

Education

Amrita Vishwa Vidyapeetham	Coimbatore,India
Master of Science In Data Science (Integrated)	2020-2025
KVS Matriculation Higher Secondary School	Virudhunagar,India
high School Education	2020

Skills Summary

• Language	Python
• Framework	Pandas, NumPy, Scikit-Learn, TensorFlow, Pytorch, Matplotlib, Keras
• Tools	Power-Bi, Excel, Tableau
• Platform	Visual Studio Code, Jupyter Notebook

Work Experience

AI/ML Technologies Intern Novintix	September 24 - Present
- Collaborated on the development of Proof of Concepts (POC) - Contributed to ideation, design, and execution to demonstrate feasibility and innovation.	
AI Developer Intern PiBi Info Technologies	August 2024 - September 2024
- Focused on integrating AI technologies to enhance product functionality and performance. - Collaborated with technical teams to implement data-driven solutions, optimizing processes and improving user experience. - Contributed to the development and deployment of machine learning models and algorithms to drive intelligent features and automation.	

Projects

Network Intrusion Detection System
Predictive analysis using ML and DL models - Designed and implemented a system to detect network intrusions using Machine Learning (ML) and Deep Learning (DL) models. - Developed models that predict potential network attacks, enhancing security by identifying malicious connections.
Text Classification using Unsupervised Learning
Unsupervised learning for document classification - Built a text classification model using K-means clustering and sentence tokenization techniques to group documents based on similarity. - Identified key patterns and insights without the need for labeled data, automating the classification process.
Intelligent Chatbot Creation
Leveraged natural language processing for user interaction - Developed a chatbot to provide user-centric solutions, integrating Natural Language Processing (NLP) techniques. - Enhanced user experience by improving the chatbot's ability to understand and respond to user queries effectively.
Mental Health Trends Analysis and Visualization
Data analysis and visualization using Python and Power BI - Conducted data pre-processing using Python to analyze mental health trends. - Created interactive visualizations in Power BI, providing insights into mental health patterns and correlations.

Certifications

Supervised Machine Learning: Regression and Classification
DeepLearning.AI, Stanford University – May 2024 - Gained expertise in supervised learning techniques, including regression and classification models, to solve real-world problems. - Applied algorithms like linear regression, logistic regression, and decision trees to build predictive models.
Unsupervised Learning, Recommender Systems, and Reinforcement Learning
DeepLearning.AI – June 2024 - Mastered unsupervised learning techniques such as clustering and dimensionality reduction. - Learned recommender system algorithms and foundational principles of reinforcement learning.
Advanced Learning Algorithms
DeepLearning.AI – June 2024 - Acquired advanced knowledge of machine learning algorithms, including optimization, neural networks, and model tuning techniques. - Focused on improving model performance in complex AI applications.
Natural Language Processing with Attention Models
DeepLearning.AI – April 2024 - Studied natural language processing (NLP) techniques, focusing on attention mechanisms and transformer-based models like BERT and GPT. - Applied these models for tasks such as language translation, sentiment analysis, and question answering.
