

SHIAK MAHABOOB BASHA

Mail: mahaboobbasha6912@gmail.com

Mobile No: 6301916912

Fast-paced software professional with 6+ years of IT experience in industry comprising of Linux System Administration, DevOps Engineering and in automating, building, releasing of code from one environment to other environment and deploying to servers. Extensive experience includes Docker, Kubernetes, GIT, Azure, Nexus Repo, Build/Release Management and Cloud Management and Containerisation and Databases.

PROFESSIONAL SUMMARY:

- Working Experience with CI and CD using tools like Jenkins, TFS, Azure DevOps, GIT, MSBUILD, Builds, Microsoft AZURE and Docker and Azure Kubernetes Service (AKS).
- Extensive experience working with various cloud hosting platforms and services, particularly Azure and AWS.
- Proficient in containerization using Docker, including creating, managing, and deploying containers.
- Experience in setting up CI/CD processes using tools like Jenkins, along with experience in scripting for automation.
- Strong background in infrastructure automation, security, and networking best practices and implementation.
- Configuring, Implementing, Deploying and Maintaining, Azure DevOps, Build & Release, provision the Infrastructure of Microsoft Azure services like IAAS and PAAS Activities.
- Creating and configuring the Web App and Function App in DevOps.
- Good Experience in creating and maintaining the source code with Branching Strategy in Git hub and Bitbucket.
- Creating and Configuring Web App with Build Pipeline's and Release Pipelines.
- Working Experience with YAML for CI-CD in Azure DevOps.
- Developed custom automation build system using Azure DevOps
- Good Experience in Infrastructure as code with ARM Templates.
- Proficiency in configuration of .NET applications and Java application in Azure DevOps.
- Good experience in Managing Azure services and subscriptions using Azure portals and managed Azure resources to Azure Resource Manager.
- Experience in implementing and deploying workloads on Azure VM.
- Updated bugs and user stories in DevOps portal to reflect deployment information when pushing or releasing code and collecting them with other information into release notes.
- Responsible for deploying the arm templates for deploying several components.
- Responsible for rotation of the certificates.

- Responsible for updating secrets in the Bitbucket and AKS.
- Deployed all the infrastructure components with the arm templates and power shell.
- Ability to pick up new tools/projects quickly.
- Effective in working independently and collaboratively in teams.
- Have knowledge on Azure Kubernetes, Dockers, Jenkins and Spinnaker.

Cloud Environments	Azure Cloud
SCM Tools	Git, Azure Repo, Bitbucket, GitHub
CI-CD Tools	Jenkins, Azure DevOps, VSTS, Spinnaker
Build tools	Maven, MS-Build
Automation Tool	Ansible, CloudFormation, ARM templates, Terraform.
Deployment Tools	Azure-DevOps, Spinnaker
Monitoring Tools	CloudWatch, ELK (Elastic-search, Kibana), Azure monitoring service
Container Tools	Docker, Kubernetes, AKS.
Ticketing Tool	JIRA, ITService portal, Azure Boards, ServiceNow
Scripting	Shell, YAML, PowerShell, JSON, Bash.

EDUCATION:

- M.Tech from GITAM University in 2016.

WORK EXPERIENCE:

- Working as a Site Reliability Engineer at Wipro from October 2021 to February 2024.
- Worked as Analyst at Teleperformance from November 2020 to October 2021.
- Worked as a Software Engineer at Benerg from February 2017 to October 2020.

PROJECT PROFILE:

Project Name : Estee Lauder Companies (ELC)

Role : Azure DevOps Engineer

Technologies : Azure, Azure-DevOps, GIT, Bitbucket, PowerShell, Jenkins, Ansible, Jira, ServiceNow Docker, Azure Repo, Kubernetes, Spinnaker.

Roles and Responsibilities:

- Worked in highly collaborative operations team to stream line the process of implementing

security Confidential Azure cloud environment and introduced best practices for remediation.

- Gathering the requirements from the clients about the existing applications to apply the security measures.
- Created builds and release pipelines in Azure-DevOps and done deployments using SPN (secure endpoint connection) for implementing CI-CD.
- Integration Azure-DevOps Pipeline to security Tools.

Security Tools:

1. Nexus-IQ
 2. SonarQube
 3. Shift-Left
 4. Aqua
- Experience on Azure-DevOps Pipeline to deploy in AKS and VM's.
 - Domain configuration of Application gateway. (Load-Balancer)
 - Domain mapping, collaborated with cross functional teams (firewall team, application team) in execution of this project.
 - Domain Certificate renewing process.

Project Name : Valero Energy
Role : DevOps Engineer
Environment : Linux, Git, Maven, SonarQube, Jfrog, Jenkins, Tomcat, Ansible, AWS.

Description:

Valero Energy Corporation, a Fortune 500 company headquartered in San Antonio, Texas, is an international manufacturer and marketer of transportation fuels, petrochemical products, and power. The company owns and operates 16 refineries across the United States and is one of the largest retail operators with approximately 6,800 retail and branded wholesale outlets nationwide. The IT environment consists of Red Hat and MySQL servers, encompassing production, test, and development environments. With over 40,000 users and numerous Linux-based internet, intranet, and extranet sites, this project supports pre-sales activities and assists other delivery teams.

Roles and Responsibilities:

- Installing and configuring GIT, Jenkins, Deployment and automation.
- Release Engineer for a team that involved different development teams and multiple simultaneous software releases.
- Developed and implemented Software Release Management strategies for various applications according to the agile process.
- Identity root cause, and resolve problems.
- Maintaining the source code in GIT for various applications.
- Administered merge, build and deployment of the codes to all the environments.
- Responsible for creating the branches and tagging the code.
- To configure and maintain codebase to support the build and deployment of code on servers.
- Supporting the developers in configuration management environment.

- Responsible for the Plug-in Management, User Management, Build/Deploy Pipeline Setup and End- End Job Setup of all the projects.
- Jenkins is used as a Continuous Integration tool for automation of daily process.
- Involved in the release process and deployed applications (WAR and JAR) to the Tomcat.
