SKILLS

Programming Languages: C#, Python

Database Technologies: SQL, Entity Framework

Web Technologies: .NET Core, Web API

DevOps Tools: Azure DevOps, Git

Front-End Technologies: HTML, CSS, JavaScript, jQuery, Kendo UI for jQuery

Frameworks and Libraries: ASP.NET, jQuery

WORK EXPERIENCE

Novigo Solutions, Mangalore

Software Engineer

May 2023 – Present

- Designed and implemented RESTful APIs for seamless integration with front-end applications, enhancing user experience and functionality.
- Developed and maintained web applications using .NET Core, Web API, and Entity Framework, ensuring robust and scalable solutions.
- Collaborated with cross-functional teams to gather and analyze requirements, design technical solutions, and ensure successful project delivery.
- Implemented and maintained CI/CD pipelines using Azure DevOps to streamline the development, testing, and deployment processes.
- Documented technical specifications, development processes, and user guides to ensure clear communication and knowledge sharing within the team.
- Worked with SQL Server and Git for version control and database operations.
- Used Kendo UI for jQuery to build interactive front-end components.

EDUCATION

NMAM Institute of Technology, Nitte Aug 2019 - May 2023

Bachelor of Engineering

CGPA: 8.1/10

PROJECT WORK

ETMS:

Summary: This project is an Employee and Vehicle Tracking System that efficiently manages employee shifts and tracks vehicle operations in real time. It enhances decision-making through streamlined scheduling, monitoring, and reporting features.

Technologies: .NET Core, Microservices

Role Performed: Backend Developer

Responsibilities:

- Actively participated in the complete Software Development Life Cycle (SDLC), from requirement gathering to deployment and maintenance.
- Implemented and integrated new microservice into the architecture.
- Developed new features and enhancements as per client needs.
- Collaborated with the team to understand product requirements and design scalable solutions.

Nyletech IOT:

Summary: An IoT-based project designed to fetch GPS data and track vehicle movement.

Technologies: .NET Core, Python

Role Performed: Backend Developer

Responsibilities:

- Created data pipelines to store and visualize GPS data.
- Integrated Python services with .NET Core backend.

Glovia:

Summary: Worked on modernizing legacy frontend components by migrating from AngularJS to jQuery and creating reusable Angular libraries.

Technologies: Angular, AngularJS, jQuery, JavaScript

Role Performed: Frontend Developer

Responsibilities:

- Migrated legacy components from AngularJS to jQuery to align with project requirements.
- Created Angular library projects to modularize and reuse components across the application.
- Focused solely on UI migration and modularization.
