EDUCATION

Vivekananda Institute of Professional Studies - Technical Campus

New Delhi, India

Bachelor of Technology in Artificial Intelligence and Data Science

2021 – 2025

EXPERIENCE

Software Developer Intern (Backend)

Aug 2024 – Present

Unthinkable Solutions

Gurugram

- Designed and implemented scalable backend systems using Node.js, Express, MongoDB, and PostgreSQL to support robust application functionality.
- Leveraged Node.js clusters to enhance scalability and ensure efficient handling of concurrent requests.
- Developed an in-house code execution platform from scratch, ensuring it met high-performance standards and aligned with the company's objectives.
- Utilized Docker to containerize services, ensuring smooth deployment and sandboxing of code.

Software Engineer Intern

May 2024 – June 2024

ZeroBug

Gurugram

- Developed responsive UI for web, app, Linux, and iOS platforms using Flutter and Firebase.
- Assisted in planning and managing ship voyages, including route optimization, fuel management, and scheduling.
- Utilized Riverpod for state management and GoRouter for navigation.
- Utilized Flutter for the frontend and Firebase for backend services to develop and enhance the app.

Machine Learning Intern

Dec. 2023 – Jan. 2024

DRDO (Defence Research & Development Organisation)

New Delhi

- Implemented and optimised computer vision algorithms using TensorFlow.
- Conducted data preprocessing and augmentation to improve model robustness and accuracy.
- Execution of experiments to evaluate and fine-tune neural network model.

PROJECTS

LinkUp | *Flutter, Firebase, FCM, Git, Provider*

- Developed a chat app using Flutter and Firebase.
- Implemented real-time messaging with Firebase Cloud Messaging (FCM).
- Added user management features like reporting and blocking users.
- Ensured seamless communication with real-time updates

Face Mask Detection | *Python, OpenCV, TensorFlow, Keras, Git*

- Developed and implemented a real-time mask detection system using the VGG16 deep learning architecture.
- Engineered real-time video processing with OpenCV, enabling instant predictions on live camera feeds.
- Attained an outstanding model accuracy of 96%, showcasing the effectiveness of the VGG16 deep learning architecture in precise and reliable mask detection.

TECHNICAL SKILLS

Technologies: Node.js, Express, React.js, Tailwind CSS, Flutter, Firebase, Machine Learning, Deep Learning.

Proficient in: JavaScript, Java, Python, Dart, Linux, Tensorflow, MySQL, PostgreSQL, MongoDB, Knex.js, Mongoose, Prisma, Cloudflare Workers, TypeScript, Kafka, PubSubs, WebSocket, HTML, CSS, Amazon Web Services(AWS), Docker, Problem Solving.
