C++ developer with experience in modern C++ (11/14/17), socket programming, multithreading, Object-oriented programming and design patterns, containers, STL and data structures and algorithms. Seeking to leverage analytical thinking and problem-solving skills to contribute to innovative solutions within a dynamic team as a C++ developer.

Professional Experience

Mobile Robotics Intern, *Addverb Technologies Limited* Feb 2023 – Aug 2023 | Noida, India

- Used C++ to configure robot communication and integrate it with software, implementing a client-server architecture, mainly focusing on the server component.
- Ensured smooth server-client communication for robots implementing TCP socket programming and facilitated data transfer via RESTful APIs.
- Implemented testing and evaluation procedures of third party robots' performance within a warehouse environment, by modifying the fleet manager using C++, incorporating multithreading for multiple client robots. Effectively pinpointed and resolved issues to enhance the functionality and efficiency of over 30 robots in fleet's operations.
- Collaborated with a diverse team that deployed 125 robots in a client warehouse, ensuring seamless integration and operational efficiency. Identified and resolved issues during User Acceptance Testing to ensure optimal operation.

Skills

C++ (11/14/17) | Python | OOPs | Multithreading | Socket programming | IPC | Linux |
Shell Scripting | Bash | MySQL | MongoDB | CMake | Git | STL | GDB | Valgrind | Docker

Projects

Weaver, *A multithreaded C++ webserver*

- Designed and implemented a multithreaded web server in C++ to handle multiple client for transmission and reception of data simultaneously.
- Implemented socket programming(IPC), and synchronization mechanism like locks and multithreading to ensure safe access to shared resources and maintain client-server/peer-to-peer communication using TCP/IP.
- Can be utilized as a microservice for large distributed systems or data transfer mechanisms, enabling efficient communication between multiple clients and a central server via socket connections. [Github](#) 

Simplify, *A C++ library*

- Developed a comprehensive C++ library 'simplify' with implementations of various complex data structures, incorporating essential algorithms and operations for each data structure. [Github](#) 

Real-time Chat Web App, *MERN stack* 

- Designed and implemented a fully functional chat application using MongoDB, Express.js, React.js, Node.js, incorporating WebSockets for instant messaging, JWT for secure user authentication, and full CRUD operations for user and message management.
- Designed responsive UI for login, signup, and chat pages for real-time communication, ensuring an enhanced and visually appealing user experience. [Github](#) 

Education

Rajarshi Shahu College of Engineering, Pune

2019 – 2023

B.Tech. in Electronics and Telecommunications. CGPA: 8.3/10.0

Relevant subjects during the course: Python Programming, Data Structures and Algorithms with C++, OOPs, Software Engineering and Project Management, and Computer Networks. 

Courses and Certificates

- Certified in C/C++ programming through Spoken Tutorial.
- Completed MATLAB ONRAMP course covering basic programming, mathematics, and graph usage. 
- Attained expertise in Data Structures and Algorithms through a course provided by GeeksForGeeks.
