SUMMARY

Dynamic DevOps Engineer with proven expertise in cloud infrastructure and automation, specializing in transforming monolithic architectures into scalable microservices. Demonstrated ability to optimize CI/CD pipelines, manage cloud infrastructure, and drive operational efficiency across AWS and GCP environments.

WORK EXPERIENCE

42 GEARSMOBILITY SYSTEMS

Senior Cloud Engineer | Dec 2022 - Present

- Transitioned **monolithic app** to **microservices architecture**, enhancing scalability and deployment flexibility.
- Built and Maintained **AWS/GCP** infrastructure major services like **Instances, buckets/Bigquery, load balancers, VPC's, Mongo Cluster, Kubernetes clusters**.
- Developed and optimized **GitLab CI/CD** pipeline for 20+ microservices.
- **Pipeline Stages: SonarQube** checks, **Docker builds**, Automated **Deployments, Kafka/Pub/Sub** management.
- Managed **Secrets, ConfigMaps**, and environment-specific deployments.
- Automated **integration & Regression** testing with results delivered via **webhooks** for real-time updates.
- Optimized Docker builds using **multi-stage** techniques, reducing build times/size and improving consistency.
- Developed a strategy to simplify managing multiple service tags by using a single **Docker image** for both frontend and backend services. Dynamically configured **content roots** and **Environment** variables to initialize required services from a unified image.
- Implemented **Prometheus, Loki**, and **Grafana** using **Helm charts** for real-time monitoring and log aggregation.
- Configured Prometheus to **Scrape job** metrics for Kubernetes resources, including internal **service URLs, SQL Express databases, Kafka monitoring**, and **EC2 instances**, ensuring proactive **Monitoring** and **Alerting**.
- Set up **Grafana dashboards** with custom panels to visualize critical performance metrics and configured alerts through **SMTP**.
- Worked closely with Developers on **POCs**, including **Custom Operators & CRDs**, Open Source Resource Deployment (e.g., **Key cloak, Prometheus, Loki, Grafana, Redis/postgresql**), **Static Bucket Provisioning** to **Kubernetes pods**, **AWS Cluster Upgrades**, On-Premise Infrastructure Transition, Custom **Scripting**, and Regular tasks/**debugging**.
- **Optimized single-tier server** setup for rapid developer testing: Created a golden snapshot of an Ubuntu server for **Dynamic test environments** with DNS provisioning. Enabled seamless updates by integrating image tags and configurations, allowing compiled code changes to auto-restart pods with updated features. Leveraged **K3s, MongoDB, SQL, NGINX**, and **Kafka** for efficient deployment in cloud stack environments

Exel Rubber Private Limited - July - Nov 2022

Junior Engineer

- Leveraged problem-solving and attention to detail skills to Analyze and resolve complex mechanical engineering issues
- Managed and executed scheduled maintenance plans for equipment and production processes
- Collaborated effectively with cross-functional teams to ensure efficient production planning and execution
- Successfully achieved **AWS certification** to validate the transition from a mechanical engineering role to a DevOps position, highlighting adaptability and rapid skill acquisition in emerging technologies and methodologies.

SKILLS

- AWS/GCP
- Docker
- Nginx
- CI/CD (GitLab and Jenkins)
- Loki, Prometheus, Grafana
- Linux
- Automation
- Basic Python Scripting
- Ansible
- Terraform
- Mongo/SQL & BigQuery
- Kubernetes

CERTIFICATIONS

Amazon Solutions Architect - Associate

Certificate ID: 6TG7HHR1SJF413G9
