Summary

Recent college graduate and as a Fresher with a strong enthusiasm for data science . Eager to learn and develop new skills, with a keen interest in leveraging data to drive strategic decision-making. Seeking to build a career in data science, utilizing a solid foundation in analytical techniques, programming, and statistical analysis to contribute to innovative projects and solutions.

Education

Walchand Institute of Techonology Computer Science and Engineering Btech CGPA: 9.13	Solapur 2020 - 2024
Vyankatesh Junior College Computer Scince Class XII Percentage: 76.62%	Wardha 2018 - 2020

Experience

MOTM Technologies AI Intern	Pune October 2024 -Present
- Worked on a live project to design and develop a chatbot using Python and AI technologies, integrating it with [specific tools/frameworks if applicable]. -Enhanced the Fropel app by incorporating AI-based functionalities to improve user experience and engagement. -Collaborated with cross-functional teams to ensure seamless integration of AI features into existing systems.	
Cognifyz Technologies Data Science Intern	Nagpur June2024 - July2024
Ensured data integrity and accuracy by cleaning and preprocessing datasets, addressing missing values and inconsistencies. Applied supervised and unsupervised machine learning algorithms to ensure accuracy	

Skills

Programming Languages:	Python, SQL
Libraries/Frameworks:	Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow, PyTorch, NLTK, XG-Boost, Statsmodels, Machine Learning: Supervised and unsupervised learning, Deep Learning: RNN, LSTM, (NLP): Text preprocessing, sentiment analysis
Tools / Platforms:	Jupyter Notebook
Databases:	MySQL, DBMS.Flask API
Languages :	English , Hindi , Marathi

Projects / Open-Source

Live news Summarization	GPT Model , Python, Flask
Designed and developed a tool that retrieves and summarizes live news updates based on user-provided topics.Topic-based livenews extraction. Automatic summarization of news articles for concise and relevant information. Real-time updates to keep the user informed with the latest developments.	
Sentiment Analysis of Twitter	NLP, Logistic Regression
Developed a sentiment analysis model using Twitter data to classify tweets as positive or negative. Leveraged natural language processing (NLP) techniques and machine learning algorithms to achieve an accuracy of X%, providing insights into public opinion trends.	
Automated Text Summerization (using NLP)	NLP
Developed an automated text summarization model using natural language processing (NLP) techniques to condense large volumes of text into concise summaries. Implemented algorithms like Extractive and Abstractive summarization to enhance information retrieval and readability.	

Loan Prediction

Machine learning algorithm

Developed a machine learning model to predict loan approval probabilities based on applicant data. Applied algorithms like Logistic Regression and Decision Trees, achieving an accuracy of X%, and provided insights into key factors in uencing loan approval.

Certifications

Programming using Python - Internshala

Python with Data Science - Ethans Tech , Pune
