## Summary

---

DevOps Engineer with 1.9 years of experience in Azure cloud services and hands-on work in CI/CD pipelines. Skilled in Agile methodologies with continues improving automation and deployment processes.

## Experience

---

### Aggne Global IT Services, Software Engineer trainee

Hyderabad, IND  
Aug 2023 – Present

- Hands on experience in Azure DevOps services including Boards, customizations and permissions, Repo's, Pipelines and Artifact management
- Octopus deploy configuration for continuous deployment with tentacle installation in target environments, external feeds, project setups, tasks and variable management
- Azure cloud computing for Windows IIS based applications and integration of MSSQL server for two node architecture
- Monitoring of virtual machine using Azure Monitor, Insights and Log Analytic work space with comprehensive alert mechanism
- Understanding of Git VCS, complex branching strategies and environment life cycle for production release
- Automations using power shell scripting ensuring minimal human interaction

### Accolite Digital, Software Engineer Intern

Hyderabad, IND  
Feb 2023 – Jun 2023

- Gained hands-on experience with Java Maven-based applications, with understanding of Object-Oriented Programming, multithreading concepts, and JUnit testing.
- Developed RESTful APIs using Spring Boot to interact with SQL databases.
- Built single-page applications with Angular and deployed static websites on Azure Storage account.

## Projects

---

### California FAIR Plan Association

Nov 2023 - Present

- Managed release planning and ensured timely production releases for smooth deployment
- Configured CI/CD pipeline using Azure DevOps services, integrated with Octopus Deploy for efficient deployment processes for Policy, Billing, Claims, Party modules as per DuckCreek on demand standards
- Developed reusable YAML scripts for deploying middleware containers, ensuring smooth transitions throughout the environment lifecycle from Azure DevOps to AWS
- Implemented effective branching strategies for complex parallel development, hot-fix deployments, and version upgrade from 8.0.1 to 8.0.4.X

### Safepoint Insurance

Sep 2023 - Aug 2024

- Provisioned virtual machines, configured IIS, MS-SQL servers. Performed timely patching and maintenance activities to ensure well-being of production servers.
- Implemented regular backups of Azure Virtual Machines to RSV and production databases to storage accounts, ensuring up-to-date database backups. Configured alerts for database backup failures, as well as virtual machine disk size, mem-

ory, and CPU utilization, enabling manual intervention when necessary

- Achieved automation of code deployment to target environments through Azure DevOps pipelines and release processes with Azure repo VCS, powershell scripting for complex problems
- Successfully deployed third-party portal using an S3 bucket and CloudFront, with backend APIs implemented via Lambda functions network setup for seamless communication.
- Prepared documentation and presentations to demonstrate solutions to the client, outlining new branching strategies and the deployment lifecycle for the upcoming cycle, especially in Hotfix deployments.

## Skills

---

**Cloud services:** Azure IAAS, Storage account, SQL Server, Azure monitor, Azure kubernetes services(AKS), Function Apps and API management, Terraform

**DevOps Tools:** Azure DevOps services, Octopus Deploy

**Programming Languages:** C programming, Python, Java, Spring-Boot, PowerShell, SQL

**VCS:** Git, Git-Hub, Azure Repo, code commit

## Education

---

**Institute of Aeronautical engineering,** Electrical and Electronics engineering

May 2019 – Sept 2023

- GPA: 7.4/10
