue resolution time by 60% and eliminated the need for 2 engineers per product line by building scalable, reusable backup and restore platforms.

"I was the manager of RecoverPoint R&D and Ankita was an algorithm C++ developer in my group. I found her to be very efficient, with high standard of a "CAN DO" approach. Ankita had to face very hard support cases, analyzed and solved them. She has great communication skills which especially were shown working with the team in Israel. She has a great passion to learn new fields and expertise." – Ido Singer, Software Engineering Manager, Applied Materials, Rehovot, Central, Israel

SKILLS

Software Engineering & Architecture: System Design, High level design, Low level design, Microservices, Java, C++, Golang, Python, Design Patterns, Scalability Optimization, MVP Design, Enterprise Software, Thread-safe design and Asynchronous programming

Domain: Data Protection, Disaster Recovery, Virtualization

AI & Automation: Artificial Intelligence, Machine Learning, NLP, Feature Engineering, Automation Frameworks, Data Modelling

Soft skills: Cross-functional collaboration, Bridging gaps between teams, Mentorship, Continuous improvement mindset, Curiosity and self-driven learning

Methodologies: Test-Driven Development, Agile Methodologies, Lean Startup

EXPERIENCE

BROADCOM INC

Bengaluru

R&D Software Engineer 5 (Principal Engineer)

Aug 2021 – Mar 2025

- Optimized customer issue resolution speed to 60% by bridging the product behaviour knowledge gap between the support and engineering teams.
- Fortified full-appliance security by implementing critical configuration changes and upgrading software components to enable seamless future patching.
- Stabilized the most problematic component with a 30% reduction in issues by transforming it into the most reliable module through a loose coupling design.

- Engineered a “Common” file-based backup and restore solution that enabled each appliance team to save the equivalent of two engineers’ effort while ensuring robust data protection.
- Standardized solutions across multiple appliances by analyzing diverse requirements and extracting common, reusable designs.

DELL TECHNOLOGIES

Bengaluru

Principal Software Engineer

Nov 2017 – Apr 2021

- Accelerated local replication copy creation performance by 10% through strategic code fixes that improved system efficiency and reliability.
- Architected scalable and maintainable data path design changes by owning and leading architecture modifications aligned with long-term product strategy.
- Mitigated potential revenue loss and reputational risk by proactively collaborating with Escalation Engineering to neutralize “code red” incidents.

HEWLETT PACKARD ENTERPRISE

Bengaluru

Software Designer 5

Feb 2014 – Aug 2017

- Enhanced DB2 integration by implementing strategic design changes that improved compatibility, performance, and data handling efficiency.
- Revolutionized UI testing effort with a 64% reduction by designing and developing an Automation Test Platform from scratch, increasing test accuracy and reliability.
- Secured seed funding for two innovation concepts by delivering successful MVPs and obtaining early adopter approvals, paving the way for productization.

I have also worked at Symphony-Teleca Services, Nokia India, Sasken Communication Technologies, Eterno Infotech, and Elvic Solution in various software engineering roles from 2006 to 2014.

EDUCATION

MS – Software System

Pilani

Birla Institute of Technology and Science

2009 – 2011

BE – Computer Engineering

Gujarat

Dharamsinh Desai University

2003 – 2006

CERTIFICATIONS

- Post-Graduation Diploma in Artificial Intelligence and Machine Learning, BITS Pilani, 2020
