

Name: Rohith M.

Github: <https://github.com/RohithM191>

Email-Id: rohithpython88@gmail.com

Phone No: 7981260483

Career Objective:

To obtain a position that will allow me to utilize my skills, experiences, and willingness to learn in making an organization successful.

Organization(Dec 2022 - Nov2024): Foray Software

Designation: Software Development Engineer.

- Expertise in building dynamic Single Page Applications with the **MERN** framework.
- Implemented **React & Redux** component-based architecture with reusable and modular components, enhancing maintainability and reducing development time.
- Integrated RESTful APIs, **GraphQL** endpoints, and **Nodejs** backend services into frontend applications, enabling seamless communication with backend servers and efficient data retrieval and manipulation.
- Designed and implemented efficient algorithms to solve complex computational problems, achieving up to a 30% reduction in runtime.
- Designed and implemented microservices architecture, breaking down monolithic applications into independent, deployable services, enhancing scalability and fault tolerance.
- Took up the role of Team leadership in responsible for supervising project deadlines and allocated tasks.

Organization(May 2021 - Oct 2022): Accion Labs

Designation: Software Development Engineer (SDE-II).

- Expertise in building dynamic Single Page Applications with the **MERN** framework.
- Developed type-safe applications using TypeScript's static typing and interfaces.
- Implemented server-side logic using **NestJs**, ensuring efficient performance and security.
- Built custom **Data structures** like segment trees and tries to optimize query-based applications, enhancing processing efficiency.
- Designed a fault-tolerant system with automated failover mechanisms, ensuring uninterrupted service for 10,000+ users.
- Designed and implemented microservices architecture, breaking down monolithic applications into independent, deployable services, enhancing scalability and fault tolerance.
- Took up the role of Team leadership in responsible for supervising project deadlines and allocated tasks.

Organization(Sep2020- May2021): Delaplex

Designation: Software Development Engineer

- Implemented React component-based architecture with reusable and modular components, enhancing maintainability and reducing development time.
- Migrated large-scale JavaScript codebases to TypeScript, enhancing type safety, readability, and maintainability.
- Developed and maintained backend services using Node and **Python**, ensuring high performance and reliability.

Organization(July 2017-sep 2020): Spritz Technology

Designation: Software Development Engineer(SDE).

- Worked on the MERN stack to create robust authentication and authorization techniques using JWT, implementing secure verification processes on the website. Leveraged ReactJS for dynamic front-end development, Node.js and Express for backend services, and **MongoDB** for data storage.
- Familiar with databases including MySQL, Postgres, and MongoDB, enabling efficient data storage, retrieval, and management within software applications.
- Optimized application performance through efficient code, caching strategies, and server-side rendering (SSR) for faster load times.
- Implemented authentication and authorization systems using **JWT**, OAuth, and session management to ensure secure access to resources.

TECHNICAL SKILLS:

- **Programming Languages:** JavaScript(ES6), DSA, System Design, **ReactJs, Retool, NodeJS, Redux**, React Native, TypeScript, **MicroService, GraphQL**, GraphQL server, apollo-server Next.js & Python.
- **Web Technologies:** HTML5, CSS3, SASS, JavaScript, TypeScript, Restful API, AJAX, JSON, Azure, AWS, .Net, Sonar cube, Kubernetes, Next JS & Nest.js
- **Development tool:** Eclipse, VisualStudio, Jira tool, Redux-devtools & Github.
- **Debugging tools:** Jest, Chrome-developer Tools, IntelliJ.
- **Frameworks:** React JS, .Net Core, Vue.js, three.js, Phaser3 & Express.js.

Projects:(Fullstack[Frontend& backend])

Wayfair

Description: wayfair is a dynamic software product designed to enhance operational efficiency, data visualization, and workflow automation for state school agencies, leveraging tools like Retool and robust backend systems built with Node.js.

Project Involvement:

- Developed and deployed Retool applications to streamline lottery operational tasks, creating custom dashboards for tracking ticket sales, financial reporting, and compliance monitoring.
- Built Node.js-based backend services, enabling real-time processing of lottery data and ensuring seamless integration with APIs and databases.
- Designed and implemented custom Retool components for internal team use, enhancing data accessibility and workflow automation.
- Developed unit and integration tests using **Jest** to ensure the reliability and stability of both frontend and backend components.

TeleMed2U

Description: TeleMed2U is a multi-specialty group of board-certified physicians that supplies its clients with real-time access to interactive video calling consultations with doctors and multiple patients.

Project Involvement:

- Developed the video calling application using Twilio and React.js, incorporating Redux for state management and TypeScript for enhanced type safety.
- Utilized graph-based algorithms to manage the real-time connections between multiple users in the Socket.io nodes.
- Built GraphQL resolvers that aggregate data from multiple data sources, including microservices and third-party APIs, to provide seamless, unified responses.
- Set up **Apollo Engine** or **GraphQL metrics** to track query performance, user interactions, and API errors, driving data-informed improvements in the server's operation.

Match Square

Description: Match Square is a B2B e-commerce wholesale marketplace that provides a curated product experience for the business community who want to sell new and unique products.

Project Involvement:

- Designed and developed high-level web designs for product listing pages using React.js and Redux, incorporating TypeScript for improved code quality and maintainability.
- Created custom reusable components for the application across multiple areas, utilizing Node.js and GraphQL to optimize data fetching and server-side processing.
- Applied pattern-matching algorithms to handle and categorize GraphQL errors for effective debugging and resolution.
- Created custom middleware for **GraphQL** to handle logging, error tracking, and security concerns. Streamlined backend processes for better performance and maintainability.
