

EDUCATION

Bioengineering (BS) University of California, San Diego ‘13 - ‘17 | **Computer Science (BE) Bits Pilani, Pilani Campus** ‘12 - ‘13

Languages/Frameworks/Technologies

AWS, Terraform, RabbitMQ, Ansible, Python, Django, JQuery, Celery, Docker, Helm, Kubernetes, Istio, Github Actions, Redis, PostgreSQL

Publications

Choudhury, A., & Hargis, J. (April 2017). The Confusion Button: A Formative assessment to identify student misconceptions. GLOKALde 3(2).

WORK EXPERIENCE

Freelance Software Developer (Total Experience ~ 7.5 years) May ‘20 – Present

- **AccuKnox (20 months) - Technical Architect & Team Lead, Cloud Security Posture Module**→ **Helm, Kubernetes, Python, Django Rest Framework, RabbitMQ, Celery**
 - Re-architected the vulnerability scanning service turning it from one of the most unstable services to one of its most stable components.
 - Implemented a **Kubernetes** queuing service to queue **k8s workloads** at scale to make cloud account scanning robust and performant.
 - Architected the initial architecture of Accuknox’s **AI service AskADA**.
 - Led a team of 5-10 mid to senior developers (~2-6 YOE) into delivering key customer facing features and bug fixes.
 - Mentored the in-house **team** that led to **60%** of the team winning the **Engineering Employees of the month** award at different points, which was also the first time in the past 2 years that an in-house CSPM team member won anything!
- **Chainstack (11 months) - Software Engineer**→ **Kubernetes, Helm, Python, Django, Django Rest Framework, ElasticSearch, Typescript**
 - Architected and built most of the API backend for Chainstack’s first product: [Subgraphs: An indexing service for data on the blockchain](#).
 - Improved Indexing Performance of Subgraphs on the Ethereum Mainnet by a factor of 30.
 - Built a companion **typescript CLI** to allow users to interact with the subgraph service.
 - Created easy to use Rest APIs for the frontend to consume as well as a logging service leveraging ElasticSearch.
- **Okta (16 months) - Full Stack Dev + Data Engineering** → **Python, Django, Java, JS, Celery, Helm, Kubernetes, Istio, AWS, Terraform, Slack Bot**
 - Built an end to end platform to automate and manage [Sox Compliance](#) Violations pulling data from across all applications used by Okta.
 - Built ETL pipelines to move data from across various Okta Apps into an S3 bucket periodically using AWS Lambda functions.
 - Created a Slack Bot to notify admins about violations in real-time and allowed them to take action from slack itself.
 - The entire platform was hosted on AWS using 12 AWS services including AWS EKS.
 - The entire AWS infrastructure was automated using terraform and also built and maintained the entire CI/CD Pipeline.
- **Dj-Stripe (36 months) - Lead Maintainer (A Stripe Funded Library), 1 Million+ Downloads** → **Python, Django**
 - Increased monthly downloads from **20k/month** to **40k/month** in **10 months** by drastically improving code stability, developer experience while prioritizing must needed features.
 - Mentioned in Stripe’s [October ‘21](#), [November ‘21](#), [January ‘22](#), and [February ‘22](#) Developer Digests as one of their Top Open Source Contributors. [Look for arnav13081994 under the community head.](#)
- **Networkblind (12 months) - Full Stack Dev** → **Python, Django, Helm, Kubernetes, Istio, Postgres, Redis, AWS**
 - Network Blind is a platform job seekers can use to get resume and interview help from employees at dream companies of the job seeker.
 - Built a microservices architecture leveraging the Istio Service Mesh and hosted on DigitalOcean Managed Kubernetes.

Founder & CEO, Mesh Education, Qualcomm Institute Innovation Space → **Python, Django** Oct ‘16 - April ‘20
Mesh was an AI startup that **optimized presentations in real-time using ML on the presenter’s audio**. I raised about \$500,000 for our seed round and built a team of 5 full-time employees. Mesh was used by over 5,000 US Undergraduate students. I **oversaw all technical Product Development** and did development work in the space of **Natural Language Processing** including but not limited to reading and implementing research papers.

OPEN SOURCE CONTRIBUTIONS

Cookiecutter-Django → **Python, Django, Docker, Github Actions** Sep ‘20 - Present

An active contributor to Cookiecutter-django, one of the most popular Django templates. Contributions:
1) [Added Multi-stage build for building django](#). It reduced django’s docker image size by 35%

ACADEMIC HONORS

Placed 78th nationally (out of 60,000 students) and received the most prestigious fellowship in Science & Technology by the Govt of India - **Young Scientist’s Incentive Plan (KVPY Fellowship)**.
