WORK EXPERIENCE

Data Analyst-PVH Corp. (Bangalore)

(October 2022-Present)

- Performed regular as well as ad-hoc analysis and Microstrategy and Tableau dashboard reporting for PVH Supply Leadership to enable decision making.
- Used Python, Selenium, Excel and Openpyxl to automate periodic data extraction, web scraping, data cleaning and data transformation processes, which led to a 70% reduction in time for data collection and report generation.
- Periodic data pulls from SAP ERP System and uploading to Oracle database.
- Created Python scripts to automate data quality checking processes, therefore drastically reducing manual effort required.
- Created Excel VBA Macros to reduce data refresh time by about 99%.
- Collaborated in an agile environment using tools like Confluence and Jira.
- Gained exposure to Azure Data Factory and working in DataBricks environment.

Data Analyst-Clootrack (Bangalore)

(May 2021-October 2022)

- Used Python, Excel and Google sheets to perform webscraping, data cleaning, data preparation, labelling and transformation on various customer review data.
- Performed data analysis to draw actionable insights from customer experience data.
- Performed extensive online research to gather clients customer experience data from various sources. Gained experience working on text data.
- Built an internal tool that helped automate the data quality check process, therefore drastically reducing manual effort required.
- Gained exposure with working in GCP environment(working with storage buckets as well as running scripts in compute engine).
- Collaborated with core engineering team and business teams, worked in scrum environment.

Data Science Technical Writer and Platform Moderator-Cluzters.ai (Hyderabad)

(November 2020-May 2021)

- Built banking and finance data science models such as loan default prediction model, bank customer churn prediction model, stock portfolio optimization model, for deployment on Cluzters.ai platform.
- Was in charge of data science content curation and creation for Banking and Finance Domain.
- Promoted Cluzters.ai content on LinkedIn, Facebook and Telegram, grew LinkedIn content group from 15 members to 360+ members.

PROJECTS

Automated Intraday Stock Trading System using Zerodha KiteConnect API and Python(Currently under progress)

- The trading system will run by getting live price data and placing orders using Zerodha's KiteConnect API.
- Multiple strategies have been backtested using AlphaVantage API and Zerodha's KiteConnect API.
- The automated trading system will run on the cloud using AWS EC2.
- Gained exposure on working with AWS EC2 function.

Stock Portfolio Efficient Frontier Optimization with Python

- Learned fundamentals of Modern Portfolio Theory and usage of Quandl API.
- Tested Portfolio Optimization Techniques on both US stock data and Indian NSE stock data.
- Obtained portfolio weights for a given basket of stocks for both minimum volatility(minimum risk) portfolio, as well as maximum sharpe ratio(best risk-adjusted return) portfolio. Used numpy, pandas and scipy for optimization.
- Visualized Efficient Frontier using Matplotlib.

Bank Customer Transaction Prediction using Machine Learning Techniques in Python

- Obtained Dataset from Kaggle.
- Performed Exploratory Data Analysis, Cleaned and Transformed the Data.
- Used machine learning models such as logistic regression, random forest, LGBM with SMOTE in order to maximize AUC score.

Loan Default Prediction Using Machine Learning

- Performed Exploratory Data Analysis, Cleaned and Transformed the Data.
- Tried different machine learning models such as logistic regression, decision tree and random forest.
- Optimized hyperparameters to get best prediction accuracy.

EDUCATION

B.Tech(Electronics and Communication)

Vellore Institute of Technology

📅 September 2019

📍 Vellore, India
