PROFILE SUMMARY

Results-driven Certified Network Architect with 13+ years of experience specializing in network and security planning, designing, implementation, and troubleshooting. Skilled in project management, leading cross-functional teams to successful project completion. Seeking to utilize advanced certifications and proven leadership abilities to drive project success and deliver innovative network solutions. Recognized for:

- Specialized in **Cisco Nexus platforms (NX-OS, ACI, VXLAN EVPN, VPC)** and adept at leading **multi-site deployments, firmware upgrades, and network migrations** with zero business disruption.
- Proven ability to drive complex infrastructure projects using **Nexus Dashboard Suite (Insights, Orchestrator)** and **network automation tools** like **Ansible and REST APIs**
- Conceptualizing and deploying comprehensive service portfolios, optimizing DNS, DHCP, and IP Address Management with solutions like Infoblox and UltraDNS.
- Proficiency in designing and building application environments on leading public cloud platforms, including AWS, Azure, and GCP.
- In-depth knowledge of application delivery controllers, such as BIG-IP F5 LTM, Radware Alteon, and Citrix NetScaler.
- Excellence in managing Cisco Router, Enterprise Catalyst, DC Nexus Switches, Cisco ACI, and Viptela SD-WAN Solutions.
- Designing and executing strategic digital transformation plans that reduce costs, streamline operations, and drive business enablement.
- Establishing strong relationships with stakeholders, technical teams, and vendors, ensuring successful concurrent project execution.
- Expertise in IP internetworking, LAN Switching Protocols, IP Routing Protocols, and VPN Technologies.
- Architecting and implementing Network Infrastructure for Datacenters and Enterprises using CLOS Architecture (Spine and Leaf) and collapsed core in LAN, Hub and Spoke for WAN.
- Natural leadership skills with a focus on motivation and employee engagement, adept at managing diverse teams across geographies.

EXPERIENCE

Principal Consultant | INFOSYS LTD | Dec 2023 – Present

❖ **Firmware Upgrade & Network Automation Project**

For a Leading American Electronic Design Automation Company

- Led the firmware upgrade initiative for 1,010 devices across 22 Cisco ACI fabrics and 17 data centers, ensuring smooth, efficient, and non-disruptive updates with minimal downtime and business impact.
- Developed comprehensive runbooks for the firmware upgrade process, detailing pre- and post-upgrade validation, risk management strategies, rollback plans, and troubleshooting procedures to ensure a seamless upgrade experience.
- Created and maintained Ansible playbooks to automate pre- and post-upgrade checks, streamlining validation, ensuring consistent configurations, and reducing the risk of human error across the ACI fabrics.
- Used REST API calls to collect data from the ACI controller for pre- and post-upgrade checks and validation, ensuring accurate configuration verifications, firmware version checks, and network health assessments.
- Designed and implemented automation and orchestration workflows, improving efficiency and reducing manual intervention for routine tasks across the infrastructure.
- Developed patching cadence, calendars, and maintenance schedules for all data centers, including Cisco ACI fabric, Nexus standalone devices, and CIMC upgrades, ensuring timely and coordinated updates with minimal disruption.
- Conducted vulnerability assessments using Rapid7, identifying and remediating risks before and after firmware upgrades, ensuring no new vulnerabilities were introduced.
- Led CMDB validation and remediation for network-related data center assets, ensuring accurate, up-to-date asset records and proper tracking for devices across the network infrastructure. Other asset areas, such as storage and business applications, were handled by respective track SMEs.

- Spearheaded automated patch management initiatives, enhancing patch deployment efficiency and ensuring timely updates for all network devices across the infrastructure.
- Collaborated with cross-functional teams, including network, security, and operations, to ensure firmware compatibility across Cisco N9K and N5K devices, addressing challenges across legacy and new hardware.
- Provided detailed status updates, progress reports, and documentation on upgrade compliance, vulnerability remediation, and post-upgrade performance for all network devices.

Key Tools & Technologies: Cisco ACI, N9K, N5K, N2K, REST API, Ansible, Rapid7, ServiceNow, Grafana, Git, GitHub, Confluence.

