

RESUME

Bogolu Pratapareddy
RPA Developer.
UiPath Specialized Ai Certified.
Excel VBA Expert.

Mobile: +91-8074782604
pratap.bogolu@gmail.com

Career Objective:

A highly experienced and skilled **RPA and VBA Developer** with a proven track record in successful system design and implementation. Adept at creating efficient **RPA** automation solutions using **UiPath** for end-to-end process automation and **Excel VBA** for data manipulation and reporting. Capable of working independently or collaboratively within a team, with a strong ability to adapt to evolving client needs, shifting priorities, and changing deadlines. Focused on delivering high-quality, reliable solutions that enhance productivity and optimize business operations.

Technical Expertise:

1. UiPath Studio
2. Orchestrator
3. UiPath Assistant
4. Excel VBA(Macros)
5. Power Query
6. Advanced Excel
7. SQL

Professional Work Experience:

- Having 3+ years of experience in **Designing, developing, and deploying RPA workflows** using **UiPath Studio** to automate business processes such as data extraction, processing, and reporting.
- Understanding business requirements (**Process Analysis**) and translating them into functional automation solutions, defining the automation strategy and architecture for the processes to be automated.
- **Identifying** issues in existing automation workflows, **troubleshooting, debugging, testing**, and ensuring the automation works as expected.
- Working closely with **Stake Holders** or business analysts, project managers, and end-users to understand automation needs, participating in meetings to assess opportunities, and presenting solution designs.
- **Deploying** automated workflows in production environments, monitoring them for optimal performance, and continuously improving automation solutions based on feedback.
- **Monitoring** bots to ensure they function correctly, **handling exceptions**, and ensuring compliance with security and governance standards.

- Documenting automation solutions, **user manuals**, and process guides, ensuring that **documentation** remains up-to-date for handovers and future improvements.
- Staying updated with the latest **UiPath** releases and **RPA best practices**, proposing and implementing improvements to optimize processes and increase efficiency.
- Huge VBA Experience and production support work experience.
- Extensive knowledge of Excel concepts.
- Strong attention to detail and excellent organizational skills.
- Strong experience of Reporting Tools.
- Ability to analyze data, collateral documentation, and other credit issues.
- Possess Data and file extract and reformatting experience.
- Communicating with other MS Office applications like **Word, Outlook, Access** Through Excel VBA.
- Strong experience on **Web Automation** using different web Browsers like **IE, Chrome, Edge** Using **RPA**.
- Having experience in **SAP Automation** through **RPA**.
- **Outlook Automation** to Send mails without manual intervention.
- **Mail Automation** with the help of **Simple Mail Transfer Protocol (SMTP) Server** Instead of Outlook.
- Ability to create and maintain procedural documents.
- Expert in **Advanced Excel functions and formulas**.
- Designing the Dashboards for business overview.
- Having experience in macros to automate the regular tasks.
- Co-ordinate with other teams globally to understand business need and provide suitable MIS & control reports.
- Expertise in handling huge amount of Quantitative data using Excel.
- Extensively using of **Pivot Tables, Filter Keys, VLOOKUP functions, Offset, IF logics, Nested if conditions, Count if, Index, Match** etc.
- Visualizing the data by using pivot tables.
- Creating Ad-hoc report Analysis by using Pivot Tables.
- Receiving and downloading data from different sources and Cleansing and formatting data using by **EXCEL**.
- Developed report specifications based on user requirements.
- A professional, innovative, creative and self-motivated team player who can guide/lead projects independently.

Educational Qualifications:

- **B.Tech (ECE)** from JNT University, Kakinada in the year of 2016.

Work Experience:

1. Developer at EY (Bangalore) - August 2019 to May 2020

Role Overview:

As a VBA Developer at EY, you were responsible for automating business processes, improving efficiency, and developing custom solutions for clients in a variety of industries. You worked closely with the business and technology teams to design and implement automation solutions, primarily focusing on data analysis, reporting, and process optimization.

Key Responsibilities:

- Developed and maintained VBA macros to automate financial and accounting reports, reducing manual effort and enhancing the speed and accuracy of reporting processes.
 - Integrated data from multiple sources (Excel, Access, SQL databases) using VBA to streamline workflows and ensure data accuracy.
 - Analysed business processes to identify areas for improvement and automation, resulting in enhanced operational efficiency.
 - Created custom Excel-based applications using VBA, enabling users to perform complex data manipulations and analyses more efficiently.
 - Provided training and support to end-users on how to use VBA-driven automation tools effectively.
 - Worked closely with finance and operations teams to understand business requirements and develop tailored automation solutions.
 - Conducted rigorous debugging and testing of VBA applications to ensure they met client specifications and adhered to business requirements.
-

2. Developer at Genpact (Hyderabad) - March 2021 to October 2021

Role Overview:

At Genpact, you were responsible for automating internal and client-facing processes, enhancing productivity, and streamlining complex workflows using VBA. You worked on improving the efficiency of financial operations and provided technical solutions to improve the overall business process for both internal teams and clients.

