

ROHIT SINGH

AI Lead specializing in Generative AI, Personalization and Search.

9175504535 | rs28058@gmail.com | [LinkedIn](#)

SUMMARY

As Lead Data Scientist with over 6 years of experience, I'm at the forefront of AI innovation in travel, retail, finance and e-commerce. My expertise lies in leveraging cutting-edge technologies to solve complex business challenges and drive data-informed decision-making.

Key areas of focus:

- Large Language Models (LLMs): Conducting advanced research and development in both open-source and proprietary LLMs, pushing the boundaries of LLMs via finetuning.
- Retrieval-Augmented Generation (RAG): Pioneering work in enhancing LLM capabilities through innovative RAG techniques, improving context-awareness and factual accuracy in AI-generated data extraction.
- AI Agents: Research into autonomous AI agents, exploring their potential for complex searching and task automation across various domains.
- Advanced AI & Machine Learning: Proficient in developing sophisticated models using Python, Keras, TensorFlow, and other state-of-the-art tools.

SKILLS

Generative AI

LLMs | Mistral Model | OpenAI Model | Lamma Family | LlamaIndex | Langchain | Finetuning | RAGs | AI Agents

Programming

Python | TensorFlow | Keras | Django | Pandas | NumPy | Scikit-learn

Machine Learning & AI

Regression | Classification | Clustering | Feature Engineering | Model Optimization | Neural Networks | CNNs | RNNs | Natural Language Processing (NLP) | Image Processing & Classification

Cloud & Deployment

AWS SageMaker | AWS Rekognition | S3 | EC2 | AWS Polly | AWS Redshift | Vertex AI | GCP | Databricks | Snowflake

Databases

SQL | NoSQL

Visualization

Tableau | PowerBI | Telius

WORK EXPERIENCE

Lead Data Scientist

February 2023 - Current

Adventure India

- Spearheaded AI-driven travel personalization, boosting user engagement and conversions through advance AWS Personalize service and custom recommendation algorithms.
- Implemented LLM-powered hotel review classification and tag generation, enhancing search accuracy through few-shot learning and API integration.
- Developed an AI hotel Agent by fine-tuning (SFT Method) a large language model for personalized guest assistance.
- Guided and inspired team members in creating an AI-powered Online Travel Agency (OTA), utilizing cutting-edge AI ML and NLP to revolutionize travel booking.

Senior Consultant, Data Science & Engineering

October 2021 - February 2023

Alliantgroup India Talent Private Limited

- Engineered and deployed an LSTM-based NLP model to evaluate dialogues on a BD consultant-prospect communication platform, assessing the likelihood of successful engagement based on textual interactions.

- Implemented a Random Forest model to forecast lead revenue, enhancing BD team's leads prioritization strategy.
- Enhanced the lead qualification workflow using Selenium-based automation through LinkedIn and Google, leading to a 50% reduction in manual effort and significantly boosting MQL evaluation effectiveness.
- Analyzed CPA firm interactions using ML to identify unsuccessful lead patterns, refining Business Development strategies.

Business Analyst

January 2021 - October 2021

SP Software Private Limited

- Developed an anomaly detection model leveraging financial investment data across various government departments to recognize abnormal patterns in financial transactions.
- Designed and executed an investment forecasting model customized to project investment requirements for each department, analyzing different growth patterns.
- Partnered with the CFMS (Comprehensive Financial Management System) development team to create data pipelines and render insights within the application.

NLP DEVELOPER

May 2019 - December 2020

My Next Film

- Designed an NLP module that utilized the SPACY large model to analyze movie scripts, extracting crucial elements such as slug lines, action sequences, dialogues, speakers, and other relevant details.
- Constructed a comprehensive Narration Room for scriptwriters and filmmakers using libraries like MoviePy, FPDF, and Pillow, and matched voices for characters from a database containing over 400 options based on various traits.
- Deployed a sequence-to-sequence (seq2seq) LSTM model to evaluate sentiment expressed in dialogues.
- Integrated cost-efficient digital payment gateways including Razorpay for Indian clients and Stripe for international clients, streamlining membership services on our SaaS platform.

EDUCATION

Giani Zail Singh College of Engineering and Technology, Bhatinda

2019

B.Tech/B.E.

STARTUP

Botics Ai

Founded Botics Ai, an innovative startup dedicated to providing AI-driven solutions for enhancing customer engagement and digital marketing strategies.

PROJECTS

Intelligent Document Processor

March 2024 - June 2024

Developed an AI-powered document processing system using LlamaParser and OpenAI's GPT4-0. This system automatically classifies input documents, extracts relevant information based on the classification, and populates a database accordingly. The workflow streamlines document handling by combining advanced few shot LLM for classification with targeted information retrieval and structured data storage.