❖ **Cloud Migration & Virtual Desktop Environment Migration Project**

For a Leading American Security Company

- Assisted in the migration of applications from on-premises data centers to Google Cloud, addressing critical issues as the on-premises DC cutover date approached.
- Played a key role in migrating the virtual desktop environment (VDI) from on-premises infrastructure to Google Cloud, ensuring minimal disruption and smooth transition.
- Worked closely with the client to troubleshoot and resolve migration issues, particularly around the virtual desktop environment, ensuring proper integration with cloud infrastructure.
- Provided support in configuring and optimizing Google Cloud resources to meet the needs of the virtual desktop environment, including scaling, network configurations, and security.
- Collaborated with cross-functional teams to ensure compatibility and ensure that migration plans aligned with business goals and deadlines.
- Helped develop a detailed migration strategy and timeline to ensure a seamless transition of critical workloads before the cutover deadline.
- Monitored progress, provided timely updates to the client, and ensured key performance metrics were met during the migration process.

Key Tools & Technologies: Google Cloud, VPC, Virtual Desktop Infrastructure (VDI), Palo Alto firewall, Panorama.

❖ **Operational Technology (OT) Project**

For a Leading Mining Company

- Delivered multiple OT network infrastructure projects assigned through JIRA, collaborating with the Client Manager to prioritize tasks and ensure timely execution.
- Designed and implemented network solutions for critical systems, including Collision Avoidance Systems (CAS) and Driver Safety Systems, across multiple mining sites.
- Proposed and executed the upgrade of the Driver Safety System from Version 4 to Version 5, supporting a fleet of 2,500 heavy vehicles across seven mining sites.
- Architected and deployed F5 BIG-IP LTM as a forward HTTPS and SOCKS proxy in the data center, enabling secure, scalable, and reliable communication for the upgraded Driver Safety System.
- Led the development of High-Level Designs (HLD) and Low-Level Designs (LLD), ensuring compliance with industry standards and operational goals.
- Monitored and optimized network performance while conducting risk assessments and integrating advanced security measures to enhance system reliability.
- Utilized JIRA for task tracking, progress monitoring, and cross-team collaboration, ensuring transparent project management and streamlined workflows.
- Collaborated with multidisciplinary teams, including safety engineers and IT specialists, to deliver solutions aligned with client objectives and operational requirements.
- Maintained comprehensive documentation, including network configurations, change logs, and performance reports, while providing actionable recommendations for future improvements.

Key Tools & Technologies: F5 BIG-IP LTM, HTTPS, SOCKS Proxy, JIRA, Cisco IE-3400-8T2S, Cisco NCS 5502.

Associate Consultant | HCL TECH | Jan 2022 – Dec 2023

- Supervised end-to-end IT infrastructure and application services delivery for a high-profile client, overseeing Datacenter and Enterprise network operations.
- Ensured strict compliance with quality standards, regulatory requirements, and company policies to maintain optimal network performance and security.

- Led the design and deployment of Cisco ACI, overseeing the migration of legacy infrastructure to ACI fabric.
- Successfully executed software code upgrades on critical devices, including F5, NetScaler, SD-WAN, Cisco routers and switches, enhancing network functionality.
- Oversaw the strategic scheduling of expansions and operations for the client's IP fabric network for seamless connectivity.
- Responsible for ticket resolution while consistently meeting agreed SLAs for ticket volume and response times, ensuring uninterrupted network operations.
- Led the delivery of mission-critical applications across diverse environments, utilizing ADC solutions such as Big IP F5 LTM.
- Engaged in value-added initiatives including knowledge base updates, training and mentoring junior staff, and active participation in the hiring process.
- Proficient in managing digital certificates for applications, including certificate creation, association, and distribution to load balancers (LB) for enhanced security.
- Served as a shift lead to efficiently manage and clear customers' ticket queues on the ITSM platform, addressing incidents, changes, and problems in alignment with SLA commitments to ensure seamless service delivery.

Network Engineering Specialist Advisor | NTT DATA | Apr 2021 – Jan 2022

- Implemented a scalable production network utilizing Nexus 9K/7K/2K switches in a Top of Rack Architecture, supporting rack and blade server configurations within a multi-tenancy environment.
- Oversaw the design, implementation, and migration of Datacentre and Cloud infrastructure, with a focus on optimizing performance and resolving complex technical issues.
- Resolved cross-functional technical issues across various domains, including network, server, storage, operating systems, virtualization, consolidation, middleware, applications, operations, content switching, caching, and content delivery networks.
- Managed product architecture for platforms such as VPC (Virtual Private Cloud), fabric path, STP (Spanning Tree Protocol), Datacentre Layer 2 overlays (e.g., VXLAN, EVPN, MPBGP), and Layer 2 security features (e.g., port security, MACsec, ACL, private VLANs) to enhance network security and functionality.

