

DevOps & Cloud Engineer

Mobile: +91- 9550287997

Email: imranmd1709@gmail.com

Name: IMRAN

Professional Snapshot

- **5+ years experience** as a **DevOps Engineer** with exposure to Software Configuration Management, Build and Release Management, Continuous Integration and Deployment.
- Creating **CI/CD** DevOps Build and Deployment Automation – using GIT, GitHub, Maven, Nexus, SonarQube, and Jenkins Pipeline in an **AWS/AZURE** Cloud environment.
- Having good experience in **Terraform** and **Terragrunt** provisioning with Cloud for infrastructure.
- Having Cloud Expertise on AWS (**EC2, IAM, EKS, CloudFormation, Load Balancer, Lambda, S3, SNS, SQS, Vpc, CloudFront**).
- Strong experience in Containerization Tool **Docker** - Creating custom images from a **Dockerfile**, pushing it onto Private Artifactory Repositories such as Nexus and ECR.
- Working knowledge of **Branching & Merging** code lines in Git and resolved all the Conflicts raised during Merges.
- Having good working experience on **LINUX/Ubuntu/Centos** and **Windows** platform.
- Having good experience on **Jfrog-Artifactory** and **Nexus** creating **Repositories** and uploading files and **administration**.
- Having good experience on **Sonarqube** creating **projects, Qualitygate** and **administration**.
- Working with Development and Testing team to establish a build schedule, execute the builds, Writing **Scripts** for Automation and troubleshoot build failures.
- Having good knowledge on Docker Containerization and Docker files.
- Experience in configuring and updating the servers using **configuration management** tool **Ansible** and **Writing Playbooks** and **Roles**.
- Good hand on expertise in **Kubernetes** and Orchestration and Clusters.
- Having Good expertizes on deploying service on **ECS cluster** with Terraform as IaC.
- Developing Yaml files based on requirements.
- Customer-focused, organized, detail-oriented with the ability to meet deadlines.
- Managing **Cloudwatch** to monitor critical system health, performance, security.

- Having Good experience on Kubernetes and writing deployments files, Namespaces, Services, pod's and **Helm-charts**.
- Design, enable and deliver scalable, automated strategy – Infrastructure as a code.
- Managing OpenStack infrastructure as code using Terraform.
- Developing and Implementing software features using Agile Methodology.
- Enabling DevOps solutions development & deployment paradigms.
- Lead all efforts to improve processes, solutions, and configuration management.
- Responsible for application administration activities in support of development, user acceptance test and production systems supporting web-deployed applications
- Monitoring internal and production hosts using **Nagios**, and other application performance monitoring systems.
- Working with Developers and other Engineers in troubleshooting internal production issues.
- Performing network and operational tasks in the internal and production systems.
- Working with the Operations and Product Development teams in continually improving the company's automated software deployment process.
- Maintaining and evolving the security infrastructure on both internal and production environments

Educational Qualification

- B.Tech from Rajiv Gandhi University of Knowledge and Technologies (IIIT-BASAR).

Employment Details

- Worked for Metadesign solution pvt Itdd as DevOps engineer from Jan 2022 to till date.
- Working for Value Labs as a DevOps Engineer from Jan 2020 to Dec 2022.
- Worked for Genpact as a DevOps Engineer from Nov 2017 to Dec 2019

Skills Profile

Operating Systems	Windows/Linux/Ubuntu/Centos
DevOps Tools	Git,Github,Maven,Jenkins,SonarQube,Jforg,Nexus,Terraform,Ansible,Chef,Docker,Kubernetes.AEM,ELK ,Helm chart,Terragrunt.

AWS/AZURE Cloud	EC2, IAM, S3, VPC, LoadBalancer, Autoscaling, EKS, SNS, SQS,EBS, AMI,API-GW ,Cloudformation, Cloudfront, Cloudtrails and Cloudwatch ,AWS-Lamda,Azure sdk,azureNIC.Azure pipelines.
------------------------	--

Projects

Project: Zuellig Pharma
Role: Infra Engineer
Duration: Feb 2022 – till date

Responsibilities:

- Worked with **Kubernetes** to manage **Docker** containers and Implemented CI/CD allowing for deploy to multiple client Kubernetes/**AZURE** environments
- Used Kubernetes to orchestrate the deployment, scaling, and management of Docker Containers
- Debug issues in Kubernetes clusters and complex applications hosted on k8s
- Used **AKS** for Kubernetes setup and Deployed Pods onto the Cluster.
- Established infrastructure and service monitoring using Prometheus and Grafana
- Fixed bugs on the build/deploy platforms and worked closely with developers to understand their build requirements.
- Built Continuous Integration Environment (Jenkins).
- Manage **Virtual Machines** utilizing Auto Scaling, Load Balancing, and Glacier for our QA and UAT environments as well as infrastructure servers for GIT.
- Participated in all Product Releases and Patches.
- Handling manual deployments of WAR, and JAR files to various environments as part of the release process.
- Involved in merging branches, updating deployed modules, etc. during release processes.
- Responsible for manually fixing bugs and scripts on Production servers.
- Performed Hotfixes as and when required, and in odd hours.
- Deploy, maintain, and improve performance over containerized applications in EKS to support application development
- Involved in client meetings and performed some rapid actions
- Lead all DevOps efforts and manage our current DevOps team
- Work directly with Engineers and the client to develop and implement new end-user solutions that address the current business need.
- Have a clear understanding of the application development tools with the CICM infrastructure that can help optimize and scale it out accordingly.
- Responsible for application administration activities in support of development, user

