

DevOps Engineer

Email: vsirisha2404@gmail.com

Mobile:- +91-7036301286

OBJECTIVE

Around 3 years of IT experience as a DevOps Engineer, Effectively participate in automating the deployment process of all the applications from DEV to PROD as well as infrastructure, be an effective team player in developing, managing projects and to be an asset for organization by delivering to the best of my capabilities. My goal is to devise better problem- solving methods for challenging tasks and to continuously learn new technologies and tools to stay updated with the latest trends and industry standards.

PROFILE SUMMARY

- Having nearly 3 years of IT experience as a Implementing DevOps Culture and process in a delivering and maintaining the software applications.
- Having experience in Complete Build and Release for all the Environments like UAT, QA, DEV and Production.
- In-depth understanding of the principles and best practices of Software Configuration Management (**SCM**) processes, which include compiling, packaging, deploying and application configurations.
- Good Working Knowledge on Cloud platform and has implemented several services in the project like **Azure VM, Azure SQL Database, Azure Blob Storage, Azure Load Balancer Azure Virtual Network, Azure Kubernetes Service (AKS), Azure Monitor Azure Container Registry (ACR), Azure Log Analytics** etc.
- Great Exposes and Good Knowledge on **Linux Platform**.
- Implemented several onetime automation scripts using **Shell Scripting**.
- Extensively worked with Implementing **GIT** and branching strategy for achieving CI/CD.
- Good working Knowledge on **MAVEN** Integrated unit-test cases in Pipeline Execution.
- Experience in integrating **SonarQube** with pom.xml file for Code Quality Analysis and generating the Code Quality Code.
- Experience in Networking, Compute, Storage, Monitoring, Security
- Good Working Knowledge on achieving cloud infrastructure automation using **Terraform**.
- Worked on implementing **Terraform** modules and remote state management with s3 bucket.
- Experience in implementing **Jenkins** CI/CD in process for Java, .Net projects.
- Implementing Software Configuration Management in setting up the Infra for application deployment using **Ansible-Playbook**.
- Experience in using **Nexus** Repository Manager for Pulling /Pushing the Docker Images. □
Good Experience in creating **Docker File**.
- Good Experience in maintaining and writing manifest file in **Kubernetes** like Pod, Deployment, Replicas set, Cluster IP, Demon set & Ingress etc.
- Experience in implementing and supporting microservices projects using **Azure Kubernetes Service (AKS)** with integration through **Docker containerization**.
- Ability to work closely with teams, to ensure high quality and timely delivery of builds and releases.
- Strong ability to troubleshoot any issues generated while building, deploying in production support.

ACADEMIC DETAILS

Completed **B.Tech(ECE)** in Acharya Nagarjuna University from Guntur, 2021

ORGANIZATIONAL EXPERIENCE

Worked as **Systems Engineer** at **Infosys** from November 29, 2021 – November 30, 2022

Worked as **DevOps Engineer** at **Accenture** from December 27, 2022 – April 24, 2024

Worked as **DevOps Engineer** in **PNQ Technologies** from June 3, 2024 – October 21, 2024.

IT SKILLS:

Cloud Platform	AWS, Azure
Container Orchestration	Azure AKS, Kubernetes & Helm charts
Configuration Management	Ansible
Build Tools	Maven
Version Control Tools	GitHub, Git
App & Web Servers	Apache, Tomcat & Nginx
CICD Tool	Jenkins
Infrastructure As Code	Terraform, AWS Cloud Formation
Languages	Python
Scripting	Shell Script Bash
Containerization Tools	Docker
Tracking Tools	Jira, SNOW
Log Management Tool	Splunk
Operating Systems	Ubuntu, Centos, Windows Server & RHEL Linux
Code Quality Tool	SonarQube
Monitoring Tool	Datadog

PROJECTS UNDERTAKEN

PROJECT 1:

Title: Clinic App

Project Description: Clinics app is an android based applications to give Doctors a platform to book appointments and start consultation with latest Diagnosis (ICD 9/ICD 10) codes and prescriptions. It has various lab integrations as well as full EMP (electronic medical recoding platform) features. It has been evolved to web front as well.

Tools Used: Azure, Git, Maven, Ansible, Apache Tomcat, Jenkins, Docker, Kubernetes and Terraform.