Manager | SAMSUNG SDS | Mar 2017 – Apr 2021

- Implemented Cisco Fabric Extender architecture to enable scalable connectivity across various network interfaces, including Gigabit Ethernet, 10 Gigabit Ethernet, unified fabric, copper, and fibre connections, catering to rack and blade servers.
- Configured and managed ACI policies, integrating network services and optimizing traffic flow for improved performance.
- Enhanced security measures by deploying SECUI firewalls in distinct zones, including DMZ, Server, and Internet zones.
- Designed and managed a robust DC Core/Aggregation/Access layer operating on a 10G backbone, supporting both production and disaster recovery environments.

Service Desk Specialist | ORANGE BUSINESS SERVICES | Apr 2015 – Mar 2017

- Provided exceptional support to corporate clients, ensuring seamless operations of IPVPN, VoIP Services, and Internet services across a global network spanning Europe, Africa, Asia and the Americas.
- Conducted troubleshooting and debugging of diverse network technologies, including LAN, WAN, IPVPN, ATM, Metro Ethernet, FR (Frame Relay), and ATM Leased Lines, resolving issues efficiently.
- Collaborated extensively with global cross-functional teams, assisting in the resolution of network challenges for various customer teams, local ISPs, and Orange, promoting effective network management and customer satisfaction.

FM Engineer | LINKQUEST TELECOM | Dec 2013 – Apr 2015

- Oversaw network planning, provisioning, and configuration for circuits with bandwidth ranging from 2 Mbps to 10 Gbps.
- Prepared and configured VNE, VCG for EPL/EVPL & EPLAN services, as well as SDH trails using the Huawei U2000 NMS.

- Monitored the TJ5100 EMS for a sub-network management system, handling multi-domain networks that included Tejas switches like TJ1600 and TJ100_ME.

FM Engineer | LEASEFORCE STAFFING INDIA PVT LTD | Jun 2011 – May 2013

- Commissioned SDH equipment including DXX, AXX, High Cap, and Ceragon at STM-1 capacity, establishing E1 trails to PDH ports for new sites.
- Performed a range of tasks, including:
 - ✓ Installation and commissioning of Ericsson BTS (2G & 3G).
 - ✓ Rerouting of E1 connections to minimize site outages.
- Managed all transmission activities encompassing microwave changeovers, hop tuning, hop upgrades, software updates, frequency and power adjustments, and analysis and rectification of radio faults.
- Reported PDH hops within the NMS framework via SDH chains for efficient monitoring.

SKILLS

- Network Planning / Optimization
- Digital Transformation
- Project Management using Agile methodologies
- Software Defined DC and WAN
- HLD and LLD Creation & Management
- Certificate Life-Cycle Management
- Network Design & Architecture
- Cloud Networking (AWS, Azure, GCP)
- Routing & Switching (BGP, OSPF, EIGRP)
- L2/L3 Network Support
- Firewall & Security Solutions (IPS/IDS)
- VPN Technologies (SSL/IPsec)
- SD-WAN & SDN Implementation
- Network Automation & Scripting (Python, Ansible)
- Network Monitoring (SolarWinds) & Troubleshooting (Wireshark)
- High Availability & Disaster Recovery
- Vendor Management & Procurement
- Service-Now for ITSM

CERTIFICATIONS

- Google Cloud Certified Professional Cloud Network Engineer (PCNE)
- Cisco Certified Network Associate (CCNA)
- Citrix Certified Associate – Networking
- Black Belt Cisco Catalyst Center Deployment Stage 1
- Black Belt Nexus Dashboard Deployment Stage 1
- Black Belt SD WAN Deployment Stage 1
- Black Belt SD WAN Support Stage 2
- Cisco Certified Network Professional (Route 300-101)
- Zscaler Private Access (ZIA) Administrator Certification
- Zscaler Internet Access (ZIA) Administrator Certification
- Black Belt ACI Deployment Stage 1
- Black Belt ACI Presales Stage 1
- Black Belt Fire Jumper FE Security Essentials Stage 1
- Black Belt Meraki Deployment Stage 1

EDUCATION

- M.B.A in Information Technology | Sikkim Manipal University | 2015
- B.Tech in Electronics and Communication Engineering | Gautam Buddha Technical University | 2011
