

Oracle Developer (SQL, PL/SQL)

Vijay Kumar. Mudigonda

Email : vijay.mike.db@gmail.com

Mobile : 9392645519

Career Objective

Skilled SQL Developer with experience in managing databases, writing efficient queries, and optimizing performance. Looking for an opportunity to apply my expertise in data management and problem-solving to support business growth with reliable and well-structured database solutions.

Professional Summary

3 years of total professional experience, including:

- **3 years of experience as an SQL Developer**, working with **Bank of Baroda (UK)**, **National Bank of Bahrain (NBB)**, and **Albilad Capital** on projects involving data analysis, database management, and banking applications, database work in developing work.
- Exposure to support works in **Banking & Employee data** Domain.
- Experience in writing SQL Queries, making changes in Procedure, Function, Cursors, triggers and Exception Handling.
- Involved in analysing the project requirements.
- Worked in UNIX environment for uploading files into application by executing bash files.
- Implemented the modules of the applications within the stipulated timeline.
- Excellent experience in dealing with the client requirements.
- Good experience in deployment of applications using Web logic / Web Sphere application Servers.
- Active participation in review meetings to understand the requirements of business users.
- Ability to meet deadlines for completing individual team tasks in a timelier manner and highly flexible team player.
- Self motivated, hard working and goal-oriented with disciplined approach and Good interpersonal skills.
- Proficiency at grasping new technical concepts quickly and utilizing the same in a productive manner.

Technologies

- Operating Systems : Windows XP, Windows 7, UNIX.
- Servers : Web Logic , Web Sphere, SQL
- Database : Oracle 11g/12c
- Tools : SQL Developer, PL/SQL Developer, Putty, Winscp, Auto cad

Educational Qualification

- **B. Tech** in USHA RAMA College of engineering (JNTUK) with 60 percentage .

Technical Skills:

- Extensively worked on
 - Standalone Procedures
 - SQL reporting
 - Patch management.
 - Functions .
- Experienced working with Packages, Triggers.
- Very good working Knowledge on **SQL QUERIES**.
- Good Knowledge in **JOINS**.
- Experience in **UNIX** environment
- Good knowledge of key Oracle performance related features such as **Query Optimizer**, **Execution Plans** and **Indexes**.
- Worked on debugging complex SQL Queries.
- Strong knowledge in Oracle Utilities like SQL*Loader, Export/Import Utilities.

Work Experience:

Project : Anti Money Laundering. (DHANI INFO SOLUTIONS Pvt Ltd)

Client : NATIONAL BANK OF BEHRAN (AUG 2024 – TILL DATE)

Description

Amlock facilitates the identification of transactions that harm the stability and reputation of the institution and banks from the viewpoint of money laundering. AMLock enables Banks and Financial Institutions to process transactions either in real-time or on offline basis, and checks for the abnormal behavior of a customer. It enables banks to identify those transactions that involve them in illegal transactions and harm their stability and reputation.

Role : SQL DEVELOPER

Responsibilities:

- Involved understanding project requirements and specifications.
- Writing Complex SQL queries using joins, Sub queries to retrieve data from the database.
- Worked on Unix shell scripting for uploading files into server by executing bash files.
- Involved in creation of tables, indexes, Views, Sequences as per design document.
- Development of database objects like Cursors, Triggers, Procedures and Functions etc.
- Developed, Modified, and optimized complex queries for data retrieval and modification.
- Understanding the issues which were raised by the clients and did a thorough analysis provide the fixes accordingly.
- Interacting with the team and lead to discuss about the issues.
- The issues will be clarified on or before given SLA breach timeline.
- Attend the Scope functional document discussion along with business analyst with client.
- Weekly basics attend client review call and share the status mail.
- If required we will provide a quick training about the application to the users.
- Product health check will be taken care in a scheduled manner.
- Following a proper documentation while releasing fixtures to the client.

- For any server level deployments to guide the respected team in the right way, we provide a detailed document with explanation how to do the same.
- We are taking the customer feedback for every half-yearly basics and work.