Role:-

- Release Engineer for a team that involved different development teams and multiple simultaneous software releases.
- Developed and implemented Software Release Management strategies for various applications according to the Agile process.
- Identity root cause, and resolve problems.
- Maintaining the source code in **GIT** for various applications.
- Administered merge, build and deployment of the codes to all the environments.
- Hands on experience with **Jenkins Build** and Deployment pipelines.
- Setting up Builds with **Azure DevOps** and deploying into Microsoft Azure services
- Worked on implementing **Terraform** modules and remote state management with s3 bucket
- Migrated all environment **Kubernetes** infrastructure having availability set with virtual machines to auto scale set (managed account).
- Hands on experience in creating **Docker file**.
- Responsible for the Plug-in Management, User Management, Build/Deploy Pipeline Setup and End-End Job Setup of all the projects.
- **Jenkins** is used as a Continuous Integration tool for automation of daily process.
- Involved in the release process and deployed applications (**WAR** and **JAR**) to the Tomcat.
- Configuring Traffic manager and application gateway with WAF rules in the project

PROJECT 2

Title: Capital One Bank- US

Project Description: The Capital One Bank is vital source of financial and technical assistance to developing countries around the world. We are not a bank in the ordinary sense but a unique partnership to reduce and support development. At the time holiday session maintain the new

services to the customers based on customer bank operations.

Tools Used :- Azure, Maven, Git, Jenkins, Terraform, Ansible, Docker &

AKS.

Role:-

- Connect by creating a [VNET peering](#) between the AKS VNET and the Cosmos DB private endpoint VNET.
- Created bunch of **Shell scripts** to reduce the manual operations
- Hands on experience with **Jenkins build** and deployment pipelines.
- Experiencing both GitHub and Git
- SonarQube integrated for code quality analysis
- Designed and implemented **Azure DevOps** pipelines for Java project.
- Implemented demands and capabilities in agent pools.
- Setting up Builds with **Azure DevOps** and deploying into Microsoft Azure services.
- Integration SonarQube with Jenkins Pipeline for static code analysis for Java Code.
- SonarQube is used for Code quality analysis and **Nexus for binary management**.
- Configured Jenkins pipelines as a code using groovy script and declarative pipelines.
- Configured **High availability using Pod auto scale and Node auto scale**.
- Stored all the **SSL certificates in azure key vault and integrated with AKS to auto sync** with new updates.
- Upgraded AKS version many times to cop up with Microsoft new releases as MS stopped support for lower version.
- Experienced in writing reusable and modular **Terraform** configurations to define cloud infrastructure as code.
- Proficient in creating and managing cloud resources on Azure using Terraform, including VMs, storage accounts, networking, and AKS clusters.
- Managed and stored Terraform state files in **Azure Blob Storage** for consistent state management across teams.
- Configured **web application firewall** on all the front face application URL.
- Configured tags for all the resources to manage the cost.
- Managed persistent storage volumes in **Kubernetes** for stateful applications requiring data persistence.
- Secured all the application both front end and backup by configured SSL certificates.

PROJECT 3:

Title: View-Point

Project Description: Viewpoint is an online resource/tool for financial professionals worldwide. It consolidates all the financial reports into one place. It covers the financial reporting under IFRS, US GAAP and national GAAP.

Tools Used :- AEM, AZURE, Maven, Git, Jenkins, Terraform, Ansible, Docker ,

Role:-

- Managed and configured Adobe Experience Manager (AEM) for efficient content delivery and system integration.
- Maintained Git branches, handling version control, merging changes, and ensuring code consistency across development and production environments.
- Performed manual deployments across QA, Stage, and Production environments, ensuring smooth transitions and minimal downtime.
- Created and maintained Dockerfiles to build and optimize images for AEM and associated services, enhancing deployment flexibility and reliability.
- Monitored and optimized Jenkins jobs, addressing build issues and improving pipeline performance to support the dynamic needs of financial content management.
- Automated the deployment process of cloud infrastructure using **Terraform Modules** integrated with CI/CD pipelines,
- Used **Git** to manage Terraform configuration files, enabling version tracking and collaborative updates to infrastructure code.
- Integrated **Kubernetes** with **CI/CD pipelines** to automate application deployment processes, including rolling updates and canary deployments.
- Monitored system performance and alerts using OpsGenie and Datadog, identifying root causes of issues and implementing timely solutions.
- Utilized Splunk's search and analysis capabilities to identify patterns and root causes of performance issues, aiding in the resolution of complex problems within the financial reporting system.
- Conducted system restarts and reboots as needed to resolve operational issues and maintain system stability.
- Upgraded Tomcat servers to the latest versions, enhancing performance and security.
- Executed ingestion activities, managing data flow and integration processes to ensure accurate and up-to-date financial content.
- Oversaw content synchronization and syndication activities, ensuring consistent and accurate.
