Sr. Software Engineer

Contact no: **+919746525489,7406881001** Email: **ss.sruthi28@gmail.com** LinkedIn: [linkedin.com/in/ss-sruthi-t](https://www.linkedin.com/in/ss-sruthi-t)

7+ years of experience in Application Development. Building Microservices, web applications for desktop and mobile devices. Designing Restful APIs.

PROFESSIONAL SUMMARY

- Product **Requirement Specifications and gathering.**
 - **Agile Methodology, Technical, Functional** documentations.
 - Good knowledge of **Object-Oriented programming.**
 - Experience in implementing **Microservice** architecture using **Spring boot and NodeJS.**
 - Good Knowledge in **HTML5, CSS, JavaScript.**
 - Designing of **Restful APIs, Rest templates.**
 - Proficiency in SQL and NoSQL databases.
 - **(CICD)** Continues Integration and Continuous Deployment of services using **Jenkins.**
 - Version control: **Git**
-

TECHNICAL SKILLS

- **Backend technologies:** Java Spring Boot, NodeJS, PHP.
 - **Web technologies:** HTML5, CSS, Bootstrap, JavaScript, Typescript
 - **Front end frameworks/Plugins:** Angular (basics), jQuery, typescript
 - **Database/ Relation Models:** MySQL, PostgreSQL, MongoDB, Hibernate, JPA.
 - **Build Tools:** Maven, Cordova.
 - **Version Control/CICD:** Git, Jenkins.

EXPERIENCE AND PROJECTS

QUINTA SYSTEMS PVT LTD 2018,June– Present

PROJECT: QugoTravels(qugo.io)

The travel booking project is a centralized platform for users to effortlessly plan and book their travel arrangements, especially for corporate employees. Our platform covered three main areas: hotel reservations, flight bookings, and vacation packages

For hotel bookings, we designed a user-friendly interface that allowed users to search for accommodations based on their preferences such as location, price range, and amenities. We integrated with external hotel APIs to fetch real-time data on room availability, pricing, and descriptions.

Similarly, for flight bookings, we implemented a feature-rich module that enabled users to search for flights based on their departure and arrival destinations, dates, and preferred airlines. Integration with external flight APIs facilitated the retrieval of up-to-date flight schedules, prices, and seat availability. In addition to individual bookings, we offered users the convenience of booking vacation packages, which bundled together flights, hotels, and sometimes other amenities like tours or car rentals. This required intricate logic to combine various offerings into cohesive packages that met users' preferences and budget constraints.

A key aspect of the project was the integration of external API providers for both flight and hotel data. By leveraging these APIs, we ensured that our platform always had access to the latest information, guaranteeing accurate and reliable bookings for our users.

Technologies: Java Spring Boot and NodeJS for microservices, nextjs for frontend, MongoDB, MariaDB

Roles and Responsibilities: I was part of requirement gathering, Architecture and database design .

Backend development: Involved in developing backend microservices(API gateway, eureka service, jwt ,external APIs integration for real time data ,payment gateway integration etc.) using Java spring boot and node js.

PROJECT: Qugometa

It's a food ordering android and ios app. We can order food from the restaurants on boarded in the app and delivery is also available. The app is supporting both delivery and take away option and is available in playstore. The speciality of the qugometa app is that it is assuring you that menu price will be the same as the restaurant price.

Technologies: java spring boot for microservices, flutter, postgresSQL, MariaDB

Roles and Responsibilities: I was part of requirement gathering , Architecture and database design

Back end development: Involved in developing backend microservices in Java spring boot, Keycloak implementation, rabbitmq, api gateway, eureka service

PROJECT: QIOSK 1.0(SOK-Self Ordering Kiosk)

Core objective of SOK is to engage customer's at Point of Service to self-order the items without cashier intervention and burst the queue at the billing counter in Quick Service Restaurants (QSR) or Food Courts (FC) where large customer crowd at the billing counter during peak billing time. This helps retailers to burst the queue without much employing the man power that saves several lakhs of rupees and speed up the billing cycle through self-order what customer wants to select then pay through plastic card or wallets as the case may be.

Cash is not part of this solution as cash handling & balance dispensing is cumbersome in the qiosk solution.

Technologies: Java Spring Boot Microservices, Apache cordova, Angular 8, PostgreSQL, Rabbit MQ, Maven, Rest Webservices, JavaScript, typescript.

Roles and Responsibilities

- Involved requirement gathering and scope freezing from technical panel.
- Backend: Involved in development of Order service, RabbitMQ, Management Service, Kot Service and Pos Provider Service, which is the core of the product.
- Frontend: Developed Hybrid app using apache cordova and typescript.
- Payment gateway integration with Qiosk.

- Integrated KOT with Qiosk(windows app).
- KDS(Kitchen display system) developed using cordova and typescript.

PROJECT:QuGo

Its a digital food ordering app for restaurants , By scanning the qr code placed in the restaurant customers can login to the app, add items to cart and place the order . Growing concern over COVID-19 has restaurants around the world closing their doors to protect the health of their customers, employees, and communities. To help restaurant owners stay afloat during this difficult time, we developed qugo. Without having any kind of contacts restaurant can serve their customers.

Technologies: Java Spring Boot Microservices, Apache cordova, Angular 8, PostgreSQL, Rabbit MQ, Maven, Rest Webservices, JavaScript, typescript.

Roles and Responsibilities

- Was a part of requirement gathering Database design.
- Backend: Involved in development of Order service, Admin Service, Kot Service and Pos Provider Service, which is the core of the product.
- Integrated KOT to MerchatApp(Order display app in kitchen).

CTK SOFT

2016,FEB – 2018,JUN

PROJECT: RETAIL ERP SYSTEM(Prasiddhi Silks)

System is to provide one central repository for all information that is shared by all the various ERP facets to improve the flow of data across the organization. The objective of this project is to control each and every activity of Prasiddhi silks. The main modules includes,

- Vendor
- Purchase Order
- Posted Purchase Order
- Stock Transfer
- Receive Stock
- POS(Point of Sale)
- Return Order
- Stock
- Tax(GST)
- Wholesale
- Finance
- Cash transfer
- Reports

Technologies: PHP, PostgreSQL, JavaScript, CodeIgniter framework.

Roles and Responsibilities

- Was a part of requirement gathering, Database design.
- Development of Purchase Oder, Posted Purchase Order and POS
- GST Implementation
- Printer integration and barcode generation.
