

Sayali Dane

Data Scientist | AI/ML Developer

Bangalore,IN | 9049017380 | sayli.dane@gmail.com

SUMMARY

Data Scientist and Machine Learning/AI Developer with experience working on diverse projects involving machine learning, computer vision for applications like facial recognition, gesture recognition and image processing. Highly motivated and passionate about state-of-art technologies, seeking challenging role in machine learning.

EXPERIENCE

Zyngate Pvt Ltd

ML/AI Developer 07/2024 to 09/2024

- Worked on an AI based automated job processing application that fetches jobs based on user preferences and automatically applies on behalf of the user.
- Leveraged technologies like python, machine learning, mongodb, openAI , AWS to streamline the job search and application process.

Adiya Business Solutions Pvt Ltd

AI Developer 10/2023 to 3/2024

- Spearheaded a facial recognition project utilizing the MTCNN library to detect faces in input images.
- Developed algorithms to retrieve images of the identified person from a dataset, supporting facial recognition and tracking.
- Gained experience in image processing and Agile methodology.

Aarmon Tech Pvt Ltd

Machine Learning Developer 01/2023 to 09/2023

- Developed an AI-powered chatbot to customer support automation, leveraging natural language processing(NLP).
- Designed and implemented a speech recognition system with high accuracy for converting spoken language into text.
- Technologies Used: Python, TensorFlow, Keras, Natural Language Processing (NLP), Deep Learning.

Khet-E Management Pvt Ltd

Data Scientist 02/2022 to 1/2023

- Worked on a diverse projects requiring expertise in machine learning, deep learning, neural network and data analysis.

KEY SKILLS

- Machine Learning
- Python
- Deep learning
- Data Visualization
- AI
- Computer vision
- Neural network
- SQL
- R
- Predictive& statistical modeling
- Azure
- Chatbot

TECHNICAL SKILLS

Modelling

Techniques/Algorithms:

Linear regression, Logistic regression, Clustering, Classification, Decision Tree, Random Forest, Time series forecasting, Object classification, Gesture recognition.

Python Libraries:

Numpy, Pandas, Scipy, Tensorflow, Pytorch, SKlearn, OpenCV, keras.

Tools:

Tableau, MongoDB, AWS, PowerBI, MS Excel, VBA.

- Developed algorithms for outcome prediction using machine learning techniques in Python.
- The primary task was to develop a robust algorithm for prediction, incorporating deep learning and neural network methodologies.
- Conducted research on NLP models for sentiment analysis of feedback/comments in multiple languages.
- Performed Exploratory Data Analysis (EDA) to derive insights from the data, showcasing skills in data analysis, reporting, and manipulation. Data cleaning and complex data management were integral aspects of my role, ensuring the integrity and quality of the datasets.

ADDITIONAL PROJECTS

- Project of Time Series with and without including exogenous factor using ARIMA and SARIMAX to get the better results of forecasting.
- Project of model building for text analysis in NLP for sentiment analysis.
- Project of deep learning to detect the face mask, by training the model with pictures with mask and without mask.

EDUCATION

2020

B.E. Electronics/

Telecommunications

MGM JNEC Aurangabad

CGPA- 7.29

2017

**Diploma Electronics/
Telecommunications**

Government Polytechnic
Aurangabad

Percentage- 72.53

CERTIFICATIONS:

1. Post-Graduation Certification in Data Analytics
2. Azure Administrator Certification
