PROJECTS

Food Ordering Website

📅 08/2023 📍 bilad,gujarat

"Our food ordering website provides a seamless and convenient experience for users to browse a variety of delectable dishes, add them to their cart, and easily complete the transaction through a secure payment system. With user-friendly login and signup options, customers can track their orders and enjoy a personalized experience. For administrators, our robust admin panel offers efficient management of products, orders, and user accounts, ensuring a smooth operation of the platform. Elevate your food delivery business with our user-centric design and powerful features."

CRUD Operation

📅 11/2023 📍 umergaon

Designed and implemented a dynamic and responsive live website featuring CRUD (Create Read Update Delete) operations. Utilized front-end technologies such as HTML, CSS, and JavaScript to create an intuitive user interface, while employing back-end technologies such as PHP MySQL to manage and manipulate data seamlessly. The website showcases my proficiency in full-stack development, highlighting my ability to create user-friendly interfaces and robust back-end functionalities.
