[Bold Profile](#)

Detail-oriented data engineer with expertise in designing, developing, and maintaining highly scalable, secure, and reliable data structures. Collaborates closely with system architects, software architects, and design analysts to understand business or industry requirements and create comprehensive data models. Proficient in developing effective database architectural strategies throughout the modeling, design, and implementation stages.

Professional Summary

- Interact with Source team understand feed structures, data volume, frequency
- Design, develop, test, implement and support of Data Warehousing ELT
- Worked on Bulk and Continuous data ingestion using COPY SnowPipe
- Created internal and external stage and transformed data during load
- Used core components i.e., types of Tables and cloning, time travelling, Streams, tasks
- Writing SnowSQL queries against snowflake
- Developing scripts to do Extract, Load, and Transform data
- Follow agile methodologies and work independently.
- Preparing SQL Queries to validate data in the target.
- Able to perform in data analysis by writing complex SQL.
- Good understanding of Data warehouse concepts and ETL process.
- Involved in various database testing activities such as data reconciliation, compare source and target database comparisons, finding difference in data in DWH tables.
- Hands on experience in writing SQL window / Analytical functions.
- Working knowledge in data management such as dataset preparations, cleaning un-wanted data, handling missing and outliers.
- Good knowledge in use of analytical functions like rank (), last (), first () in complex reporting.
- Particular knowledge use of Sets, date and aggregate functions.
- Involved in understanding Requirement analysis, LLD Preparation, preliminary PoCs rollouts and Unit test preparation/ execution.
- Hands on experience in database modeling, writing ER diagrams. Good understanding of business rules implementation using Primary/Foreign Key constraints.
- Running the workflow and job in informatic power center.
- Executing test cases by applying some test cases.

- Validating the data in staging area.
- Performed data validation to verify the data extraction and record counts in the database table.
- Writing test case and executing to validating populated data correctly into fact and dimensions.
- Reporting the daily testing issues.

Technical Skills

ETL development
Snowflake
Git
Gitlab
SnowSQL
GCP BigQuery
Data Pipeline Design
Data Modeling
Data Warehousing
Data Migration
SQL and Databases
SQL Programming
Data Analytics
ETL processes
Microsoft SQL Server
Python
Airflow
DBT
Jira
PowerBI
Microsoft Azure - Git

Work History

2024-03 - Current

Data Engineer

<https://diligentglobal.com>, Hyderabad, India (Remote)

- Optimized data processing by implementing efficient ETL pipelines and streamlining database design.
- Collaborated on ETL (Extract, Transform, Load) tasks, maintaining data integrity and verifying pipeline stability.
- Enhanced data quality by performing thorough cleaning, validation, and transformation tasks.

- Automated routine tasks using Python scripts, increasing team productivity and reducing manual errors.
- Collaborated with cross-functional teams for seamless integration of data sources into company's data ecosystem.
- Evaluated various tools, technologies, and best practices for potential adoption in company's data engineering processes.
- Gathered, defined and refined requirements, led project design and oversaw implementation.
- Reviewed project requests describing database user needs to estimate time and cost required to accomplish projects.
- Documented and communicated database schemas using accepted notations.
- Conducted extensive troubleshooting to identify root causes of issues and implement effective resolutions in timely manner.

2022-09 - 2023-12

Data Engineer

Tyson's Foods, Bengaluru, India

- Enhanced data quality by performing thorough cleaning, validation, and transformation tasks.
- Collaborated on ETL (Extract, Transform, Load) tasks, maintaining data integrity and verifying pipeline stability.
- Optimized data processing by implementing efficient ETL pipelines and streamlining database design.
- Migrated legacy systems to modern big-data technologies, improving performance and scalability while minimizing business disruption.
- Designed compliance frameworks for multi-site data warehousing efforts to verify conformity with state and federal data security guidelines.
- Generated detailed studies on potential third-party data handling solutions, verifying compliance with internal needs and stakeholder requirements.
- Collaborated on ETL (Extract, Transform, Load) tasks, maintaining data integrity and verifying pipeline stability using GCP.
- Analyzed complex data and identified anomalies, trends, and risks to provide useful insights to improve internal controls.
- Built databases and materialized views table structures for web applications.
- Prepared written summaries to accompany results and maintain documentation.
- Gathered, defined, and refined requirements, led project design, and oversaw implementation.
- Collaborated with cross-functional teams to understand business requirements and translated them into effective data solutions.
- Ensure that data governance practices align with industry standards, regulations, and organizational policies.
- Implement robust data governance processes and controls to guarantee data accuracy, completeness, consistency, and security.
- Delivered insightful operational reports through successful dataset manipulation, aiding business improvement actions.
- Worked closely with Business Analysts - SAP to build the reports in Power BI. Developed database architectural strategies at modeling, design, and implementation stages to address business or industry requirements.

2019-07 - 2022-09

Snowflake Data Engineer

Radiiustcard Solutions Pvt Ltd, Bengaluru, India

- Closely monitored data warehouse functionality and performance, proactively responding to issues.
Involved in migrating on-prem RDBMS into Snowflake EDW.
- Interact with business team and understand use cases.
- Interact with Source team to understand feed structures, data volume, and frequency.
- Design, develop, test, implement, and support data warehousing ELT.
- Worked on bulk and continuous data ingestion using COPY Snowpipe.
- Created internal and external stages and transformed data during load.
- Used core components, i.e., types of tables and cloning, time-traveling, streams, and tasks.
- Writing SnowSQL queries against Snowflake. Developing scripts to do extract, load, and transform data.
- Worked closely with other team members to identify and remove software bugs.
- Follow agile methodologies and work independently.

Education

2019-06

Bachelor of Technology: Electronics And Communications Engineering

GITAM UNIVERSITY - Bengaluru, India

Languages

Telugu	Bilingual or Proficient (C2)
English	Bilingual or Proficient (C2)
Kannada	Advanced (C1)
Tamil	Intermediate (B1)
