Architect

Seasoned Architect with over 19 years of experience in designing and delivering enterprise-grade solutions across BFSI, Travel & Hospitality, and Government domains. Adept at defining target-state architectures, modernizing legacy landscapes, and leading multi-cloud transformations on AWS and Azure. Strong understanding of TOGAF-aligned enterprise architecture frameworks, focusing on business alignment, scalability, and cloud adoption.

Key Projects Overview

Government Project (Jan 2024 – Present): Designed performance-intensive distributed systems for corporate tax filing, reducing dependency on high-end machines through efficient bespoke implementations, establishing architectural patterns for migration across systems.

Large US Insurance Client (Jan 2023 – Dec 2023): Led cloud migration and application rewrites emphasizing DevOps automation, IaC, and serverless architectures to accelerate modernization and cost efficiency.

Large US Travel & Hospitality Client (Jan 2022 – Dec 2022): Directed the legacy modernization discovery from COBOL to distributed Java-based stack, defining target-state and transition architectures with detailed discovery deliverables.

US Banking Client (Cognizant, Jan 2021 – Jan 2022): Architected operations efficiency platform within treasury management, leveraging AWS Lambda, SNS, SES, and customer proprietary infrastructure automation frameworks.

Professional Experience

Company: LTIMindtree | Role: Senior Principal Architect | Period: Jan 2022 – Present

- Leading enterprise architecture strategy and modernization initiatives across BFSI, Insurance, and Government sectors.
- Defined target and transition architectures for large-scale modernization from legacy COBOL to distributed microservices.
- Championed multi-cloud migration programs emphasizing DevOps, IaC, and serverless architectures on AWS and Azure.
- Advised on architecture governance, scalability, and performance optimization aligned to TOGAF principles.

- Mentoring teams on solutioning, NFR adherence, and cloud-native best practices.

Company: Cognizant Technology Solutions | Role: Senior Java Architect | Period: Aug 2006 – Jan 2022

Worked on modernization, digitalization, and architecture transformation programs for large US and European BFSI clients. Provided techno-functional expertise across wholesale banking, corporate banking, payments, and wealth management domains.

Key Projects Include:

- Operations Efficiencies – Treasury management modernization using AWS (Lambda, SNS, SES, CloudWatch).
- Data Services Framework – Digital data consolidation platform using Spring Boot & Azure DevOps.
- Wealth Management Americas – Legacy UI modernization to distributed microservices stack.
- Trade Clearing & Settlement – Defined productization roadmap for SaaS core platform services.
- Corporate Banking System Security – Implemented secure design patterns for BFSI applications.

Core Competencies

Enterprise Architecture • Cloud Strategy (AWS, Azure) • Legacy Modernization • BFSI Systems • Microservices • DevOps & IaC • API Governance • Data Architecture • Performance Optimization • Architecture Governance (TOGAF)

Education

Master in Computer Applications, Sinhgad Institute of Management, Pune (2006)

Bachelor in Computer Applications, Shri Vaishnav Institute of Management, Indore (2003)

Certifications & Achievements

- AWS & Azure Cloud Proficiency
- Strong Understanding of TOGAF Principles
- Cognizant Innovation Award (2012, 2nd Runner-Up)
- Sun Certified Java Programmer (SCJP)
- CCP L1 Retail Banking & L0 BFS Domain Certifications
