SUMMARY

Embracing challenges as opportunities to learn, I collaborate as a software engineer to drive growth and foster win-win outcomes for all.

EXPERIENCE

Recro- Software Engineer

09/2022 -Present

- **Native iOS Apps Development using the Swift Framework:**
- Developed an iOS app from scratch using SwiftUI, delivering an intuitive, user-friendly experience.
- Used Grand Central Dispatch (GCD) for multithreading, ensuring smooth performance and responsiveness.
- Applied the Combine framework for reactive programming, streamlining asynchronous tasks and state management.
- Implemented the MVVM architecture for scalable, maintainable code with a clear separation of concerns.
- Wrote unit and UI tests with XCTest, improving code quality and reliability by catching bugs early.
- Integrated real-time data updates with Sockets for continuous data fetching.
- Deployed the app to the App Store and TestFlight for beta testing and user feedback.
- Integrated Firebase for Crash Analytics and Google Analytics for user event tracking, providing insights into app performance.
- Used RESTful APIs for seamless frontend-backend data synchronization and real-time updates.
- Experienced with Git for version control and Trello for task management and documentation.
- Actively participated in Agile ceremonies, contributing to team collaboration and continuous improvement.

Technology Used: Swift, Firebase Crash analytics & analytics

Terrific Minds - Software Engineer

07/2022 - 7/2024

- **Native iOS Apps Development using the Swift Framework:** Developed native iOS apps using Swift framework :- UIKit, and SwiftUI, creating intuitive UIs and efficient data management. Used Grand Central Dispatch (GCD) to manage multithreading and improve responsiveness, and Combine for reactive programming to streamline async tasks and state management. Applied MVVM for scalable, maintainable code and better separation of concerns between UI and business logic. Wrote unit and UI tests with XCTest to ensure code quality and reduce bugs. Integrated apps with RESTful APIs for seamless data exchange and real-time updates.
- **Backend Development with Spring Boot:** Developed a backend system using Spring Boot, following a layered architecture to ensure modularity and maintainability. The system integrated MySQL for efficient database management, optimizing queries for smooth data flow. Implemented an authentication module with Spring Security, enabling role-based access and JWT for secure API communication. Designed a custom login system with features like password recovery, account lockouts, and secure session management. Integrated Spring Mail for automated email notifications. Built a report generation module with Excel and PDF export capabilities. Developed RESTful APIs for frontend-backend communication and real-time data updates. Leveraged Spring Boot's dependency injection throughout the architecture to ensure scalability, testability, and loose coupling between layers.
- Proficient in Git for version control and experienced with JIRA for task management.
- Actively participated in Agile ceremonies, contributing to team collaboration and efficient project delivery.

Technology Used: Swift, Java, SwiftUI, UIKit, SpringBoot

Trizlabz -Intern

06/2021 – 06/2022

- **Autonomous Robot Map Development & Dashboard Design:**
- Developed a mapping system for an autonomous robot, enabling accurate spatial awareness and navigation within dynamic environments.
- Designed and executed a user-centric dashboard interface for seamless monitoring of critical parameters essential for autonomous robot operations.
- Implemented intuitive data visualization techniques to present real-time information on battery status, fan speed, and other key metrics, facilitating prompt decision-making and maintenance interventions.

- Utilized JSON API calls to efficiently retrieve and process sensor data, ensuring seamless integration with the dashboard interface.
- Implemented CI/CD pipelines to streamline the development and deployment process.
- Led sprint planning and execution, utilizing Jira to track progress and manage tasks effectively.

PERSONAL PROJECTS

- **Finanze (iOS):** Developed an expense tracker using SwiftUI to help users manage their expenses and income transfers. The app enables easy transaction logging, categorization, and provides financial summaries to track spending patterns. With its user-friendly interface, it offers a smooth experience for budgeting and effectively managing personal finances.
Technology Used: SwiftUI, Core Data
- **Sharelink (iOS):** Developed a shared link feature within a SwiftUI project for iOS 14 compatibility. Users can seamlessly share content across multiple platforms.
Technology Used: SwiftUI
- **App Icon Generator(mac OS, iPadOS, and iOS):** Created a SwiftUI application designed to generate app icons for various Apple platforms. Conducted testing to ensure functionality on iPhone, macOS, and iOS devices.
Technology Used: SwiftUI
- **Todo (WatchOS):** Developed a todo list application for WatchOS using SwiftUI, incorporating functionalities such as task addition, deletion, and completion tracking.
Technology Used: SwiftUI
- **2D Game (iOS):** Created a 2D iOS game using Swift UI, inspired by Flappy Bird. Introduced a helicopter as the central character, adding diverse obstacles and collision detection mechanisms.
Technology Used: SwiftUI

TECHNICAL SKILLS

Languages: Swift, Java, Javascript

Technologies: SwiftUI, UIKit, SpringBoot, HTML, CSS, Flutter

Other: Problem solving, Data structures and algorithms, Object Oriented Programming.

EDUCATION

- **Bachelor of Technology, Electronics & Communication**
Govt. Model Engineering College | CGPA: 7.6

ACTIVITIES & ACHIEVEMENTS

- Participated in the Swadeshi Microprocessor Challenge 2020, conducted by the Ministry of Electronics and Information Technology, Government of India.
- Writes Medium blogs on software development, aiming to facilitate easy learning.
