

Sumanth MS

Azure Data Engineer

Dedicated and results-driven Azure Data Engineer with over 2.11 years of hands-on experience designing, implementing, and optimizing scalable data solutions on the Microsoft Azure platform. Proficient in writing SQL queries, PySpark, ETL processes, Azure Search, and Azure Event Hubs. Adept at collaborating with cross-functional teams to implement innovative solutions that align with business objectives. I seek to leverage my expertise to contribute to the success of a dynamic organization.

WORK EXPERIENCE

Mphasis Associate Software Engineer

01/2022 - 11/2024

india

Project :Banking Domain

Roles and Responsibility

- Implemented processes for Data acquisition, storage, transformation and retrieval from various sources, ensuring data quality and integrity.
- Developed and implemented automated processes for Data extraction, transformation, and loading (ETL), reducing manual intervention and enhancing reliability via leading practice on data pipeline orchestration using skills like Azure Data Lake, Databricks, Azure Data Factory, SQL, PySpark and Python
- Took leadership on Usecase and using data vault modeling built Datamart as per Business logic. Experienced in implementing historical and incremental data load using Azure Data Factory
- Document Data Engineering processes and maintain accurate records of data workflow
- Performed User Acceptance Testing (UAT) smoke tests for Azure Data Factory, ensuring the reliability and functionality of data pipelines.
- Monitoring the data pipelines to ensure reliability and performance, validating the pipeline runs results

BANKING PROJECT DATA TRANSFORMATION :

The stored data undergoes a comprehensive transformation process in Azure Databricks spanning three crucial stages: skills used like Azure Data Lake, Databricks, Azure Data Factory, SQL, PySpark and Python. (06/2022 - 11/2024)

- Raw zone :Data Acquisition, Reconciliation , Error Handling: A new Collection is added in the source /Raw and Bulk Updates in the source .All the data from Oracle Golden gate ,SHIR and SSIS are Added to this Layer
- Cleansed zone: Transform, Reconciliation , Error Handling: In this layer we will remove duplicates Converting data into a common format and apply simple and complex data quality rules and validation ,cleaning data :remove out of range data ,replace junk ,replace/substitute text data
- Curated zone: Business Logic DataMart. The business Vault layer modeled using hub, links, and satellites will have the business rules

EDUCATION

Bachelor of Engineering in Electrical and Electronics Engineering KVG College Of Engineering, 2017-2021

03/2017 - 07/2021

ACHIEVEMENTS

Spot On Award (12/2022)

Received the Spot On award for developing an automated solution for historical data processing, significantly improving efficiency and accuracy

Client and Stakeholder Impact (06/2023)

Consistently delivered timely and high-quality data solutions, resulting in a 95% client satisfaction rate.
