Objective

To find a position that is challenging, rewarding and provides an opportunity to expand my knowledge and abilities in creating client centric solutions.

Professional Summary

- 20+ years of experience in software development.
- Expertise In **ReactJs, NodeJs, NextJs, PHP Laravel**
- Created real-time web applications, complex front-end and back-end management systems including content management, media and network tools automation.
- The projects based on ReactJs,NodeJs, PHP in conjunction with various other web development technologies.
- Web site development with security access
- Expertise in creating APIs using RESTful web service and Laravel framework.
- Involved in Database design and optimization.
- Roles and Responsibilities in current project
 - Analyzing, designing and construction of the system.
 - Estimate the effort required for project development and share the same with the client.
 - Coordinate with clients on communications related to the project or otherwise.
 - Leading team of 6 developers.

Software Proficiency

- Databases: MySQL, MongoDB
- Web Technologies: **ReactJs**, NodeJs, HTML, CSS, JavaScript, JQuery
- Web Servers: Nginx, Apache.
- PHP Frameworks: **Laravel**
- Operating Systems: Windows, Linux, MacOS
- Others : XML, Git

Education

- **M.C.A** from *Vidya Vikas Institute of Technology, Mysore* (Affiliated to Visveswaraiah Technological University, Karnataka) with First class with distinction of **72%**

Work Experience

- Working as Tech Lead at Aeries Technologies Bangalore from June 2022 to till date
- Worked as Tech Lead at Compassites Inc Bangalore from Aug 2016 to May 2022
- Worked as Module Lead at Mphasis from Dec 2006 to 2016 August
- Worked as Software Engineer at Tavant Technologies Pvt. LTD., (<http://tavant.com>) Bangalore, India from April 2006 to Dec 2006.
- Worked as Software Engineer at Ninestar Information technologies Ltd., (<http://ninstar.co.in>) Bangalore, India from Feb 2005 to April 2006.
- Worked as Software Engineer at LxLabs, (<http://lxlabs.com>) Bangalore, India from July 2003 to Jan 2005.

Project Experience Highlights

➤ SharpSpring

Description: At Aeries Technologies Bangalore, I played a pivotal role as the Team Lead for the SharpSpring project. SharpSpring is a comprehensive marketing automation software that features behavior-based email marketing, and tools to create custom forms, landing pages, and blogs, along with full compatibility with multiple external applications and CMS. I spearheaded a team of 6, focusing on the Email and Landing Page modules. Utilizing my substantial experience in Web Development, specifically with ReactJs, NodeJs, and PHP Laravel, I was instrumental in enhancing the software. I also worked extensively with MySQL and MongoDB databases. In addition to development tasks, I was responsible for integrating the software with third-party CRM systems, facilitating workflows, and automating email functions. My problem-solving skills were put to use in deciphering reverse IP lookup tools to identify anonymous visitors. With my strong communication skills, I led the team effectively, ensuring a seamless workflow and successful project completion.

Operating system : Ubuntu

Technology : ReactJs, NodeJs, PHP Laravel

Databases : MySQL, MongoDB

Team Size : 12

Roles and Responsibilities: Worked for Email and Landing Page modules. Team lead CoE members

➤ Count On Cloud

Description: Count On Cloud is an accounting software developed to help sellers

on e-commerce with their accounting related operations. This will minimize manual and operational effort from Sellers.

Tax Count On Cloud will provide a way for sellers to convert their Amazon Monthly Report into Tally-readable XML files. Seller can import these files into Tally and seamlessly import all the Sales and credit notes vouchers. Sales, Returns/refunds data can be imported into Tally via MTR.

Operating system : Ubuntu

Technology : ReactJs, NodeJs, PHP, Laravel 5.6

Databases : MySQL, MongoDB

Team Size : 6

Roles and Responsibilities: Worked as Lead and developed Background process for Amazon MWS APIs

➤ **MSF Partner Dashboard**

Description: Multi Seller Flex is the business model where several smaller sellers work with an operator to get their products fulfilled using Amazon WMS solution. Multi Seller Flex (MSF) site are fulfillment centers owned and operated by third party providers wherein sellers located near MSFs can send their products to the sites and make them available for customers. MSF operators take care of processing customer orders and any returns for seller's products.

This tool will get all reports (inventory, pick pack, returns) from Amazon's S3 bucket and process the data and calculates various fees + tax involved. Partner can login to tool and generate invoice for all sellers and send them through email. This will avoid manual calculations of fees and manual generation of invoices from partners. This will also reduces conflicts between partners and sellers on invoice amount where Amazon has to resolve conflicts by manually interfering .

