

SUNIL KUMAR N

DATA SCIENTIST

[linked in profile](#)[git hub profile](#)

+91 6281457922

Hyderabad,Telangana

nsunilkumar.ai@gmail.com

Summary

- Trained and an accomplished Professional data scientist with a strong foundation in data analysis, predictive modeling, and data-driven strategy development.
- Proven track record of extracting actionable insights from complex datasets and implementing data-driven solutions to solve real-world business problems.
- Proficient in programming languages such as Python and experienced in data manipulation using Pandas, numpy and SQL.

Experience

Data analyst Virtual Intern at Trainity

FEB 2024 - MAY 2024

- Worked on wide and real time large datasets, cleaning and processing and finding patterns in between each features and insights from previous data.
- Hands on live projects, by uinsg advanced Excel, Statistics & Probabilty, Python, Pandas, numpy, visualization with matplotlib lib, Tableau, and SQL.
- Involved in different Industry data sets, Includes Socila Media, Health Care, Operational and Financial fields.

Education

- | | |
|---|----------------------------|
| ◆ Bachelor of Science in Cse (AI&ML)
S't Mary's Group of Institutions Hyderabad
Hyderabad | 2020 - 2024
CGPA: 6.65 |
| ◆ Intermediate in Maths,Physics,Chemistry (MPC)
Sri Sai Prathibha Junior College
Pathikonda | 2018 - 2020
CGPA : 6.66 |
| ◆ Secondary School Education (SSC)
Z.P High School
Edduladoddi | 2018
CGPA : 9.70 |

Skills Summary

- Developed and deployed machine learning models based on client requirement.
- Collaborated cross-functionally with to understand their data needs and provided data-driven recommendations that enhanced decision-making processes.
- Utilized data visualization tools (matplotlib, seaborn with python and Power BI) to create informative dashboards and reports for stakeholders, resulting in improved data accessibility and comprehension.
- Participated in data pipeline development and data engineering tasks to ensure data quality and availability for analysis.

Technical Stack

- Python Programming
- Pandas, #Data Analysis
- Matplotlib, Seaborn, plotly #Data Visualization
- Seaborn, scikit - learn, #Machine Learning
- Probabilty, Statistics
- Chat Gpt, LLM
- Tensorflow, Keras, #Deep Learning
- Predictive Model Creation
- nltk, spacy, textbolb, #NLP
- SQL, #mysql
- Excel, Power BI, Tableau
- Computer vision #cv

Personal Stack

- Excellent Communication Skills
- Logical thinking
- Problem Solving
- Team work
- Adaptability
- client engagement

Projects

Project - 1 Name : Gender Prediction for Social Media User Profiling.

Technical Environment : Python, numpy, pandas, matplotlib, seaborn,scipy,scikit- learn

Research on Gender Prediction for Social Media User Profiling involves applying different techniques to analyze and gain insights from Social Media data. These methods plays a crucial role Understand Gender Behaviour, improving User Profiling, and understanding different gender sentiments and categorize them with users.

- Used to access the datasets and converting raw text into tokens to improve model efficiency and performance.
- Clean and pre-process data to remove noise, handle missing values, and ensure data quality.
- Conduct EDA for better understanding the data's structure and identify patterns, trends, and outliers.
- Create visualizations and reports to understand the correlation between each feature.
- Engineer new features from raw data to improve model performance and predictive accuracy.
- Select right model specific business problems, train, validate, and fine-tune models using data to achieve desired performance metrics. Evaluate model performance using relevant metrics. Validate models for generalization and robustness.
- Enhancing data collection procedures to include information that is relevant for building analytic systems.

Project - 2 Name :	Drug Recommendation System
Technical Environment :	Python, numpy, pandas, matplotlib, seaborn,scipy,scikit- learn and NLP

DRUG Recommendation System Based on Sentiment Analysis of DRUG Reviews involves applying different techniques to analyze and gain insights from Existed Drug Reviews data. and these methods plays a crucial role in finding Drugs for complicated and common diseases, and improving Patient Intereaction with medical terms and medicines, and understanding different Best Drugs for different diseases and helps like a doctor in an emergency situation

- got to access the datasets and converting raw text into tokens by using nlp library to make raw text as simplified data to model
- Clean and pre-process data to remove stop words and symbols, to handle missing values, and to form a quality array
- Conduct EDA for better understanding the data's structure and identify patterns, trends, and frequent terms.
- Create TF - IDF algorithm and convert text into a vector array to feed model with features
- Select right model specific Disease Drug, train, validate, and fine-tune models using data to achieve desired performance metrics. Evaluate model performance using relevant metrics, and visualizing all models and compare them
- prompting end users to understand every drug and its reviews to take best medicine among different drugs.

Languages

- | | | |
|-----------|---|------|
| • English | - | 99% |
| • Telugu | - | 100% |
| • Hindi | - | 50% |
| • Spanish | - | 25% |