Key Responsibilities:

- Developed custom **RPA**-based solutions tailored to client-specific needs, including automated reporting systems, data validation, and reconciliation processes for finance and accounting departments.
- Worked on improving manual **workflows** by automating repetitive tasks, reducing processing time, and increasing accuracy in the financial reporting cycle.
- Worked closely with business analysts and domain experts to understand requirements and translate them into technical **RPA** automation solutions.

- Implemented error handling mechanisms in **RPA Workflows** to ensure smooth execution and alert users of any issues, thus minimizing system downtime.
 - Optimized VBA code to improve performance and reduce runtime, ensuring that the tools were scalable for future business needs.
 - Developed tools for automated data extraction and reporting, including the generation of customized financial dashboards and status reports.
 - Created technical documentation and user manuals for the automation tools developed, ensuring that business users could easily understand and operate the solutions.
-

3. Senior Software Engineer at Accenture (Hyderabad) - October 2021 to August 2023

Role Overview:

In role as a **Senior Software Engineer** at **Accenture**, played a critical part in both automating business processes and developing custom automation solutions using **Robotic Process Automation (RPA)** and **VBA scripting**. I was responsible for end-to-end process automation, primarily focused on improving the operational efficiency of financial and operational workflows for global clients. Additionally, I worked on developing and optimizing VBA applications for legacy systems and other internal business needs.

Key Responsibilities:

- **Designed, developed, and deployed RPA workflows** using **UiPath Studio** to automate complex business processes across various departments like finance, HR, and supply chain.
- **Collaborated** with business analysts to understand client requirements and translate manual, repetitive tasks into automated workflows, improving accuracy and efficiency.
- Created bots for tasks such as data extraction, data entry, document processing, and report generation. Utilized **UiPath Orchestrator** for bot deployment, scheduling, and monitoring.
- Integrated automation with external systems, including **SAP, CRM, and ERP**, ensuring smooth data flow between legacy systems and newly implemented automation.
- Developed robust **error handling and logging mechanisms** to ensure smooth workflow execution and prompt issue resolution during production.
- Improved the performance of automated workflows by fine-tuning processes and identifying bottlenecks in the automation logic.
- Developed **VBA macros** to automate repetitive tasks in Excel and other Microsoft Office applications, streamlining data processing, reporting, and analytics for financial and business teams.

- Utilized **RPA** to pull data from various sources (Excel, Access, and databases) and perform automated reconciliation, data validation, and aggregation tasks.
 - Designed and implemented automated financial and business report generation systems using **RPA**, reducing manual effort and improving report turnaround time for clients.
 - Worked closely with business teams to understand specific reporting and data analysis needs, developing customized **RPA** tools to meet those requirements.
-

Projects:

Project (I): Sales Order Processing Automation

Project Overview: Automated the sales order processing workflow, from order entry to system updates and inventory management.

- **Tools Used:** UiPath Studio, SAP, Excel, Email Automation
- **Description:** Designed an automation that processes incoming sales orders from email attachments, extracts order details, and inputs the data into an SAP system for further processing. The bot then updates inventory levels in Excel and triggers automatic confirmation emails to customers.
- **Impact:** Increased processing speed by 50% and reduced order entry errors by automating manual tasks.

Project (II): Report Generation and Distribution

Project Overview: Automated the extraction of data from multiple systems, report generation, and distribution to stakeholders.

- **Tools Used:** UiPath Studio, Excel, Email Automation, SAP
- **Description:** Created a bot that pulls data from multiple systems (e.g., SAP, CRM) and consolidates it into monthly performance reports in Excel. The bot then generates charts and graphs and emails the reports to managers automatically.
- **Impact:** Reduced the report generation time from hours to minutes and ensured timely, accurate report distribution to stakeholders.

Project (III): Intercompany Moira Matching

Project Overview: Automated the sales order processing workflow, from order entry to system updates and inventory management.

- **Tools Used:** Excel VBA, Advanced Excel
- **Description:** The primary objective of this automation project is to generate accurate matching records between different datasets based on various matching criteria and boundary limits specified by the on-shore team. The datasets include premium records, claims data, and CPC (Claims Processing Center) information, where multiple types of matches (One-to-One, One-to-Many, Many-to-Many) need to be established efficiently, adhering to strict business rules and criteria.

- **Impact:** Increased processing speed by 70% and reduced Amount Matching errors by automating manual tasks.
