Sandeep B

AI Engineer

SUMMARY

I bring over two years of solid experience in Java development and a keen interest in exploring the realms of Artificial Intelligence (AI) and Machine Learning (ML). With a proven track record of adapting to new technologies, I am now eager to transition into roles where I can apply my skills to AI and ML projects. My journey into AI and ML has been driven by a genuine curiosity and a desire to stay at the forefront of technological innovation. Outside of work, I have been diving deep into AI and ML concepts, expanding my knowledge and skill set, designing and optimizing backend systems for AI-driven applications, integrating and fine-tuning large language models (LLMs), and building APIs for seamless AI interactions.

KEY SKILLS

Software/Computer Engineering :

- Client Satisfaction, Change Management, Documentation and Status/Data Report Graph Generation • SQL • Python Programming Language
- MS Office Suite • Version flow control systems like GIT. • Familiarity with AWS Services like EC2 , S3 Buckets, Lambda etc.
- AI applications like ChatGPT, Gemini, Copilot, Claude, LLAMA. • Familiarity with Microservice architecture. • NodeJS (Learning)

Data Science :

- Probability and Statistics • Simple and Advanced Regression and Classification Model building, Selection, Evaluation and Optimization
- Data Visualization • Data Manipulation/Wrangling and Pre-processing. Tools - NumPy, Pandas, scikit-learn Matplotlib, Seaborn, Plotly
- Deep Learning(DL) Neural Networks CNNs, RNNs, Image and Object Recognition. Frameworks - TensorFlow, Keras, PyTorch, OpenCV.
- Machine Learning Techniques like Random Forest • Natural Language Processing(NLP) Techniques - Lexical, Syntactic and Semantic Processing
- Generative AIs, Prompt Engineering Techniques like ReAct, Zero Shot, One Shot, etc. OpenAI APIs such as Chat Completions, Moderation.
- Designing and Fine Tuning Large Language Model(LLM) Based systems and models, Transformer based systems like GPT, BERT etc.
- Building Specific AI systems using existing LLM technologies such as OpenAI's GPT models, Gemini models by Google, LLama models by Meta
- Retrieval Augmented Generation(RAG), Vector Databases, Chroma DB, Pinecone, Semantic Search, Data Embeddings, Data Caching, QA Chatbots, Data/Documents Ingestion. Worked on Frameworks like Llama-Index, LangChain, LangGraph etc.
- Backend Development using LLMs • AI System feedback using Reinforcement Learning through Human Feedback

Soft/People Skills :

- Verbal Communication • Teamwork • Problem Solving • Continuous Learning
- Excellent understanding of English Language • Adaptability • Creativity

PROFESSIONAL EXPERIENCE

Associate Consultant

Mar '21 - Jan '24

Wipro Ltd

Bengaluru, IN

Java Developer

- Enhanced customer satisfaction by implementing **customer-centric approaches** in coding & debugging Java for an average of 4 hours daily.
- Managed documentation, data maintenance, & report generation resulting in a **40% decrease in incident/issue creation**, while also boosting customer revenue through daily reports
- Planning for Backup and Disaster recovery along with **Change Management** for streamlined code changes which streamlined code changes and decreased customer unhappiness.

Data Analyst/Analysis

- Performing **Data Extraction** from 10+ source systems from multiple ends and getting it ready for cleaning which increases **decision-making time**.
- Automated data processing with SQL & Python to reduce processing time by **20%**, creating **pie graphs** & interactive **dashboards** for client insight.
- Utilized Excel, SQL, Python to analyze sales data & customer behavior, resulting in **strategic product offerings & operational changes** for clients.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering

Aug '16 - Jul '20

Don Bosco Institute of Technology and VTU

Bengaluru, IN

PROJECTS

1. Trip/Travel Advisor built using OpenAI

Jul '24

 - This project is a Travel chatbot that provides users with travel information and recommendations. The chatbot includes a static introductory message, a typing effect for responses, and detailed error handling in the JavaScript code.
 - The Backend side of the project is hosted on AWS Lambda while the Frontend(HTML, CSS, JS) side of the project is hosted on Github and the interface is hosted on Github Pages and is available to interact at https://sandeepgitguy.github.io/Chatbot_interface/
2. Insurance Documents QA Chatbot using LlamaIndex

Oct '24

 - The Insurance Documents RAG QA Chatbot is a smart solution for answering queries related to insurance documents.
 - It simplifies the interpretation of dense and complex policies by integrating retrieval and generation techniques to provide accurate and contextual answers in real time.
 - Github Link - https://github.com/SandeepGitGuy/Insurance_Documents_QA_Chatbot_RAG_LlamaIndex
3. Insurance Documents QA Chatbot using LlamaIndex and LangChain

Dec '24

 - The Insurance Documents QA RAG Chatbot is an advanced conversational assistant designed to streamline complex queries on insurance documents while also providing general information by conducting internet searches.
 - Utilizing Retrieval-Augmented Generation (RAG) pipelines, the chatbot intelligently determines whether to retrieve information from a document or the web, ensuring accurate and contextually relevant responses.
 - Github Link - https://github.com/SandeepGitGuy/Insurance_Documents_QA_Chatbot_RAG_LlamaIndex_LangChain
4. Insurance Documents QA Chatbot using LlamaIndex and LangGraph

Nov '24

 - This chatbot leverages the advanced capabilities of LangGraph to deliver precise and context-aware responses.
 - It dynamically retrieves data from insurance documents or conducts web searches based on user queries, enabling a seamless and intelligent interaction.
 - LangGraph's graph-based orchestration and stateful design ensure optimal performance for multi-agent workflows.
 - Github Link - https://github.com/SandeepGitGuy/Insurance_Documents_QA_Chatbot_RAG_LlamaIndex_LangGraph
5. Laptop Recommendation Chatbot using RAG and LlamaIndex.

Sep '24

 - The Laptop Recommendation Assistant with Full RAG leverages a dynamic dataset of 900+ laptops stored in a .csv file, updated weekly to ensure recommendations are always accurate and up-to-date.
 - By combining real-time retrieval from the dataset with the contextual understanding of GPT models, the chatbot delivers precise, data-driven, and personalized laptop recommendations tailored to user preferences.
 - Github Link - https://github.com/SandeepGitGuy/Laptop_Recommendation_Chatbot_RAG

and many more projects. For Full details visit my Github <https://github.com/SandeepGitGuy/>