- acceptance test and production systems supporting web-deployed applications
- monitoring internal and production hosts using Nagios, Cacti, and other application performance monitoring system
- Working with Developers and other Engineers in troubleshooting internal production issues.
- Performing network and operational tasks in the internal and production systems
- Working with the Operations and Product Development teams in continually improving the company's automated software deployment process
- Maintaining and evolving the security infrastructure on both internal and production environments.
- Design, enable, and deliver scalable and automated strategy – Infrastructure as a code.
- Managing OpenStack infrastructure as code using Terraform.
- Developing and Implementing software features using Agile Methodology.
- Enabling DevOps solutions development & deployment paradigms.

Project: Colfax
Role: DevOps Engineer
Duration: Jan 2020 – Feb 2022.
Synopsis:

As a multi-platform enterprise of market-leading businesses, Colfax is focused on compounding shareholder value through a relentless focus on talent, CBS continuous improvement, and investments in acquisitions and innovations that improve and expand our company. Today, our leadership team continues to embrace the Colfax Business System to propel our businesses forward and seek new strategic opportunities for growth.

Responsibilities:

- Working on DevOps infrastructure and SCM, Branching Strategy, administrations and SCM migrations.
- Preparing the Environment provisioning the environments as per the requested Applications.
- Initiating Jenkins builds and Deployments for all the applications as per the release scheduled.
- Working on CI/CD Pipelines creations and infrastructure management and Jenkins Administrations.
- Validating the failed test case and identifying the issues and working with the respective teams to fix those issues.
- Creating sonar projects for code-quality and code-coverages, Quality- gates and sonar administrations.
- Configuring Artifactory tools by using Jenkins and other build tools.
- Troubleshoot problems arising from Build and environment provision issues.
- Preparing release notes for pre-production and production environments.

- Implemented AWS solutions using EC2, S3, EBS, Elastic Load Balancer, Auto Scaling groups coordinating with developers and testers.
- Building Docker images by writing and build Docker-files, Docker Containers operations, Docker network and Docker Compose.
- Working on Kubernetes on Kubernetes and writing deployments files, Namespaces, Services, pod's and Helm-charts.
- Giving demo sessions on new implementations, automation and EMM updates.

Project: Circor
Role: DevOps Engineer
Duration: Nov 2017 – Dec 2019.
Synopsis:

CIRCOR is a world leader in the development, engineering, manufacturing, distribution, service and support of fluid handling systems. With a history dating back to 1860, CIRCOR serves a wide range of industries including oil and gas, commercial marine, defense and power generation. We also produce well-known global brands like Allweiler, Imo, Houttuin and Warren. These top product brands, along with our industry leading pump technology, work together to provide the best and most reliable solutions for our customers.

Responsibilities:

- Working as a DevOps Engineer responsible for defining the workflow process for application Code movement from Dev to Prod.
 - Implementing Dev, Staging and Production environment, with all components, completely automated.
 - Carryout Weekly and Monthly PROD Deployments for existing services.
 - For new services, setting up AWS region from scratch till production release using Cloud formation, EC2, Route53, Auto scaling, ELB, VPC, S3
 - Creating clusters using Kubernetes and worked on creating many pods, replication controllers, deployments, labels, health checks and ingress by writing YAML files. Build engineering automation and productivity tools to streamline deployment pipeline.
 - Working with source code management tool like Git. Involved in Branching, Tagging and Merging of code delivery at required releases.
 - Build the packages from source code using Maven.
-
- Working with Jenkins to setup master and slave nodes for various deployments.
 - Implemented a continuous delivery pipeline with Docker and Jenkins.
 - Build the Docker images based on custom Docker files.
 - Knowledge on container orchestration tool like Kubernetes.
 - Automation of compilation, continuous integration, testing, packaging and distribution of software.
 - Good working knowledge on Linux environment and trouble shooting skills.
 - Good working knowledge AWS IAM Service: IAM Policies, Roles, Users, Groups, AWS

Access Keys and Multi Factor Authentication.

- Work closely with developers to integrate and constantly refine development process into CI/CD pipeline.
- Coordinate/assist developers with establishing and applying appropriate branching, labeling/naming conventions using GIT source control.
- Implemented the CICD process using Jenkins pipeline code, Git, Docker Registry and Kubectl.
- Created the services on top of the Kubernetes cluster and each task definition are associated with the service.
- Monitoring and troubleshooting the containers specific issues across the environments.

Declaration

I hereby declare that the above-mentioned information is true to the best of my knowledge.