Operating system : Ubuntu

Technology : PHP, Laravel 5.6

Databases : MySQL, MongoDB

Team Size : 3

Roles and Responsibilities: Worked as Lead and developed SAPI registration process for Amazon SP APIs

➤ **Artemis**

Description: Artemis provides the wide variety of services to privileged people to plan and execute their dream to travel. It helps right from searching destinations until the end of the journey. This application divided into several modules like Lead-automation, Travelbuilder, Travelmaker, Masterdata, Reservation, Reports, TPI.

Once the user gives his details and interests in various kind of forms on the website or over the call or through the email, a lead will be created using Lead-automation tool. This lead will be processed and assigned to travel consultant based on users intrests and options he has chosen while filling the forms. The travel consultant will take forward that lead and help the user to plan and execute his travel plan using various tool available on Artemis.

The user doesn't need to worry about anything on his journey plan, all services will be provided to him using Artemis application like Reservation module which will take care reserving hotels and other services, TPI will help to book hotels directly.

Operating system : Linux

Technology : PHP, Laravel

Databases : MySQL

Team Size : 30

Roles and Responsibilities: Worked as Lead in the Lead-automation tool and Also worked as Main contributor in Travelbuilder and TravelMaker

➤ **SI2-Automation Controller**

Description: Automation Controller used as a micro-automation action management utility enabling automation actions abstraction for endpoint network devices via HPNA and services from other tools via APIs. The SI2 Automation Controller generates dynamic APIs for automation actions. It also facilitates and manages API publications to the SI2 API Gateway. This utility provides basic

automation building blocks for common and time consuming tasks handled manually in the current environment.

Operating system : Linux
Technology : PHP5, Javascript, JQuery, AJAX, Zend Framework
Databases : Vertica DB, MySQL
Team Size : 8

Roles and Responsibilities:

- Involved in Analyzing, designing and construction of the system.
- Estimate the effort required for project development and share the same with the client.
- Coordinate with clients on communications related to the project.
- Involved in database design and maintenance.
- Implemented master and slave database replication model.
- Checking the required libraries and system configurations (PHP, apache)
- Deploying product to production servers.
- Managing SVN
- Leading and guiding team of 6 developers.

➤ **SI2-IPAM**

Description: SI2-IPAM (Internet Protocol Address Management) provides a network interface that allows user to write fully featured registration applications through their SSI Account. SSI provides Application Programming Interface (API), GUI and Restful web services for each network functionalities like Set to Manual DHCP, Set to Dynamic DHCP, Get from pool and Return to pool etc.

Technology : PHP, Javascript, JQuery, AJAX, Zend framework
Databases : Sybase, MySQL
Team Size : 14

Roles and Responsibilities:

- Involved in Analyzing, designing and construction of the system.
- Estimate the effort required for project development and share the same with the client.
- Coordinate with clients on communications related to the project.
- Involved in database design and maintenance.
- Deploying product to various servers.
- Data migration from Old IP management system to SI2-IPAM.

➤ **EmailBuilder**

Description: EmailBuilder enables users to create and send rich-media marketing emails quickly and easily. Based on definable HTML templates and containing specific messages and images chosen by the user, sales messages are distributed to a virtually unlimited number of recipients, all in a timely and cost-effective manner. All web pages are tested for cross browser Compatibility (tested for IE6, IE7, IE8 and Firefox). Ajax technology is used to get better performance. All client side technologies are well tested with cross browsers Compatibility. This application has unique way getting input from end user in all forms of application using JavaScript popup which is very easy for user to enter input data and validations are done through Ajax and javascript. Server side validations of form data is done through Ajax and javascript to reduce the response time.

Technology : PHP, Ajax, JQuery, Javascript
Databases : MySQL
Team Size : 4

Role : Senior Developer

➤ **ImageFinder**

Description: ImageFinder is the ultimate online storage facility for all the logos, illustrations, and photos, used in corporate web sites, enables user to quickly and easily locate specific images. Advanced technologies like Ajax, JQuery are used in this application to give easy usability and good interface to end user. All web pages are well tested for performance and cross browser compatibility. Following are the important features of the ImageFinder.

1. Completely customizable user interface
2. Password controlled access lets user determine who has access to what image and determines
3. Images are displayed as thumbnails for easy browsing
4. Images can be made available in multiple file formats
5. Bulk upload option
6. Access levels based on login
7. User can edit the image (Crop, change format, change color mode[RGB, CMYK, GRAY SCALE])

Technology : PHP, ExtJS, AJAX, JQuery, Javascript, Zend Framework

Databases : MySQL

Team Size : 6

Role : Senior Developer

➤ **Media Builder**

Description: Media Builder is software that used to create Ads online. Once user creates Ad he can order for print or he can download the PDF. User can save his preferences which can be reused.

Technology : PHP, JQuery, DOJO, Javascript, CSS, HTML

Databases : MySQL

Team Size : 6

Role : Senior Developer