Project : Anti Fraud Controle. (AZENTIO Pvt Ltd)

Client : BOB (UK), ALBILAD CAPITAL (March 2023 – June 2024)

Description :

Anti-Fraud Compliance (AFC) Evaluate the current status and effectiveness of the organization's anti-fraud control environment - this involves assessing the culture, attitude, and awareness amongst employees about their knowledge of and response to any issues of fraud or mis conduct Enable continuous monitoring of controls using technology

Roles : SQL Developer

Responsibilities :-

- Perform data analytics of transactions periodically at the process level to alert Management of fraud.
- Created optimal technical solutions to user needs with in-depth system analysis.
- Analyzed existing SQL queries for optimization. Enhanced reports and introduced new system features.
- Performed data analytics of transactions for fraud detection. Maintained SQL queries, views, and stored procedures.
- Developed custom database objects and Supported project delivery and technical resolution.
- Preparing documents like Design document, Functional Specifications, Technical specifications .
- Debugging the exceptions from the logs, root cause analysis and providing the fix in logics.
- Perfomence improvements.

Project : Employee Transaction Database (VARIES TECHNOLOGIES PVT.LTD)

Client : WIPRO (APRIL 2022- FEB 2023)

Description :

This project creating tables, save data based on User requirements and, maintenance of existing reports (debugging data issues, change requests based on user observations) across multiple tracks (HR, HRSS, Finance, Sales, Time Management). The workflow starts with gathering requirements from Business User. Initiating backend development in development environment. share data for UAT and get sign-off from Business on report to move it to production environment. The object is deployed to Testing env. and then to production environment. Reports are enabled in front-end to User to download and use for their analysis.

Role : SQL DEVELOPER

Responsibilities:

- Involved in current production scenario and provide resolution within SLA.
- Developing SQL queries for extracting valid and invalid data from database as per client's requirements.
- Analysis of Customer requirement, Coding and Maintenance with the help of team group Personal - Individual Use.
- Performing Unit testing for the Code that we have created and preparing the Unit test cases and documenting them.
- Support for the development, test, and the production databases.
- Handling errors using Exception Handling extensively for the ease of debugging and displaying the error messages in the application.
- Domain Knowledge on HR/HRSS, Employee Profile Data, Attrition Data, Claims.
- Strong experience with trouble shooting data issues, debugging, and identifying bottlenecks in core logics.
- Work on complex SQL queries.
- Develop/modify all backend developments in Oracle, Hands on SQL scripting Knowledge, including stored procedures development.

SOFT SKILLS

1. **Constructive Criticism:** I provided feedback and suggestions for improvement on SQL queries, scripts, and database design. Collaborated with developers or users to

identify areas of improvement in SQL implementations. Offered constructive criticism to help enhance the overall performance and efficiency of SQL solutions.

2. Flexibility:

Adapted to changing priorities, requirements, and timelines in a dynamic environment. Handled multiple tasks simultaneously while maintaining attention to detail and quality. Quickly learned new technologies or tools related to SQL support as needed.

3. Interpersonal Skills:

Communicated effectively with users, stakeholders, and team members at all levels of the organization. Understand user requirements and translate them into technical solutions using clear language. Resolved conflicts or issues professionally by actively listening and finding mutually beneficial solutions.

4. Supervision:

Led a team of SQL support professionals by providing guidance, direction, and mentorship. Assigned tasks effectively based on individual strengths, skills, and workload capacity. Monitored the progress of team members' workloads while ensuring timely delivery of projects.

Hard Skills

1. Analysis of Data:

Analyzed database systems and data to identify patterns, trends, and insights. Performed data analysis using SQL queries to extract relevant information. Collaborated with business stakeholders to understand their data requirements.
- Developed reports and dashboards based on the analysis results.

2. Computer Engineering:

Have a strong understanding of computer engineering principles and concepts. Troubleshooted hardware or software issues that may impact SQL databases. Optimized SQL queries for improved performance by leveraging computer engineering knowledge.

3. Detecting and Correcting Errors:

Monitored SQL databases for errors, anomalies, or inconsistencies in data.

Investigated database issues, identified the root cause, and proposed solutions.

Performed data validation checks to ensure the accuracy and integrity of the database.

4. Group Work:

Collaborated with cross-functional teams such as developers, analysts, administrators, etc., to support SQL-related tasks.

Communicated effectively with team members to share knowledge, resolve issues efficiently, and drive projects forward.
