Summary

I am an RPA Developer with over 3.5 years of experience specializing in **UiPath**. I have hands-on experience with Jira. I am familiar with **SDLC**, Waterfall, and Agile development methodologies and adept at designing workflows using Re-frameworks, sequences, flowcharts, and state machines. Proficient in using **ReFramework** and familiar with the latest RPA technologies and AI integration, my expertise includes common automations for **Excel, databases, RESTful APIs, and Citrix**. Worked on **Queue Configurations**, My skills extend to automating PDF documents, managing queues, bots, and processes using **Orchestrator**. I am proficient in creating business process workflow diagrams and procedural documentation. I possess excellent teamwork, communication, and learning abilities, and I am always ready to face new challenges and take on extra responsibilities to get work done. I excel at working under pressure, meeting deadlines, and quickly integrating into team environments.

Work Experience

RPA DEVELOPER at Vyom Labs

July 2021 - Present

PROJECT EXPOSURE

Project - 1

Project Name: WPA Claim

Domain: Health Care

Role: RPA Developer

Roles and Responsibilities:

- Developed business process flow as per requirements. Project phase included RPA features like queue and exception handling concepts.
- Understood logical flow of application from business knowledge, developed application logic, and ran flow of application.
- Involved in the unit testing process in development environment and in full Software Development Life Cycle (SDLC). Deployed setup files on client environment, provided support, and fixed bugs. Provided estimations for development and testing of process.

Project - 2

Project Name : IDC

Domain : Finance Domain

Technology : RPA Developer

Roles and Responsibilities:

- Developed a RPA bot to automate and download attachments from emails, then sent them to identifiable list of users, increasing the processing speed. Assist and support implementation team members. Understanding Logical flow of the Application from Business Knowledge.
- Using queues concept developed the Process in such a way that Process can multiple applications parallelly using multiple queues. Deploying set up files on client environment, support and bug fixing. Provided the estimation for Development and testing of process.

Project - 3

Project Name: Vessel Invoice Generation

Role: RPA Developer

Roles and Responsibilities:

- Designed and developed Integrated the solution with multiple systems, deployed bots in the production environment, and conducted testing to ensure reliability. Collaborated with business stakeholders to understand requirements, provided post-deployment support, and resolved issues promptly.
- Optimized bot performance by analyzing metrics, implementing improvements, and ensuring compliance with organizational security policies and data privacy regulations. Documented processes and provided training to ensure seamless operation and maintenance.

Technical Skills

- UiPath • Blueprism • SQL • Java
- API • Python • Jira • TFS • GIT .

Education

Pune University

Master of Computer Application – MCA 2018-2021

Amravati University

Bachelors in Computer Application– BCA 2015-2018

Certifications:

UiPath Advance Certified
