WORK EXPERIENCE

NextGen Healthcare Pvt. Ltd., Bengaluru
Software Engineer II

Sep'21 – Present

Key Result Areas:

- Leading the development of a mobile solution app for healthcare providers, enabling streamlined patient data recording and analysis, particularly through video consultations, to enhance the quality of care.
- Partnering with the team to seamlessly integrate doctor-prescribed medication & patient analysis into the app, ensuring a cohesive & user-friendly experience for healthcare providers & patients alike.
- Employing a diverse range of debugging tools to rectify issues during development and production, thereby fortifying the app's robustness and reliability.
- Showcasing a deep comprehension of power and its significance in the context of healthcare app development, ensuring the delivery of impactful and effective solutions.
- Orchestrating the successful integration of doctor-prescribed medication and patient analysis into the mobile solution app, resulting in a streamlined and efficient healthcare data recording process.

Project: NextGen Mobile Solutions (Formerly Entrada Inc)

Description: The NextGen Mobile Solution app serves as a productivity tool for healthcare providers in the United States. This application functions as a companion to the Electronic Health Record (EHR) system, simplifying data entry for providers by recording details of patient visits. These details are transcribed by the Speech Recognition Engine (SRE) and automatically integrated into the EHR system.

- Coroutine
- Navigation Component
- Dagger
- Bitbucket
- Picasso
- Glide
- JetPack Compose
- Cloud Message
- Push Notification
- DRM
- HLS
- Unit Testing
- Clean Architecture
- Swift UI
- IOS

Atria Convergence Technologies Pvt. Ltd., Bengaluru

Software Engineer

Aug'18 – Sep'21

Key Result Areas:

- Led the development of OTT Box, Android TV, and mobile applications, enhanced the user experience and accessibility of entertainment content.
- Contributed to the implementation of EMMC Burning tool and Launcher for Android TV applications, optimized the performance and functionality of Android TV boxes.
- Developed a live streaming mobile application for Android, ensured seamless content delivery and user engagement.
- Leveraged MVVM design pattern, Room Database, & Firebase services to enhance app performance and user experience.
- Collaborated with cross-functional teams to ensure the successful integration of Firebase analytics, in-app messaging, and cloud storage.
- Implemented robust security measures, ensured the integrity and confidentiality of user data, resulting in enhanced user trust and compliance with data protection regulations.
- Led the development of a live streaming mobile application for Android, ensured seamless content delivery and user engagement, contributed to the company's success in the entertainment industry.

Projects:

Title 1: OTT CMS Notification

Description:

Implemented a customized notification feature for customers to receive alerts about offers, live TV channel subscriptions, and app-related updates similar to platforms such as Hooq, Netflix, and Hungama.

Title 2: Live Streaming Mobile App

Description:

It is an application designed for broadcasting live television channels.

Title 3: Mobile Compatibility for various different Screen

Description:

This feature is utilized to manage the screen size and resolution of the application for both tablets and mobile devices.
