

SANJAY KUMAR SETHI
AI DEVELOPER

BHUBANESWAR, ODISHA

Mob : 7077237668

Email : sethisanjay237@gmail.com

EDUCATION

B.TECH in Mechanical Engineering
BPUT, Odisha
2014 – 2018

SKILLS

LANGUAGE : PYTHON.

FRAMEWORK : FLASK, DJANGO.

FRONTEND : HTML, CSS, BOOTSTRAP.

DATABASE : MySQL, POSTGRESQL.

VECTOR DB : CHROMADB, PINECONE,
FAISS, WEAVIATE.

VISUALIZATION : MATPLOTLIB, SEABORN.

LIBRARIES : NUMPY, PANDAS, REGEX, NLTK
SCIKIT-LEARN, TENSORFLOW,
KERAS.

CLOUD : AWS, GCP.

Artificial Intelligence, Machine Learning, Deep Learning, Generative AI,
Large Language Models, Natural Language Processing, Hugging Face,
LangChain, Finetune, RAG, Chunking, Tokenization, Wordembedding,
Transformer, Quantization, Prompt Engineering, Docker, GitHub.

EXPERIENCE

Odisoft Technology Private limited, Odisha

ROLE : AI Developer

DURATION : Dec. 2021 - Present

- Develop AI models that address specific business challenges. Evaluate and refine models based on performance metrics and feedback from stakeholders.
- Work closely with IT teams to ensure seamless integration of AI solutions within existing infrastructure. Oversee the deployment process and address any technical challenges that arise.

Hindustan Aeronautics Limited (HAL), Odisha

ROLE : GRADUATE APPRENTICESHIP TRAINING

DURATION : 01-SEP-2018 to 31-AUG-2019

PROJECTS

ChatBot

- The chatbot serves as a comprehensive information hub providing detailed insights about the organization. Beyond basic inquiries, it seamlessly facilitates meeting bookings and connects users with relevant team members for project discussions. Leveraging advanced functionality, the chatbot integrates seamlessly with HubSpot, automating lead generation and efficiently handling customer intention notes.
- This innovative solution not only enhances user experience but also contributes to optimizing the customer relationship management workflow of the organization.

Text summarization using Hugging face Transformers

- End-to-End Text Summarization with Transformers: Built a web application using Flask for text summarization.
- Deep Learning Expertise: Leveraged Hugging Face Transformers for model development, used TensorFlow and Keras in backend of the library.
- Fine-tuned Pre-trained Model: Successfully fine-tuned the Google Pegasus model on the SAMSum dataset for summarization.

Insurance Inquiry Text Classifier

- Insurance companies encounter a wide range of inquiries from users including questions about policy coverage, claims processing, premium payments and policy renewals. Manually sorting through these inquiries and directing them to the appropriate departments can be time-consuming and resource-intensive.
 - By implementing a text classification system, this project aims to automate the categorization of user inquiries, facilitating faster resolution and more efficient customer service.
-
